NOTICE.

GENTLEMEN:—On and after March 1st, the business heretofore conducted by me will be continued by a Company, to be known as

The Estey Wire Works Company.

Thanking you for favors received in the past, I bespeak a continuance of your patronage under the new organization and trust that the same pleasant relations existing between us may be continued.

Yours truly,
W. S. ESTEY.

As above announced we have succeeded to the business of W. S. ESTEY, and trust that we will merit a continuance of your valued orders as heretofore extended to Mr. W. S. Estey.

Yours truly,

ORANGE SPORTING POWDER, MANUFACTURED BY LAFLIN & RAND POWDER CO.

ORANGE RIFLE EXTRA, ORANGE SPECIAL, ORANGE DUCKING, ORANGE LIGHTNING.

The attention of TRAP AND FIELD SHOOTERS, RIFLEMEN AND DEALERS IN GUNPOWDER, is called to the new ORANGE SPORTING POWDER, patented April 17th, 1888, and branded ORANGE RIFLE EXTRA.

This Powder is quick and strong, and burns with such perfect combustion that the only residum left in the barrel after shooting is a dark oily substance easily removed While this Powder is not exactly SMOKELESS, it gives only a light bluish smoke, which is almost instantly dissipated, and interferes but little with the shooting of the second barrel, taking the place of the so-called smokeless powders in this respect.

This brand of powder sells at the same price as any other brand of Rifle Powder and is superior to any made. No person who shoots can afford not to give it a trial, as after once trying it he will never use any other Powder when he can obtain the ORANGE EXTRA. Weight and quality guaranteed.

MILITARY, MINING AND BLASTING POWDER.

LAFLIN & RAND POWDER CO., - 99 Cedar Street, New York City.

PLACE THE MATTER CLEARLY.

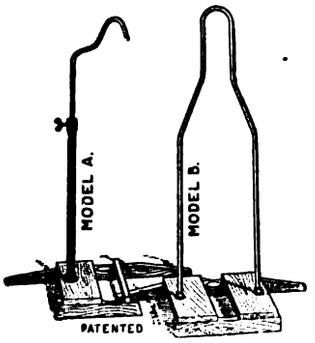
To make a man realize an idea as you realize it, is what is necessary to make him understand his needs. Advertisements should aim to place a matter so clearly before the public that they see it as clearly as the advertiser does.

Digitized by Google

IT TAKES A PULL

to separate the plies of our rubber belting. A yoke of oxen can do it, but hard service won't, so strong is the friction. Our belting is uniform in width and thickness, consequently more of its surface comes in contact with a pulley. That means

NO WASTE OF POWER.



Rubber belting is never injured by water, hence it is best for out-door use, for wet localities, and for mills where the atmosphere is surcharged with moisture or steam, as in paper mills, tanneries, etc. Buy the durable kind, branded 1846-Para, Double Diamond or Carbon, made for 50 years by the

100%

The above figure represents the increase in the sales of the

Cream City Flour Bin

during the first four months of 1895 over those made in the corresponding time in 1894.

They are not as cheap as other similar devices, but they are so much better, that the people will buy them. An article that has merit, and is sold at a reasonable price, should commend itself to the attention of progressive dealers.

J. BARDSLEY,
149 Baxter St., NEW YORK.

The AMERICAN WICK is made on scientific principles. The gum inherent in the natural cotton is taken out, and no expense is spared to produce a wick that will give THE GREATEST ILLUMINATION.

THE
AMERICAN WICK
Made by the
WICK DEPARTMENT
Of the STANDARD OIL CO. of NEW YORK.

Oil drawn up through the AMERICAN WICK burns with a large, clear, white light and the flame does not drop off in size as it does when a poor wick is used. When the cotton is clogged with its natural dust and gum the full illuminating power of the oil is not obtained and the complaint is heard that the light DROPS.

The Automatic Refrigerator

has more good points and does better work than any other, and for that reason is a better seller. Our illustrated catalogue for 1895 tells all about the line. Its advantages are:

Perfect circulation.
Large condensing and purifying capacity.
It has no flues to cause it to smell bad.
The trap is inside where it cannot be misplaced or lost.
The drip pipe may be cleaned without disturbing anything in either chamber, and is entirely out o the way.
It has nine walls to protect the ice and to maintain a uniform temperature in the cooling chamber.
It has woven wire provision shelves that are superior.
It has superior hardware.
It is more capacious and convenient.
Flavors of foods will not mix.
Last but not least, it's different, and will bring new customers and new trade.
We want the leading dealers to handle our goods and but one dealer in a place.
The goods are made of ash, and well finished.

Southern Jobbers in Louisville.

The Southern Hardware Jobbers' Association will meet in annual convention at Louisville, Ky., on Tuesday, Wednesday and Thursday of the present week. So far as can be judged from present indications, the attendance will be large, and the interest shown in the gathering at Richmond last year fully sustained. It may seem a little close to the summer heat to make prospects for travel and hotel life pleasant, but the generous hospitality of Louisville is such as to overcome that objection, and make the prospect so attractive that the objection may have no weight. A programme of exceptional interest has been arranged, and the presence of a large number of manufacturs will add zest to the occasion, and bring that class and the jobbers into closer and more harmonious relations. This association is one of the oldest and most prominent of the many now found within the Hardware trade, and anything it does is of interest to the trade at large.

The Situation.

We have reached the table land where one can survey the trade for this season, and speculate on the possibilities of the future in the sunshine ahead. It is too early to expect such results as full crops, but the seed is being carefully planted just the same, and as the season progresses towards its culminating point, we shall have some hungry buyers looking for the supplies which in many cases will "breathe the word of promise to the ear" only. The larger jobbers are beginning to realize that many of the goods usually made up ahead by manufacturers in flush times, are scarce to-day; with many manufacturers disinclined to book orders, for such lines and nothing else, because the competing prices on the same approach too close to the border land of "no profit."

There are few jobbers but are willing to order as many of such goods as would suffice for a season's ordinary wants, at the present low prices prevailing, and while these close profit goods are being made up in limited quantities, and delivered on orders to customers who handle a manufacturer's regular and complete line, orders from outside parties, who are not usually found among his patrons, are looked at askance and declined with thanks; because it may well be believed, no factory can run with any degree of satisfaction, on a scale of profit possible, on the line of low-priced goods, invariably found in the fore-front of a competitors' quotations.

English Hardware Organizations.

The English Hardwaremen seem to have a great deal of difficulty in getting together. They have been discussing the question of organization ever since their American brethren demonstrated what could be done in that direction, and have made several attempts to follow the admirable example thus set. The journals devoted to the trade upon their side of the sea, have time and again urged them on to action. A recent number of the *Hardwareman*, of Birmingham and London, reverts to the subject in these words: "On the present occasion we propose to sink for the moment our individual opinion and to ask our readers to listen to a different voice—not the voice of persuasion or argument, but the voice of experience. What direct advantages can accrue from the formation of a local association? This, with one slight modification, is the question which has been put by our New York contemporary, HARDWARE, to the leading associations in the United States. The precise question asked was an even better test; it was—'What benefits *have accrued* to the trade through your Association?' The answers then are not matters of conjecture, or matters of possibility; they are matters of actual fact, and that is why we pause in our own exhortations to let these facts speak for themselves." This is followed by quotations from the reports from the various associations, as found in the recent anniversary number of HARDWARE. In the opinion of our esteemed English contemporary, that which has been done upon one side of the sea can be done upon the other. Why not?

When one American-built steamer, carrying the American flag, creates the excitement that attended the *St. Louis* on her initial trip, what will be the condition of the American mind when our commerce upon the seas once more assumes its old-time importance? When the seas are once more dotted with American merchantmen, sailing under the Stars and Stripes? That desired time seems close at hand.

Parson Haines to the Travelers.

Parson Sam Haines was in St. Paul, Minn., on Sunday, May 26th, and occupied the pulpit of the People's Church, where he preached a pointed and eloquent sermon to commercial travelers, from the text: "Command that these stones be made bread." A brief extract, covering his conclusion, is taken from the full report found in the St. Paul *Globe:*

Find the number of men in this land who hold truth, honor, integrity and manliness dearer than life, and you have the physical as well as the moral force of the land, and the men who, by God's blessing, will save the land in its hour of need. Life, yours or mine, is worth just the truth and honor, the faith and valor, it holds for God's service and man's. Stand on the bridge (as I have) some night in "half a gale," when the ocean greyhound roars through the Atlantic and sends the salt spray above to her main top; sit in the engine cab when the locomotive thunders through the darkness of a wild winter night—and in the sailor pacing the bridge with you, or in the stalwart, clear-eyed engineer standing by you, you will find the types of human activities that the men of right blood recognize as manly. Rough Christians, both of them. Yes, but they both believe. When the crash comes of a collision in mid-Atlantic and the great racer has plowed her way through a sinking ship, and the order is "Boats away," or when the locomotive sways and rocks upon a track washed out, they both believe (and they stand upon the reeling deck and rushing engine) in that faith, "Man doth not live by bread alone," and they will each die that other men may live.

Some day we will carry on our business in the same heroic fashion, believing in God, who rules the world and rolls the ages on. I believe the day is coming when we shall recognize ourselves, all of us, as the sons of God, our lives in our hands for the weak, the falling, the ignorant. When chivalrous generosity shall run the shop, factory, bank. When this spirit shall permeate the whole brotherhood of commercial travelers; when we shall recognize the fatherhood of God and a common brotherhood of man.

Then let us take courage. We dare not fail. We must learn to stand fast. We do not "live by bread alone."

Good Reports from Cleveland.

A reporter has been among the Hardwaremen of Cleveland investigating the condition of trade, with the following result: H. W. Luetkemeyer, of Luetkemeyer & Sons, says that for the past five or six weeks business has been very active. "The recent frosts forced the canceling of quite a number of large orders from the surrounding country. However, it is not expected that the frost will tend to materially affect future trade. Both the retail and wholesale trade has been fair, and prices are better than last year. Everything considered, trade this season has been far better than was anticipated."

President McIntosh, of the McIntosh-Huntington Co., said: "Trade has been very brisk with us. It is the best season we have had since 1892, and our only wish is that it will continue. There is a steady advance in prices, and I believe there will soon be a general recovery from the crisis in all branches of trade. The demand is greater than we expected."

W. S. Blossom, of the Wm. Bingham Co., said: "There is a big demand for goods, and we are pushed to fill orders. Business during April was much larger than in the same month last year, and what makes it all the better is the stiff prices we are getting for the goods, owing to the advance made by the manufacturers."

President C. B. Lockwood, of the Lockwood-Taylor Co., said: "I feel that the backbone of the hard times has been broken, at least as far as our line is concerned. This season's sales have far exceeded our fondest expectations. They are much larger than last year's. The recent advance in steel and the raising of wages in the factories have forced the prevailing stiff prices, but the demand for goods has not abated. We have our hands full to fill the orders."

A Mid-Summer Shoot.

The very handsome advance announcements of the J. F. Schmelzer & Son Arms Co., Mid-Summer Shooting Tournament, to be held at Fairmount Park, Kansas City, Mo., Tuesday, Wednesday, Thursday and Friday, July 16th, 17th, 18th and 19th, have been distributed. The programme is as follows:

First day: No. 1, Quackenbush Event. No. 2, Spencer Gun Event. No. 3, Parker Gun Event. No. 4, Baker Gun Co. Event. No. 5, Continental Shot-Tower Co. Event.

Second day: No. 6, Hazard Powder Co. Event. No. 7, Hunter Arms Co. Event. No. 8, D. Kidney & Son Event. No. 9, Winchester Repeating Arms Co. Event. No. 10, Lefever Arms Co. Event.

Special event, open to the world: Fairmount Park Event. J. F. Schmelzer & Sons' World's Championship Trophy Event.

Third day: No. 11, DuPont Powder Co. Event. No. 12, Burgess Gun Event. No. 13, Syracuse Arms Co. Event. No. 14, Reporter Publishing Co. Event. No. 15, Peoria Target Co. Event.

Fourth day: No. 16, Bridgeport Gun Implement Co. Event. No. 17, Marlin Fire Arms Co. Event. No. 18, Cleveland Target Co. Event. No. 19, H. J. Upthegrove Event. No. 20, J. F. Schmelzer & Sons Arms Co. Event.

Three handsome and appropriate prizes will be awarded in each event.

Combination Cycle Co.

The following notice carries its own explanation:

The partnership heretofore existing between Russell J. Straight, of Bradford, Pa., and Daniel H. Dorsett, of Jamestown, N. Y., and doing business under the name of the Cyclone Combination Cycle Co., at Jamestown, N. Y., and at No. 309 Broadway, New York City, is this day dissolved by mutual consent. The books of the firm will remain with the Combination Cycle Co., at No. 21 West Second Street, Jamestown, N. Y., and D. H. Dorsett will sign in liquidation.

R. J. STRAIGHT,
D. H. DORSETT.

Jamestown, May 1, 1895.

The Combination Cycle Co. (incorporated) has this day succeeded the above mentioned firm in the manufacture of the Dorsett bicycles and tricycles, with general offices at No. 21 West Second Street, Jamestown, N. Y. All communications relating to the business of the company should be sent to the above address. A new price list of the products of the company has been adopted, and all former lists are void. All checks should be made payable to the Combination Cycle Co. The officers of the Combination Cycle Co. are: Russell J. Straight, president; Daniel H. Dorsett, vice-president; William H. Bentley, treasurer and manager. Capital stock, $150,000.

Jamestown, N. Y., May 1, 1895.

The Withington & Cooley Mfg. Co., Jackson, Mich., have broken ground for a new building, 140x60 feet, to be erected south of the present plant on North Mechanic Street. It will be one story and equipped with the full machinery for the manufacture of hoes, rakes, forks, handles, etc.

The June calendar card of the Jos. Dixon Crucible Co. shows a lone fisherman devoting his holiday to practical uses, and contains this quotation from Henry James: "Not much talk—a sweet silence." There also seems to be a scarcity of fish.

THE SOUTHERN ASSOCIATION AT LOUISVILLE.

A. D. Langstaff, president of the Southern Hardware Jobbers' Association, has issued a circular letter to the members thereof concerning the coming meeting in Louisville, in which among other things he says:

The business to be brought before the Convention at Louisville, June 11th, 12th and 13th, will consist in part of a review of the operations of the various plans formulated at Richmond; to determine what plans have been successful in their application; to ascertain to what extent the members of the Association have been benefited; to determine which plans have been found impracticable and the causes of the failure of the latter. There is no doubt but that by reason of the valuable papers read at the Richmond convention, and the discussions that ensued, members have been benefited.

The methods of business have been improved as to the time on which goods are sold. Some houses have succeeded without loss of trade in reducing the previous prevailing time which had sometimes been four, six or eight months to two months. It does not require a financier to determine the almost incalculable benefit derived from this reduction of time. The extent of the application of shorter time is entirely dependent upon the earnestness of each member endeavoring to adopt it. In this effort he is not only benefiting himself, but by his co-operation he makes the general adoption of shorter time much easier.

Similar co-operative action since the Convention has reduced the then growing tendency to not charge for package and drayage. If decided action had not been taken at the Richmond convention on this subject, followed by strenuous efforts on the part of the members to charge for package and drayage, one-half of our customers—simply because it was becoming a custom—would now be refusing to pay package and drayage. Have you considered what your losses would amount to if no charge was made for package and drayage?

The reading of papers at the Richmond convention upon the most complex question, "Payment of Salaries to Traveling Salesmen," has undoubtedly resulted in a more thorough understanding by the members and by the salesmen of the opportunities presented to the salesman of making profits for his house and in this way making himself valuable; has relegated to the rear or reduced the salaries of those salesmen whose efforts had been to make large sales without that attention to profit making which is now essential to his retention.

The suggestions made by members in their able papers, "Credits and their Applications," have been productive of greater watchfulness and consequently decreased losses.

The friendships established at Richmond between members who reside in adjoining cities, but who had not previous thereto known each other personally, supplemented by the very interesting papers read on "Local Associations," have been productive of kindlier feelings and increased respect for the business ability of each other.

The peculiar conditions of trade that have prevailed during the past two years prevented some of the other plans from being operative. Even under encouraging conditions we could not expect to harmonize in one season the interests of manufacturers and jobbers who had for years been antagonistic to each other. I trust that the members do not feel discouraged because all plans were not successful. The manufacturers are anxious to have another conference, in the hope that plans may be devised that will yield to them and the distributors of their products a reasonable profit. The possible result is certainly worthy of another effort. Hence manufacturers have been invited to the conference at Louisville and will no doubt be present.

To provide that this conference should be fully comprehended by you it is essential that you should be represented. I do hope you will so appreciate the opportunities of the Convention that you will, if necessary, set aside any preventing obstacle and be present. I have not referred in this letter to combinations on prices as a part of the business of the Convention to be held at Louisville. The main purpose of the Convention should be to have a business conference, at which business talks (not necessarily speeches) may occur, so that we may feel strengthened and encouraged to endeavor to more extensively adopt the improved business methods that were suggested at Richmond or that may be suggested at Louisville.

I will in a day or two present to each member a subject for his acceptance upon which at Louisville, as at Richmond, he can take an individual interest in the Convention.

I have to-day received additional advices that the manufacturers will attend, and will be accompanied by their wives and daughters. I assume you will be accompanied by ladies. Reduced rates of $2.50 per day have been offered by the Galt House. This does not include rooms with baths, the charge of which will be $3.50 to $5 per day.

The management of the Galt House having invited the Association to make headquarters there, I have concluded to accept same where members and visitors will be registered in S, H, J, A register and receive S, H, J, A ribbons, which will be in charge of our honorary member, Mr. Irby Bennett.

Street cars are run between every depot and hotel in Louisville.

Chairman of Arrangements Committee, Captain C. F. Huhlein, advises: "We already have arrangements under way here to make the meeting in this city as pleasant as possible for all concerned." The Convention will hold sessions in Board of Trade Hall, two blocks east of the Galt House.

A. D. LANGSTAFF, President.

The programme arranged for this meeting is as follows:

Tuesday A.M.—Meeting of Executive Committee; opening of Convention.

Tuesday P.M.—Business session.

Tuesday evening.—Steamer excursion.

Wednesday A.M.—Business session.

Wednesday P.M.—Carriage drive to points of interest.

Thursday A.M.—Business session.

Thursday P.M.—Business session.

Those who know anything of Southern hospitality need not be told that the Hardwaremen and those of allied trades in Louisville will do everything in their power to make the stay one of pleasure. Business of each day's session will be largely attended to in the forenoon, while the afternoons will be devoted to recreation and the making and renewing of acquaintances. The excursion and carriage drive above noted are to be supplemented by a visit to the Mammoth Cave, via the Louisville & Nashville Railroad, the managers of which have extended an invitation to the Association to become their guests upon that occasion. The indications are that a large number of ladies will be present.

WHAT LOUISVILLE SAYS.

Word was received here this morning that the Southern Hardware Association would accept Louisville's invitation to hold its next annual meeting in this city. The Louisville Hardwaremen have been working hard to secure this meeting, and feel more than gratified with the result. Pittsburg has also been working with this end in view, and our being able

Digitized by Google

to secure it with this obstacle in the way seems particularly fortunate, as Pittsburg is known to have a good hold on the iron men. Invitations were sent the Association by the Board of Trade and the Commercial Club, and the members of the organization in this city brought what influence they had to bear. The meeting of the Association will be held June 11th, 12th and 13th. The visitors will be entertained while here. The Southern Hardware Association is composed of the representative business men in the South. It is thought there will be at least five hundred or more visiting members of the Association at the coming meeting.—*Louisville Post.*

"Hop's" Corner.

The other day as Charley Naylor and myself sat taking our lunch at Hollender's, the butter being in a melting mood causing the reflection, I said: "The butter seems to have a trying time of it this hot weather!"

"I don't think," he replied, "that the butter should grow yellow with jealousy on that account, for even the lard has a much more 'trying' time of it at all seasons of the year." Score one for Charles.

Talking of Hollender's: Last year, when the City Hall had Mayor Gilroy in the forecastle, and the Emerald Isle furnished a large proportion of the crew, one of the lesser luminaries was entertaining at the lunch counter a relative from the "old dart," and was explaining that among other restaurants Hollender's stood pre-eminent for the many things it furnished under the head of "imported." Said he: "They sell more imported lager beer than all the other places put together, and you can have a sandwich made with imported Westphalia ham; or of imported Swiss or Rochfort cheese; or you can have Frankfurters and sauer kraut with both the ingredients made on the borders of the Rhine." He mentioned other toothsome dishes which owed their importance and increased value to the fact they were born "abroad." Finally, reaching the dessert portion of their lunch, he asked his friend what he would have in the way of pastry, and cranberry pie being mutually agreed upon, John the lunchman, looking toward the entertainer with a look in which "cheese" was the interrogation point, asked simply "Swiss or American?"

"For heaven's sake!" said our recent arrival, with his eyes open with astonishment, "are the *pies* imported too?"

The following announcement is made under date of June 1st:

You are hereby notified that the partnership between George H. Scranton and Frank T. Lee, both of New Haven, Conn., doing business as Scranton & Co., has this day been dissolved, the interest therein of Mr. Lee having been transferred to Mr. Scranton, who will pay all debts, and to whom all accounts are payable.

G. H. SCRANTON.
FRANK T. LEE.

The business will be continued by me under the name of Scranton & Co. G. H. SCRANTON.

New Haven, June 1, 1895.

The Triennial Mechanics' Fair, to be held in Boston, in October and November this year, is already filling up with a superior class of mechanical, art and manufacturing exhibits. Space is not charged for, and those who want it will do well to apply soon.

The Consolidated Wire & Nail Co., operating mills at Lockport, Joliet, St. Louis, Allentown and Pittsburg, notified the employees that wages would be advanced ten per cent. on June 1st.

The Mississippi & Missouri Valley Hardware Association will hold an annual meeting at Lake Minnetonka, Minn., on July 9th.

The Simmons Removal.

The St. Louis *Republic* of June 1st has the following: The Anderson-Wade Realty Co. yesterday made one of the most important leases of the season. They leased to the Simmons Hardware Co., for ten years, the premises at Nos. 210 and 212 North Broadway, now occupied by the Peter Nicholson & Sons Grocer Co. The amount of the lease charges, while not stated exactly, will range from $14,000 to $18,000 a year for the term of ten years. The premises consist of a new and well-built seven-story brick structure on a lot 54x127 feet, situated on the east side of Broadway, between Olive and Pine Streets. The transaction is important in two ways. It guarantees to Broadway the monopoly of the retail business for at least ten years; and it sounds the death knell to Washington Avenue property as retail property. In doing this it only emphasizes the *Republic's* position taken long since, that Washington Avenue is and must of necessity always remain a wholesale street. It is conceded without question that Mr. E. C. Simmons, president of the Simmons Hardware Co., is one of the shrewdest business men in St. Louis, and it has been known for a long time that he was seeking to remove his retail department from Washington Avenue. That he selected Broadway is but another way of emphasizing his wonderful business acumen. When asked about the lease and proposed move by a *Republic* representative, Mr. Simmons said: "Yes, we have leased the North Broadway premises, and our rent there begins June 1, but we may give Mr. Nicholson a little leeway in getting out. Our moving will begin say within fifteen days, and we will transfer our entire retail department to the new building. We will remove our wholesale department to the Cupples group as soon as our building there is finished, which will probably be September 2 this year. We expect to have our present quarters entirely vacated by the close of the present year."

In the announcement of the failure of Buehler, Bonbright & Co., of Philadelphia, in our last preceding issue, we were misled by a Philadelphia newspaper into the erroneous statement that E. D. Eyre had died in 1893. We are glad to make a decided correction, as Mr. Eyre is still upon earth—happy in a useful business life, a bright and living presence to his friends, and good, we hope, for many more years of trade. He is a member of the firm of Lesher & Eyre, at Ardmore, Pa., and writes us that he is not only still upon earth, but in the enjoyment of most excellent health.

The Iowa Farming Tool Co., Fort Madison, Iowa, are doing a very successful business this year, having one of the largest factories of the kind in the world, and making a great variety of Hand Farming Tools. Their trade is scattered all over the world, recent shipments having been made to Sweden, Germany, the Sandwich Islands and South Africa. The plant is one of the permanent things in American manufacture, having run for more than forty years, and for more than twenty years under the present incorporated name.

Irving A. Keene, treasurer of the Razorine Mfg. Co., No. 2 West Fourteenth Street, New York, will sail for Europe on June 12th, for the purpose of opening offices in London, Glasgow, Paris and Hamburg, and to advertise Razorine throughout Europe. The company state that they have not only had great success in this country, but have built up a large foreign trade.

The Morton Tin-Plate Co. are erecting a new warehouse 120 feet long, 40 feet wide between the tracks of the Baltimore & Ohio, and Cleveland & Marietta railroads, Cambridge, Ohio.

CONFESSIONS OF AN UNSUCCESSFUL CLERK.—I.

EDITOR HARDWARE: I have read many an entertaining article in your columns and elsewhere, from the pens of successful business men, telling in more or less detail, how by honesty and close attention to business in their days of clerkship, they have won their way to proprietorship, business reputation and wealth.

I am now near fifty years of age, and hold a six-hundred dollar position in a general country store, where, I hope, if not discharged, to end my days in the monotonous round of its humble duties. There have been times when a more ambitious purpose filled my mind, but that was years ago; and my own failure in life leads me to look with considerable interest at everything recorded by men who have been able to do what I undertook, but did not carry to success.

Greatly interested attention gave I to the letters of my friend, Mark Rowland, whose business life was so graphically outlined in recent issues of HARDWARE, in that admirable serial entitled "From Porter to Partnership."

I accept your kind offer of space, Mr. Editor, in which to supplement the cheerful revelations referred to, by some truthful experiences of my own.

I will show you, in a little space, how I managed to fit myself for the position now occupied, and by what methods my business life was deprived of those emoluments of wealth and honor that my early associates have so pleasantly garnered.

I knew Mark Rowland well. Soon after he entered the employ of Mr. Ely, in the combined capacity of errand boy, porter and sub-clerk, I was installed in a similar position in the store of Samson & Crow, at the county seat, an Ohio town of some four thousand inhabitants, which possessed not only the court house, but one railroad and two long lines of hitching posts—one row upon each side of the main street, where a hundred or so teams of country buyers would find location and a feeding place during the business hours of each pleasant day.

I was born and raised in the little country town in which Mark lived, and where he laid the foundations of his business success. We attended the same school for several years, and it was with no little wonder that I noted his proficiency in arithmetic, and the confident air with which he would march up to the blackboard and "do" the most abstruse "sums" in Ray's Third Part Arithmetic. The examples and definitions which failed of accomplishment at my hands, were always turned over to Mark; and the superior air with which he would march by me, and cover the board with figures that, under his deft manipulation, always aggregated safely into the answer required by the book, was an aggravation that had its sting so deep that, even to-day, I am unable to recall it without a lingering touch of jealous heartburn.

In reading, geography and spelling, I could hold my own with him; but in those days and schools, the supreme test of intellectual merit lay in the ease with which a pupil could master his arithmetic. What an unattractive round of mysteries lay bound in that dog-eared, brown-covered book! Commencing with the multiplication table—(how I hated it, with its six times seven are forty-nine; eight times nine are ninety-four)—and working on, by the slough of Fractions; the morass of Proportion; that hill of difficulty called Partial Payments; and so on by Cube Root, Arithmetical Progression, and those like horrible things, put in, I believed, merely to entrap a boy who found more pleasure in playing "authors," or sleigh-riding with the girls, than in poking around at home, studying dry figures by the light of a tallow candle set over in the middle of the kitchen table.

I have said that the supreme test of our district school lay in arithmetical proficiency. There should be a slight modification of this statement. Once each week we had an afternoon for "speaking pieces," when the little girls would come in clean pinafores, and the big girls in curls and delaine dresses; the little boys with newly-washed faces, and the big boys in their store clothes—well do I remember that Mark Rowland was the first boy in our school to wear a real paper collar.

A few prim old ladies, redolent with "dill," and perhaps a school director, would be present upon these stirring occasions, to catch this intellectual overflow from the "Corners" school. The boy or girl who could make the best appearance in the way of essay or declamation was, for the moment, set upon a pedestal of fame equal to that of the prize pupil in Ray's distracting series of mathematical conundrums.

Where was Mark's glory in "sums," when I was permitted to march out upon the floor, in well-blacked cowhide boots and a black alpaca roundabout, and in shrill and soul-compelling manner, recite "Marco Bozzaris" or "On Linden When the Sun was Low!" I was regarded as one of the "show" pupils brought out upon such occasions: and, unfortunately for me, the idea found lodgment in my mind that as fame and honor could be so easily won in that little world by this appearance once each week, it would be folly to labor all the remaining days over lessons that were so hard to learn and so easy to forget.

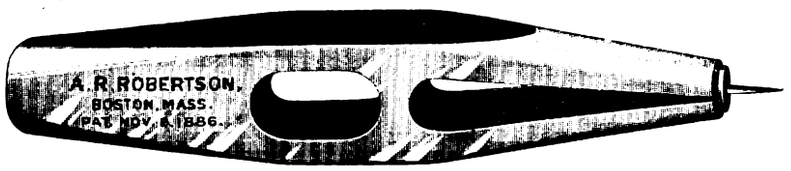
The schooldays of a poor boy in the country are usually over at an early age. At a time when he should be in the hands of careful trainers, who are endeavoring to discover the bent of his talents that they may be led in the right direction, practical necessity drives him to seek some labor by which he may pay his own way in the world. I was hardly sixteen when my schooldays ended. My father's roof and table were still ungrudgingly at my service, but boots, hats and clothes required ready money, which I was considered old enough to earn.

I must confess that this view coincided with my own. I felt that all the education I should need, even for the United States Senate, which was then set as the goal of my ambition, had been already secured; and that such solid acquirements as were lacking could be made up by dash and guess-work. In later years it has been my lot to meet more than one young man who set out in life equipped with the same miserable theory.

The succeeding year was spent in farm work, here and there, at fifty cents a day—haying, hoeing, chopping, cutting corn, plowing, etc. It was good physical exercise, and in that respect a great benefit. My evenings were largely spent in reading the old *New York Ledger*, Captain Mayne Reid's remarkable stories, or Mrs. Southworth's early novels—about as bad a collection of trash as could have fallen into a boy's hands.

I think that Mark Rowland's success in getting into Mr. Ely's store first set me to the serious consideration of seeking something similar for myself. Of course, I meant to become a lawyer—we boys in those days thought that the one requirement for that profession, was an ability to "speak pieces" better than the other boys. I recognized the fact, however, that a leap from Deacon Peck's cornfield into a law office, was beyond even my abilities, and that some intermediate step was necessary. A few years in a store, I reasoned, would enable me to lay aside a little

Digitized by Google



money, and pass away the time before some eminent jurist might come along, discover me, and take me into immediate partnership.

There was no chance in the stores of our village, Mark having secured the one vacancy then open. The county seat was only fifteen miles away, and my hopes naturally turned in that direction. I knew that my father would raise objection to my leaving home for a year or so at least, and I decided to do a little figuring without him.

It was late in the year when he decided to drive over to G——— with a load of hides he had been buying from the farmers, and I was permitted to go with him. We reached our destination a little before noon, and after dinner at the main tavern, I set out among the stores to seek my fortune.

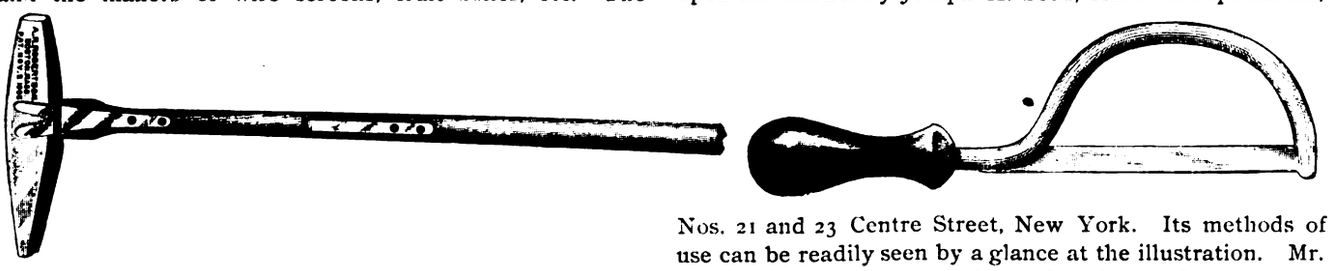
Horseshoe Magnet Hammer.

The utility of magnetism as applied to hammers or other tools, has never, we believe, been more successfully demonstrated than in the Horseshoe Magnet Hammer invented and patented by Arthur R. Robertson, of Boston, Mass.

In this tool, magnetism has been brought to a high degree of efficiency and the horseshoe magnet made to serve a most useful purpose. This hammer is deservedly popular among bill-posters and traveling advertisers, "who can do more rapid and effective work with it than with any other implement ever devised for tacking up advertising cards and signs." The long plain and sectional handles also made by Mr. Robertson are, in their way, equal in quality to the hammer, and help to make the tool complete for the purpose for which it was originally devised. Springs are affixed to the long handles to assist in raising a card to the desired position and setting the first tack. While the advertiser is especially benefitted by this invention, the hammer is also useful to the upholsterer, casket trimmer, and the makers of wire screens, fruit boxes, etc. The patent covering this hammer secures to the inventor the sole right to make hammers of any size and shape embodying the principle of the horseshoe magnet. We present cuts showing the full size and shape of a regular hammer head weighing five ounces and of a section of long handle with springs affixed. Price lists can be had by addressing A. R. Robertson, No. 185 Summer Street, Boston, Mass.

Canadian Hardware Makers.

A matter of some interest to American Hardware manufacturers comes from Quebec, under date of May 18th, in these words:



"In the House of Commons, yesterday, Sir Richard Cartwright attacked the government for having sent W. A. Hawthorne, of the Wellandvale Mfg. Co. of St. Catherines, Ont., to the United States to find out the selling price of certain Hardware goods so as to raise the customs duty on them. The result of Mr. Hawthorne's trip was to increase the price 15 and 16 per cent., in favor of his own manufactured articles. Sir Richard pointed to the indecency of such conduct on the part of the government, which went to show that they were tools of certain manufacturers in the country. No one objected to the revenue being protected, but to send an interested party to act as Mr. Hawthorne had done was indefensible. Customs Controller Wallace, who sent Mr. Hawthorne, defended his action, and said it was done to protect the revenue. Mr. Foster, however, admitted this was not the case, but that it was done with a view of protecting Canadian industry against imports of American manufacturers. This caused a strong protest from many of the Liberals, who did not see that the country would suffer if consumers did buy imported goods a few cents cheaper because of the lesser duty."

Middletown's Advantages.

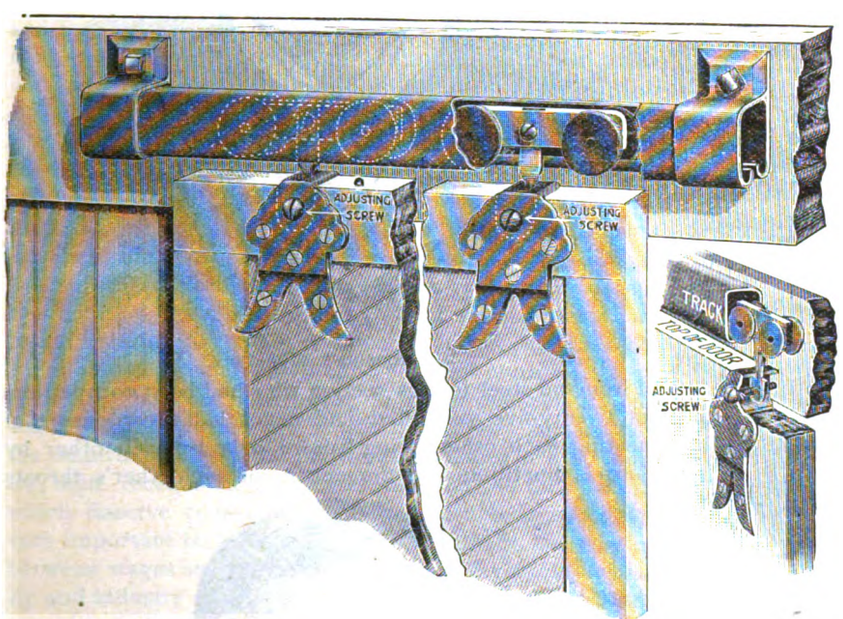
The city of Middletown (Conn.) is a desirable place to locate, not only for manufacturing purposes, but for those who appreciate a comfortable and pleasant home, as it is well equipped with accommodations for all purposes. We have railroads and steamboats; two telegraph and express companies, a perfect and complete telephone service, and at a reduced price. The living expenses of a family can be reduced to a minimum, and one of the most potent agents is the gas cooking stove. The people are appreciating this fact as the sales of stoves have increased every year. They are not expensive when their efficiency is considered. Motive power for manufacturing purposes can be furnished at a moderate cost, and in small and compact form in the shape of electric motors. These do away with engines, boilers and engineers. There are over thirty-five electric motors, generating from one to thirty horse-power each, in use in this city. There are also a great many fan motors used in the local stores. It is so managed that by the application of a recording meter they pay only for the current used.—*Middletown Sentinel.*

Gas Tip Cleaner.

The handy and convenient Gas Tip Cleaner shown in the accompanying illustration is being manufactured and placed upon the market by Joseph H. Seed, Hardware specialties,

Nos. 21 and 23 Centre Street, New York. Its methods of use can be readily seen by a glance at the illustration. Mr. Seed will be glad to send the trade prices and terms, upon application.

When some important repairs demanding the presence of craftsmen of many different trades were recently made to a club house, it was noticeable that not a single mechanic of American birth and lineage was engaged upon the work. A representative of the contractor said that American mechanics were extremely hard to obtain.—*New York Sun.* We wonder if this is true?



The Van Alen nail mill, at Northumberland, Pa., was started on Thursday morning last. This is the large mill that was destroyed by fire in December last. Within three hours after starting, the mill was discovered to be on fire again. It was put out without much damage.

The Laughlin Nail Works, Martin's Ferry, Ohio, have resumed, after being shut down five months. There are two hundred and twelve machines in these factories.

Barn Door Hangers.

The illustration here shown is that of a barn door fitted with the Lateral Adjustable Hanger manufactured by the Coburn Trolley Track Mfg. Co., Holyoke, Mass. It is described as very simple and applied with little expense. The track is so constructed that a covering is not necessary when used outside. "No chance for snow or ice to obstruct the trolleys, they being entirely within the track. As the door is suspended from between the wheels a central hanging is insured, thus obviating any chafing of the door. Absolutely impossible for the door to jump the track, this feature alone being worth more than the cost of the entire fixture, but to that we add the lateral adjustment, a feature not embodied in any hanger made. The adjusting features are fully protected by patents. The adjustment allows the door to run as easily when warped as when in line. Adjustment can be made by a screwdriver, without removing any portion of the fixture, in five minutes' time. The relative position of the trolleys to track is never changed, the door being carried to or from the wall by the action of the adjusting screw. The petticoat, or door bracket, has a strolled cup, which is set into top rail of door, the pendant

from the carrier has a shoulder, cut on each side at a point of contact with sides of slot in petticoat, which sustains the weight of the door wholly, the lower end of pendant is tapped into which the adjusting screw is fitted, that in turn being keyed into the petticoat, so that by giving the adjusting screw a few turns in either direction, you will carry the door to or from the wall more than an inch, thus relieving any binding occasioned by twisting or warping of the door. Each set of Barn Door Hangers consists of 2 roller-bearing carriers with pendants attached, 2 petticoats, or door brackets, 4 roller-bearing trolleys, 1 right and left end track bracket, center brackets enough for each point."

A Flying Bicycle.

Oscar F. Lewis, Saratoga, N. Y., has invented a very curious bicycle air-ship, from which he expects great things, says an exchange. "Mr. Lewis is a market gardener and something of an amateur machinist. Several years ago he became interested in the subject of air-ships and flying machines. He made several models that were unsatisfactory. He finally hit on his present model, and constructed an air-ship rather than a flying machine. It is to be made to rise by means of a silk balloon of pillow shape, and designed to hold 3000 cubic feet of gas. The balloon is about 50 feet long. Suspended from it is an aluminum frame in which is set a bicycle. The wheels of the machine are worked by pedals and are connected by belts with two propellers, one in front and the other behind. The steering apparatus consists of a sail stretched on a frame 15 feet long and four feet wide. It is moved by the handle bar of the bicycle, and may be turned to an angle of 45 degrees. Mr. Lewis claims that he can turn his machine around in a space of 100 feet square. There is a regulator on the balloon by which he can grade his elevation. Judging from the size of the balloon the machine ought to go up in the air after the gas is once in it. Mr. Lewis says he can drive it 15 miles an hour."

The Clark Mfg. Co., Janesville, Wis., who were thrown out of quarters by the burning of the Victor factory, have reorganized, and will resume work in the old Holloway & Johnson store on South River Street. The articles manufactured are post augers, bag holders and trucks, patent farm gates, scales, saw tighteners and tobacco spuds. The company own all the patents. The corporation have a capital stock of $5000, and the new officers are: President, E. W. Lowell; vice-president, F. R. Pendleton; treasurer, Stanley B. Smith; secretary, H. S. Gilkey; superintendent, J. W. Clark. Mr. Pendleton succeeds George L. Carrington as vice-president and Stanley B. Smith succeeds Mr. Pendleton as treasurer. The officers are all well known business men, while Mr. Clark the superintendent is a skilled mechanic and inventor, so the continued success of the industry is assured.

At a meeting of the Stove Founders' National Defense Association in Chicago, the following stove manufacturers were elected as officers and committees for the several districts: Henry Cribben, president; W. T. Bradbury, vice-president; T. J. Hogan, secretary; A. C. Mott, treasurer. Committee for Second District—George Sard, C. S. Prizer, D. G. Reynolds, N. B. Perry, E. W. Peck. Committee for Third District—Jeremiah Dwyer, W. W. Baldwin, James Dwyer, I. B. Resor, W. T. Bradbury. Committee for Fourth District—C. H. Castle, N. H. Burt, G. D. Dana, J. W. Van Cleve, J. Goldschmidt. The first district, which comprises New England, has never been organized.

Chelsea, Mich., is on the boom. The Glazier Stove Co. have purchased a large tract of land, consisting of village lots, and are moving the houses to different parts of the village. They will commence operations at once to construct a large foundry and buildings for the shops. There is also to be constructed soon a large creamery, and there is some talk of a carriage factory being located there.

The steel frame for the extension to Gardes Hotel, New Haven, Conn., has been completed by the Berlin Iron Bridge Co., East Berlin, Conn. The new boiler house for the Piercefield Paper & Mining Co., at Piercefield Falls, N. Y., has been completed by the same company.

The San Jose Hardware Co., incorporated. Principal place of business, San Jose, Cal. Capital stock $25,000 with A. E. Holmes, S. B. Bogart and C. H. Johnson of San Jose, F. H. Holmes of Berryessa and Frank A. Bogart of San Francisco as directors.

The Washburn & Moen Mfg. Co., Worcester, Mass., have broken ground for an addition to their Grove Street Works. The building will be one story, 220x70 feet, and will be used for furnaces.

A VERY ACTIVE HARDWARE ASSOCIATION.

The Western New England Iron, Steel & Hardware Association has, by its labors, demonstrated in many ways the good that can be secured through organizations of this character. It combines business and pleasure in an admirable manner; and while its members are enjoying themselves in a social way, at their stated reunions, they are also looking after the combined business interests of all, and in various ways protecting themselves against such dangers and impositions as can be avoided by combined action.

The Association is young in the matter of years, but old enough to have already done much good for the trade in several ways. It is a direct outcome of the fraternal movement which found its inception in the New York Hardware Club, which was followed by the organization of the now famous Boston association. Early in 1894, R. S. Woodruff, of the firm of C. S. Mersick & Co., New Haven, Conn., paid a visit to Boston, and became greatly interested in the working of the association of that city. What more especially struck him were the results from their bureau of credit and information. He at once set himself to work among the dealers in Hardware, iron and steel in Western New England, and his labors eventuated in the call from the office of C. S. Mersick & Co. to all the dealers in Connecticut and Western Massachusetts to meet at the Republican League Club House of New Haven, February 16, 1894. In response to this invitation fourteen Hardware dealers responded. At a meeting held in New Haven on April 13th, the Western New England Iron, Steel & Hardware Association was formally organized. The following officers were elected:

L. L. ENSWORTH, PRESIDENT.

L. L. Ensworth, Hartford, president.
R. S. Woodruff, New Haven, secretary.
C. C. Lewis, Springfield, treasurer.

These gentlemen have labored in season and out of season from that time to this to make the Association what it is, and we take pleasure in herewith presenting their portraits to the Hardware trade.

Mr. Woodruff, who is so intimately connected with the origin of the Association, soon after its formation stated its purposes and objects in the following words: "The object is not so much to combine and regulate prices, as to create social and friendly feeling among the members. At the time of our first meeting we found many of the older dealers in iron and steel in this section who had been competitors for twenty-five years, but had never had the pleasure of meeting each other, being known only to each other by sharp competition, and the cutting of each other's throats whenever the opportunity offered. By getting together and becoming better acquainted, we expect to do away with petty jealousy and lead each dealer to place more confidence in his competitors."

R. S. WOODRUFF, SECRETARY.

C. C LEWIS, TREASURER

It is with marked pleasure that we record the fact that

Digitized by Google

the workings of this Association have proven very satisfactory and profitable to the members. The meetings are usually held in New Haven upon each alternate month. The attendance is always good and a general good time is enjoyed by all.

In connection with this Association, there is a Credit Bureau department to which all poor accounts are reported and referred back to each member of the Association, so that they know at all times who the delinquent and unworthy debtors are. The result brought about by the Credit Bureau has been something remarkable, as a very large percentage of the claims placed in the hands of the secretary of the Bureau has been collected.

The next meeting of this Association will be held in Hartford the second Friday in June.

Wages in Luxemburg.

George H. Murphy, United States Commercial Agent in Luxemburg, writes as follows concerning the wages there paid to workingmen:

Generally speaking, the average earnings of ordinary workmen amount to less than $200 per annum; women earn about half as much as men. The average wages of miners and foundry hands is less than $1 a day. The average annual salaries of primary school teachers are $224 for males and $179 for females. A very large majority of the officials and employees of the Government earn less than $400 each per annum. On the other hand, still speaking generally, the necessaries of life cost as much in central Europe as they do in the United States. A workingman's expenditures for clothing and rent may, possibly, be somewhat less here than in the United States; but in the town of Luxemburg, coal costs $7 per ton; eggs, 21 cents per dozen; rye flour, 3 cents per pound; wheat flour, 5 cents per pound; sugar, 8 cents per pound; butter, 25 cents per pound; beef, 19 cents per pound; veal and mutton, 16 to 20 cents per pound; fresh pork, 20 cents per pound; and smoked pork, 23 cents per pound, Naturally, in studying the material condition of the working classes of any country, their receipts and expenses are not the only factors which deserve consideration; but, undoubtedly, they are very important factors, and wherever, as here, the relation between wages and the cost of living is unfavorable, frugality and industry can hardly be expected to accomplish any miracle greater than that of enabling a thrifty workman to keep out of debt.

This distressing state of affairs is partly, no doubt, an unavoidable result of the competitive demand for employment which must exist in every densely populated country. But the misery of the European poor has been very much aggravated by that popular craze which causes the large cities and towns of Germany to grow with a rapidity as phenomenal as that which is doubling and tripling the population of our own Western cities. An important point of difference, however, lies in the fact that foreign immigration largely accounts for the development of our towns, whereas German cities expand almost entirely at the expense of the rural districts. In central Europe, every ambitious breadwinner turns his eyes and feet toward the city. Consequently in every great city the labor market is glutted, the natural result being that the wages of labor keep falling. This evil is enhanced by the ever-increasing employment of labor-saving machinery. Moreover, with the growth of manufacturing, the competition between the manufacturers themselves in the markets where they dispose of their products becomes more and more intense and results in a further decline of prices. As a consequence, manufacturers, in order to avoid loss, are compelled to reduce costs of production, and this is most conveniently effected either by reducing the wages of employees or by introducing more labor-saving machinery.

By imprudently flocking into the great cities, the workingmen of central Europe have placed themseves and families in a position of utter dependence upon huge factories, whose owners, in order to compete successfully with the owners of other huge factories, are compelled to pay to those workmen who are fortunate enough to find employment wages which will barely suffice to secure for their famlies the absolute necessaries of life.

The policy of the countries of central Europe seems to be to extend and inflate their manufacturing industries indefinitely. Their idea of national prosperity and happiness seems to be nothing more than the attainment of the ability to export manufactures and to import food. In support of this policy, in many cases, the governments of different central European States take from the workingman an import duty on his food in order to give to the manufacturer an export bounty.

English Opinion of American Associations.

"Somehow or another, it strikes one that when the Americans make up their minds to carry out a national movement they manage their business better than we are accustomed to do in this country," says an English exchange. "And yet it is by no means apparent why this should be so. The United Kingdom is not only a very much smaller country, but up to a certain point it is one with a much greater solidarity of interests, and yet such a thing as a national manufacturers' convention in this country, for objects and aims common alike to all, would be difficult to conceive of, and has probably never been attempted. The nearest approach to it is the meeting of the Association of Chambers of Commerce, but the proceedings of that association have become pretty well stereotyped, and their special feature is the recurrent reproduction of fads of so extreme and impossible a character that they are seldom listened to with really serious attention. The truth appears to be that John Bull probably trusts too much to his own initiative and independent action, and thereby loses the suasion and the force which union alone can give. It is certainly time that the English manufacturers took up some similar action on behalf of the greatly depressed iron and steel industries of this country."

The first steel sailing vessel ever built on the great lakes was launched some weeks ago at the yards of the Chicago Shipbuilding Co., on the Calumet River, at Chicago. The new boat is owned by the Minnesota Steamship Co., and is named *Malta*. The *Malta* is 302 feet keel, 320 feet over all, 40 feet beam, and 24 feet deep. On a draft of 14½ feet it will carry 3000 tons, and when the 20-foot channel is completed its carrying capacity will exceed 4000 tons. The new boat has three masts and sails, but will be used as a tow barge behind the dozen big steel steamers of the company. It will be pulled, however, by a steel tow line drawn over a patent steam drumhead, which acts automatically in giving out more line under great strain and then in taking in the slack. This is the first time the new invention has been placed on a lake boat. The cost of the *Malta* is $100,000.

The construction of an object glass of extraordinary size is to be undertaken at the Jena factory in Germany for a telescope for the Berlin Exhibition of 1896. It is to be 110 centimetres (about 41 inches in diameter). This will, it is claimed, break the record once more, and be the largest object glass in the world, being many inches larger than the great Lick instrument.

Hon. David A. Dangler, president of the Dangler Stove & Mfg. Co., Cleveland, Ohio, sailed on June 8th for Europe. Accompanied by Mrs. Dangler, he will spend a couple of months in travel and sight-seeing.

NEW GOODS IN THE MARKET.

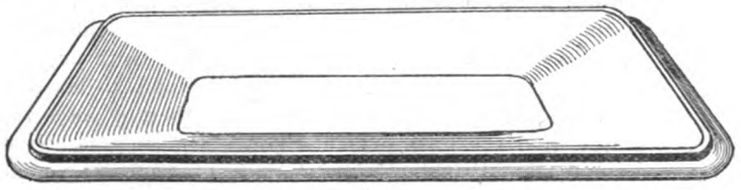
If you have anything NEW, let the world know it by illustrating it in these columns.

NO CHARGE WHATEVER is made, direct or indirect, as our interest lies in showing the readers of "HARDWARE" where the LIVE manufacturers and wholesalers are, and what they are doing.

When your NOVELTY or SPECIALTY is ready, send us an Electrotype and descriptive matter, which will appear immediately.

The Hardwaremen everywhere read this department; it is to your interest to make prompt use of it.

Ratchet Blind and Shutter Bower.



Walter Smith & Co., Juliustown, N. J., are offering the trade the Shutter Bower here illustrated. With this con-

trivance the shutters can be held at different distances apart, ranging from one-half to four inches. It also prevents them from being blown together by the wind. These Bowers are put up in half gross boxes, nicely labeled. The manufacturers state that they will deliver the first half gross as a sample lot, free of charge for expressage.

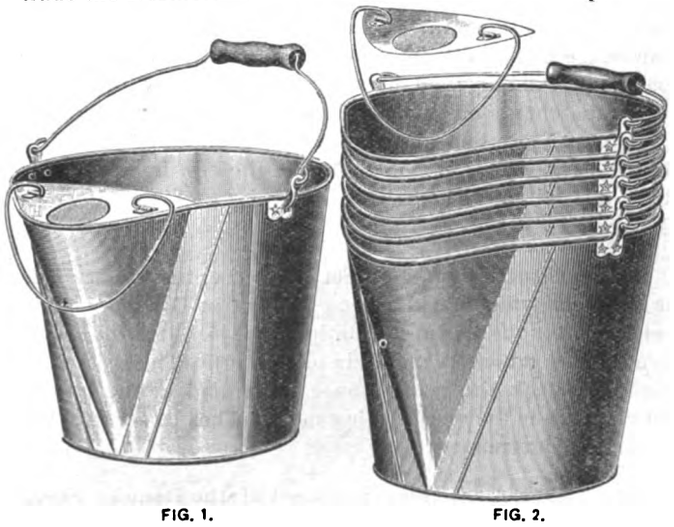
Golden Crown Butchers' Meat Trays.

The Stuart & Peterson Co., Burlington, N. J., are introducing some new Butchers' Trays, illustration of one being shown here. These Trays are made of iron, lined with porcelain, and finished on the outside with blue enamel, with an edge to protect the porcelain. It is pointed out that such trays as these are as necessary to a well-appointed

meat market as a marble counter, and doing away with wooden trays which become meat-soaked and retain unpleasant odors. These trays are designed for the use of butchers, fish dealers, grocers, and for other purposes. The trays are made in three sizes—from 29–36 inches long, 20 to 27 inches wide, 2½ to 4 inches deep, each one being packed in a separate box ready for shipping.

Nestable Strainer Pails.

Sidney Shepard & Co., Buffalo, N. Y., are offering the trade the Nestable Strainer Pails here shown. The pail has



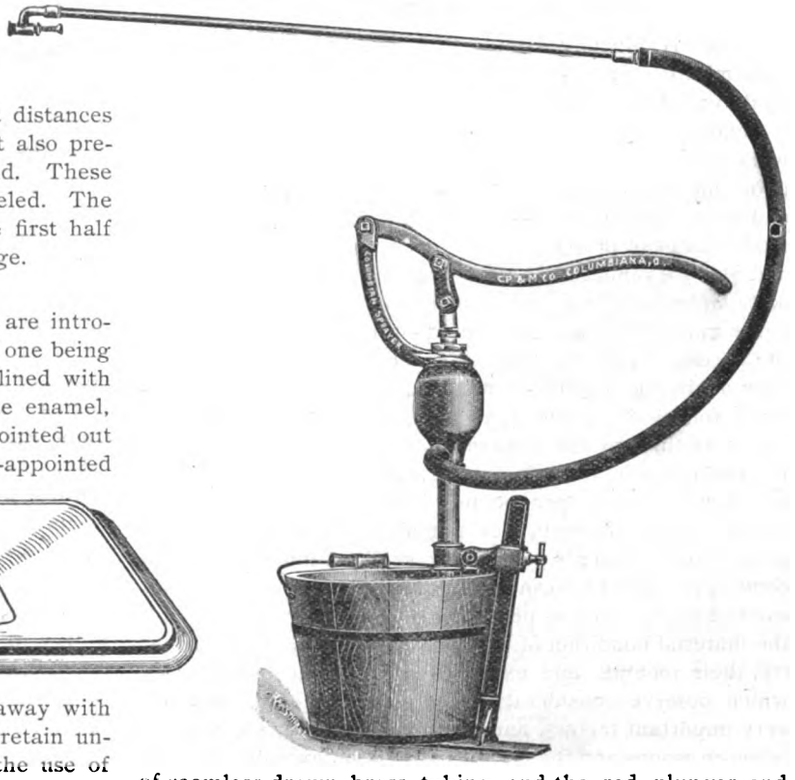


FIG. 1. FIG. 2.

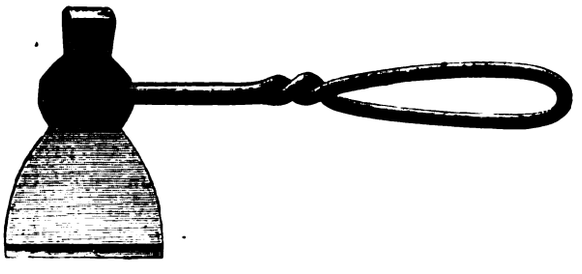
a broad lip and strainer attachment, while the attachment is adapted to use muslin as well as the strainer, if desired. The point is made, that should customers object to the detachable strainer, it is arranged so that it can be readily soldered fast by a tinner in a short time. The nestable feature enables the dealer to store a dozen pails in the space usually occupied by two pails. The makers remark that they have not sacrificed the essential qualities which dairymen require, and that without taking into account the nestable features.

Columbian Bucket Sprayer.



The illustration herewith given is of a Bucket Spray Pump put on the market by the Columbiana Pump & Machine Co., Columbiana, Ohio. The pump cylinder is made

of seamless drawn brass tubing, and the rod plunger and stuffing box are made of brass. The point is made that the pump is durable, and that by use of the lever attachment the necessary labor is reduced to one-fourth the effort to operate the ordinary form of direct hand hold bucket sprayer. The foot rest is so constructed that the Pump can be placed on a pail or removed from it in a few seconds, and is adjustable to any sized pail. Retail price, $3.50.

The Indestructible Hatchet.

Sedgwick & Co., No. 1319 Jackson Boulevard, Chicago, Ill., have recently introduced a hatchet under the name of the Indestructible. Illustration of same is here shown. This Hatchet is made of the best crucible steel, while the

handle is made of a steel rod twisted into a loop, enabling it to be hung upon a nail, while it is a good shape to fit the hand. The head is securely riveted to the handle, so there is no danger of its flying off. The blade is neatly polished and japanned. Price per dozen, $4.

An Oil Can Filler.

The desirability of a device by means of which oil cans can be filled quickly and absolutely without waste of oil will be readily conceded by any machinist or engineer, and we illustrate herewith a device by which this feat can easily be

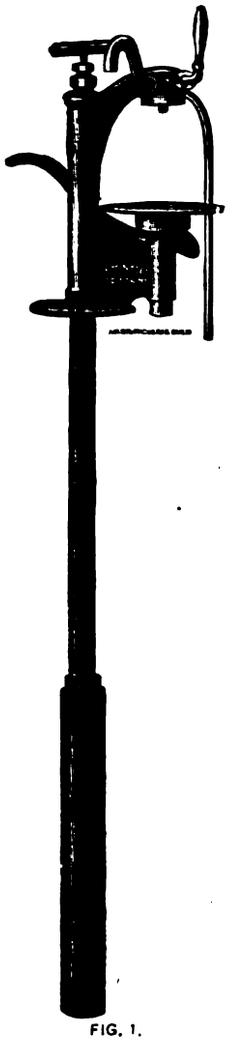

FIG. 1.

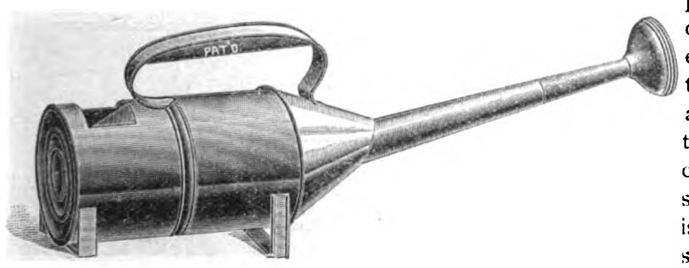

FIG. 2.

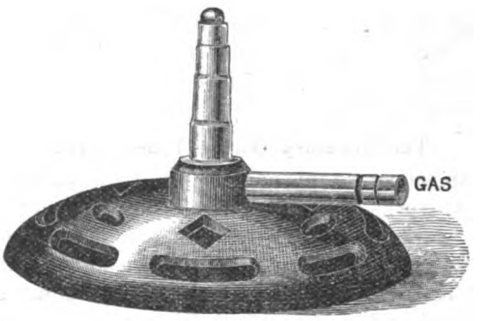
accomplished. As shown by Fig. 1, it is a pump with a flange by which it is readily attached to a tank of any kind, or a barrel, a suction pipe extending below into the oil. The pump has a brass barrel and piston, the former being 1½ inch to 12 inches long. Leather packing is used, end valves are hard steel balls. The discharge nozzle is double, i. e., there are two tubes, or openings eccentric with each other, the smaller one supplying the oil to the can, while the larger one vents it, and returns all surplus oil to the tank by means of the tube seen at the right. In operation, an oil can to be filled is placed upon the table, which is then raised until the opening in the can comes in contact with the conical discharge spout, a leather washer making the joint tight. The pump is then worked until the can is filled, and when stopped the overflow tube siphons off from the can a small quantity, sufficient to permit the spout to be screwed in without displacement of oil. Less than ten seconds suffice for a common oil can, and not a single drop of oil need be wasted or spilled. Fig. 1 shows it with a side spout by which any vessel, such as a pail, can be rapidly filled, the cock switching the discharge to this spout when desired. It is also made without this feature, as shown in Fig. 2. The manufacturer is F. D. Winkley, Madison, Wis.

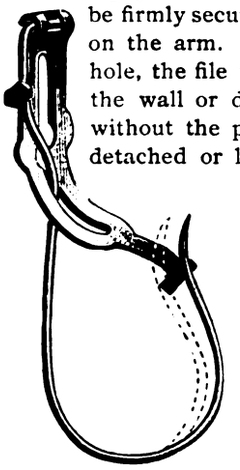
The Standard Watering Pot.



The Cleveland Stamping & Tool Co., of Cleveland, Ohio, are offering to the trade the Watering Pot here illustrated. They explain that the opening of the can is so arranged

that the water will not splash out while carrying, or when in use, and that the handle is so placed that it balances the can when filled or empty, so that the pot is much lighter to carry than the old style of watering pot. These cans are made in six sizes, 6, 8, 10, 12, 14 and 16 quarts. Any further information will be cheerfully given by the manufacturers.

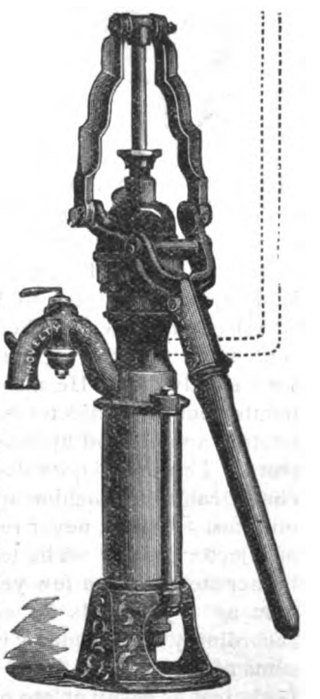
Gas Stove Stand and Drop Light.



Joseph H. Seed, No. 21 Centre Street, New York, is manufacturing the Vesuvius Gas Stove Stand and Drop Light, combined, here shown. It is described as a useful

device for holding the Vesuvius Gas Stove when it is not desirable to use the ordinary gas bracket; can be connected by rubber tubing to gas supply, and placed in any position. Is also used as a drop light for reading, sewing, etc. Prices and terms to the trade upon application.

Novelty Paper File.

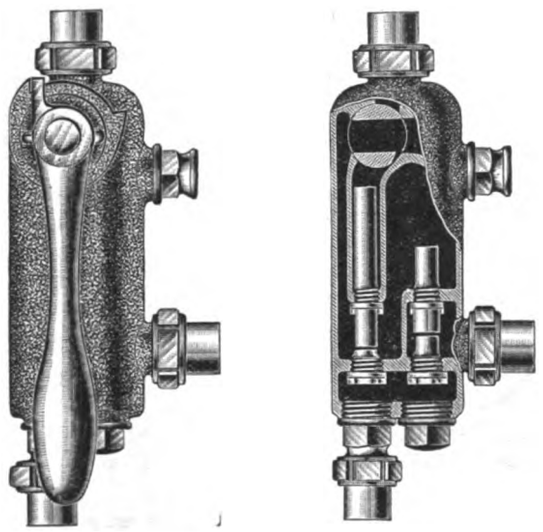


The Stover Novelty Works, Freeport, Ill., are putting on the market a new form of Paper File, which is herewith illustrated. The hook is hinged in the top of the arm and passes down through a slot in it, so that the weight of the hook brings the end of it against the end of the arm, thus automatically securing it and preventing papers from coming off. The hook must be pulled forward to open it and take off a paper. The dotted line shows how the hook may be firmly secured by passing it back of the shoulder on the arm. The frame having a slotted screw hole, the file with its contents may be taken from the wall or desk and put away in a safe or vault without the possibility of any of the papers being detached or lost from the wire. Its size is three

inches wide by five inches long.

The Novelty House or Sink Pump.

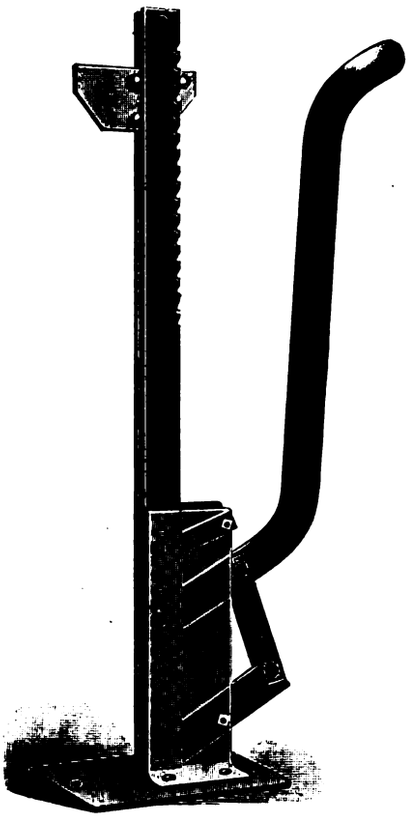
Hess, Snyder & Co., Massillon, Ohio, are putting on the market a new House or Sink Pump, illustration of which appears here. "This pump is designed for the purpose of elevating water into an attic tank or a general purpose pump about the house, embodying all the necessary features of a first-class house pump at a reasonable price. It is very substantially built, and is intended to be used where water is to be elevated to a great height, or a powerful, steady stream is wanted from the nozzle. It has a heavy 3-inch brass cylinder, brass plunger rod and brass valve seat. The patent handle attachment to the plunger rod is most complete in its arrangement for the purpose in use to-day. The handle is so arranged with an iron collar and set screw,



Digitized by Google

that it can be placed in any position around the pump, making it either right or left handed, and when raised to its extreme height the plunger raises the lower valve, allowing the water to escape to prevent freezing. The mouth of the spout is tapped for ¼-inch pipe, also fitted to receive a hose coupling. The spout contains a stop cock, carefully ground in, and the back of the pump is tapped for a 1-inch pipe connection for elevating purposes, making it possible to pump water either into the sink or into the attic tank, by turning the stop cock. The base is fitted to receive 1¼-inch iron or lead pipe."

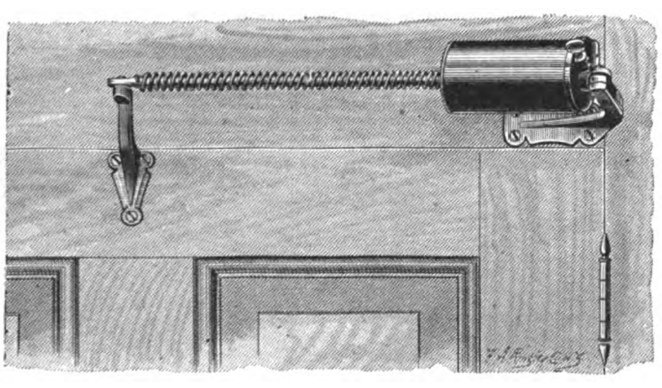
The Brownley Double Tube Injector.



We publish cuts of this new Double Tube Valveless Injector, which works at any pressure from 15 pounds up to 350 pounds; works all the way from 350 pounds down to 6 pounds without any regulation and without breaking, and lifts and feeds water on a 3 foot lift at temperatures up to 156 degrees and on a 22 foot lift as high as 130 degrees. These leading points we gather from certificates of thoroughly well known and independent people, published by the agents of the Brownley Injector. The device appears to be very simple. The steam inlet is one size smaller than the suction and delivery, thus being very economical as regards steam. "To start the Injector, steam is given when the water will immediatele appear at the overflow; the cock is

turned by means of a lever, and the water is then being fed to the boiler. No variation of steam at any point from 350 pounds down to 6 pounds of steam causes any loss of water at the overflow. The general foreman of the Manhattan Railway says that he tested the machine and was somewhat surprised at the result, the Brownley throwing about 33 per cent. more water in a given time than others, and doing it for a steady diet. He also says that one of the greatest points about the Injector is its great simplicity, which will be duly appreciated by those having charge of Injector repairs. There are no valves to grind. Any ordinary mechanic can take machine apart and put it together in five minutes. A plant never requires to shut down on account of injector repairs. The tendency of the age is all towards higher steam. In a few years 300 pounds will be as common as 175 pounds is to-day. Many experiments have accordingly been made by injector manufacturers, and large sums of money have been spent to attain this object. It feeds just as easily at 350 pounds as at any other and at 350 pounds the water in the tank was heated by blowing steam down suction pipe to 100 degrees and injector immediately lifted and fed it through hot injector pipes. The injector for locomotive purposes is slightly varied in form so as to be interchangeable with any standard injector. No jarring or application of emergency brake causes injector to break." Circulars containing certificates from reliable and well known users of steam will be obtained on application to E. F. Keating, No. 437 Water Street, New York, the general agent in the East.

A New Departure.



The accompanying cut is a transparent illustration of the Lane Patent Steel Jack, a new style in that line recently brought to the attention of the trade, described as "the only carriage jack on the market made wholly of steel. It

is simple, strong and compact, the lifting bar being a double column, between the two parts of which is the vertically adjustable lifting piece, doing away entirely with the ordinary objectionable steps and consequent tendency to tip forward or backward. The peculiar compound levers are also very effective." The makers, Lane Brothers, Poughkeepsie, N. Y., have had large experience in the manufacture of steel goods, being the first to successfully place upon the market a steel barn door hanger, and were also pioneers with an all steel parlor door hanger, both of which are now well-known throughout the United States and Canada.

National Spring Hinge and Check.

F. S. Hutchinson Co., Aldrich Building, Chambers, Warren and Church Streets, New York, are placing on the market the National Spring Hinge and Check, shown in the accompanying illustration. The special advantages claimed for it are: "It offers a strong, durable spring for closing

the door, combined with a check controlled by the atmospheric pressure to regulate the speed of closing and prevent the door slamming, and is at the same time very economical in first cost, as well as cost of putting it on the door and

Digitized by Google

repairs afterward. The cylinder shown in the cut has a piston nicely fitted inside, which is forced back when the door is opened, and the air escapes through an automatic valve. which closes immediately the door starts to close, when the only air admitted back of the piston is through a hole, the size of which is regulated by a thumb screw at the top, allowing just air enough to enter to close the door at any desired speed. All springs are reversible and will fit either right or left door, and with the extension arm can be placed on doors with either flush or projecting trim. There is absolutely no more effort required to open the doors fitted with this check than with the common spring."

Interstate Trap Shooting.

The advance programme of the Interstate Association's Trap Shooting Tournament, given for the Vicksburg Club, at Vicksburg, Miss., Wednesday and Thursday, June 26th and 27th, has been received.

Twenty events will be contested, ten on each day.

The directors and committees of the Interstate Association are as follows:

Directors: Chas. Tatham, president; O. D. Delano, vice-president; J. A. H. Dressel, secretary-treasurer; Justus Von Lengerke, Noel E. Money, Geo. H. Sampson, Paul North; Elmer E. Shaner, manager. Executive Committee: J. A. H. Dressel, chairman; Chas. Tatham, Justus Von Lengerke.

Classification and Tournament Committee: Justus Von Lengerke, chairman; Noel E. Money, Paul North.

Club Organization Committee: Paul North, chairman; Noel E. Money, Justus Von Lengerke.

The subscribers to the Interstate Association are: Tatham & Bros., No. 82 Beekman Street, New York, manufacturers of American Standard shot; LeRoy Shot & Lead Works, Nos. 261–263 Water Street, New York, manufacturers of "Eagle Brand" shot; Union Metallic Cartridge Co., Bridgeport, Conn., manufacturers of trap shells and loaded ammunition; Smokeless Powder Co., Limited, No. 147 Pearl Street, Boston, Mass., manufacturers of nitro powders; American "E. C." Powder Co., Limited, Oakland, N. J., manufacturers of "E. C." powder; Cleveland Target Co., Cleveland, Ohio, manufacturers of Blue Rock targets; Von Lengerke & Detmold, No. 8 Murray Street, New York, manufacturers of sportsmen's supplies, agents for Schultze and E. C. powders and Francotte guns; Excelsior Target Co., Baltimore, Md., manufacturers of targets, traps and tournament fixtures; Winchester Repeating Arms Co., New Haven, Conn., manufacturers of repeating firearms and ammunition.

A dispatch from Pittsburg states that Herbert A. Johnson, a wire manufacturer of Manchester, England, has been there examining improved machinery for the manufacture of nails. He said: "Tariff or no tariff, it is a fact that American nails are underselling us in our own markets. Many English purchasers prefer the American article in quality. American tin-plate is selling alongside the British article in the world's markets. I cannot see why this country should be afraid of any nation in its metal manufactures. I have read much about the financial depression in this country, but I have not been able to detect many signs of it."

A New Jersey Hardwareman has this sign conspicuously displayed in his store: "If you don't want what you see, ask for something else." Up on the Bowery, New York, a sign carries this bit of advice: "If you see anything you want, steal it."

The Central Oilgas Stove Co., which purchased the immense plant of the Smith Purifier Co., at Jackson, Mich., have begun work with a large number of men.

The Disstons Increase Wages.

The 1700 employees of the Disston Saw Works, in Tacony, Philadelphia, were joyfully surprised several days ago by a notification that their wages would be increased ten per cent. The announcement of the increase was made in such an unostentatious manner that the busy workmen could hardly, for the moment, realize their good luck. The ten per cent. addition to the employees' wages was entirely voluntary on the part of members of the company, for no increase was asked for and none was expected. While the increase is only a restoration of the reduction made during the business depression a few years ago, it is none the less appreciated by those directly and indirectly affected, especially as it goes into effect at once.

Hamilton Disston, president of the Disston Saw Works, when seen by a reporter, said: "It is a fact that we have increased the wages of our employees ten per cent., or restored to them the reduction made necessary by the business depression some time ago. Although our business has not reached that prosperous stage it was in before the repeal of the McKinley tariff act, still it has improved sufficiently to warrant the increase in wages. During last month the improvement was more noticeable than for some time. It had then reached a point of from ten to twelve per cent. better than in the same month last year, and we expect that by next month our business will be improved twenty per cent. over the corresponding month last year. We always wish to pay our employees good wages, and as business is perceptibly improving it is our desire to place them where they were before the panic. Then the news comes from different parts of the country that manufacturers are restoring the reductions made some time ago, and we want to keep up with the procession. We did not make this increase because other people do so, but because we wish to pay good wages when business improves enough to warrant it."

K. & F. Twist Drill.

Announcement is made by the Kearney & Foot Co., Nos. 100 and 102 Reade Street, New York, that the twist drill business formerly carried on in the name of James D. Foot, has been continued, from June 1st, by the Kearney & Foot Co., of which Mr. Foot is president. They will place their own drill upon the market, under the well-known trade mark, K. & F. This in itself should be recognized as a guarantee of excellence. The extended experience of the Kearney & Foot Co. in the manufacturing and tempering of files, will certainly enable them to meet the requirements of the market "for a specially tempered drill by which best results in use can be obtained." "While general excellence aud quality will be their first consideration," they add, "prices will be reasonable."

George W. Prentiss & Co., Springfield, Mass., are contemplating making an addition to the wire mill on Dwight Street, and the addition will occupy the vacant land adjoining the mill. The works have been crowded for some time, and an addition will soon be necessary. The proposed addition will be three stories high, the height of the main structure, and will be filled with wire working machinery. The structure will be about 40x90 feet and have a floor space of about 10,800 square feet, not including the basement. The company has been prosperous since its organization in 1857. The present mill was built in 1870.

The Nut & Washer Mfg. Co., of Milwaukee, Wis., have made a ten per cent. advance in the wages of employees. The plant is running thirteen and one-half hours per day.

Judging from the trade in Freezers this season, America is a nation of ice cream fiends.

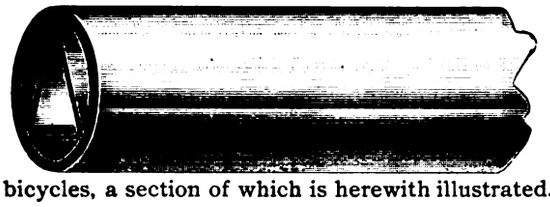
ILLUSTRATED BICYCLE NOVELTIES.



MANUFACTURERS and DEALERS are invited to make FREQUENT USE of these columns.

Anything NEW in BICYCLES or BICYCLE NOVELTIES should be sent us immediately. NO CHARGE, direct or indirect, is made, as our interest lies in SHOWING THE HARDWAREMAN what is going on in THE BICYCLING WORLD.

When your NOVELTY is ready, send us an Electrotype and descriptive matter, which will appear immediately.

Triangular Reinforcing Tubing.

The Hoffman Bicycle Co., Cleveland, Ohio, are using Triangular Tubing for reinforcing the frames of their Hoff-

man bicycles, a section of which is herewith illustrated. It is explained that the tubing adds about 12 ounces to the weight of an ordinary frame, but it makes the frame many times stronger than one without it. The Triangular Tubing is put in through the entire length of the top and bottom and in the rear forks. The company have applied for a patent for the device, which they control. Frames are built without the reinforced tubing if desired.

An Innovation in Bicycle Lanterns.

The Twentieth Century Headlight, invented and patented in the United States and foreign countries, by Col. Lewis F. Betts of New York, the inventor and patentee of the tubular street and driving lamps, and acknowledged expert in all matters pertaining to lamps and lanterns of the present day, is being placed on the market by the Betts Patent Head-Light Co., No. 10 Warren Street, New York. The Twentieth Century Bicycle Head-Light is built on different lines from others, and is described as able to stand the most severe test of bicycles and of wind. "The Betts patents cover a new system of regulating the injection and the ejection of air, to form a perfect combustion and other ingenious devices to withstand the severe motion of a bicycle. Fig. 1 shows the style of the lantern and gives the idea as to its shape. This company use no lens in their lantern, but give a powerful light, by the aid of a parabola reflector, which is of the locomotive class. Their carriage attachment, as shown in Fig. 2, to attach the lantern to the bicycle, has a minimum of motion, and is easily attached and detached from both bicycle and lantern, and when off the wheel

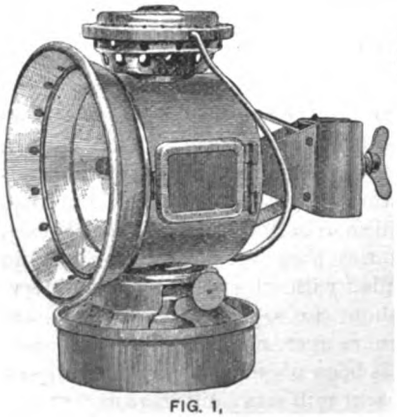


FIG. 1.

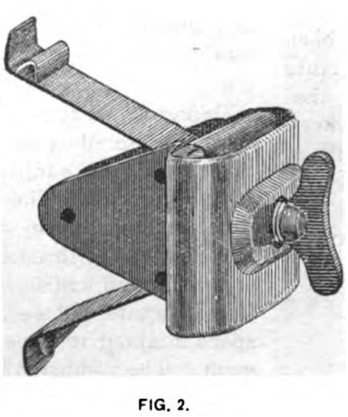

FIG. 2.

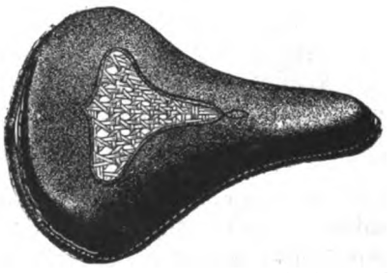

FIG. 3.

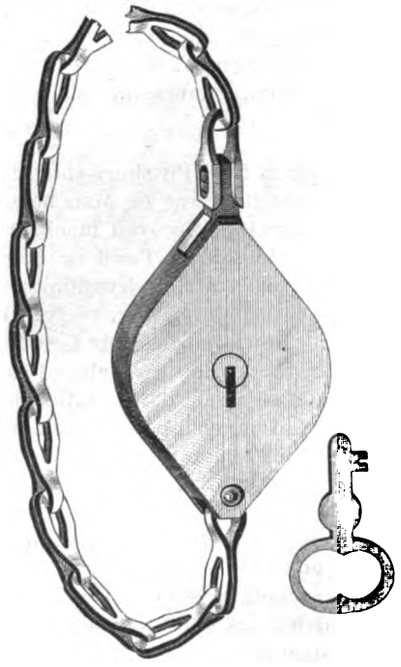
by using the bail handle, with which every lantern is fitted, becomes at once a small all-round hand lantern, as shown in Fig 3. It burns kerosene oil, while heavy and combination oils may also be used in it, if desired. The dimensions of this lantern are: extreme height, 4¾ inches; width, body of lantern, 2¾ inches; diameter, outside reflector rim, 3½ inches. The weight in aluminum is 4 ounces, aluminum bronze 7½ ounces, nickel plate 8 ounces; the spring attachment weighs 2 ounces. It is arranged so that it can be lighted, and the wick adjusted, from either side of the lantern. The oil pot carries sufficient oil to burn a matter from nine to ten hours. The lamp is simple in construction, and all parts are interchangeable, easily taken apart and put together, easy to keep clean, and there is nothing to melt, as there is no solder used in its construction. During the next few months the company will probably arrange, on this improved system, other and larger lanterns, such as locomotive head-lights, trolley car lights, and the various signal lights of this kind."

New Mesinger Saddle.

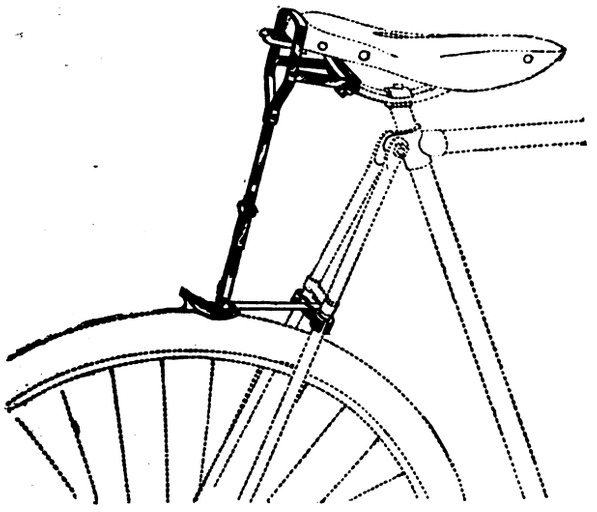


Hulbert Bros. & Co., No. 26 West Twenty-third Street, New York, have sole control of the Mesinger line of bicy-

cle saddles, an illustration of which is here shown. The saddle has a wooden cantle cane seat, ventilated and padded around the edge with felt, and covered except in the center with calf skin. The saddle is made in 10, 15 and 18 ounce weights, the 10 ounce having a wooden spring and the 15 and 18 ounce saddles having metal springs. They are referred to as handsome, light and comfortable saddles, especially suited to men's and ladies' machines. They retail at $5 for all sizes.

The Diamond Bicycle Lock.

Tower & Lyon, No. 95 Chambers Street, New York, are offering the trade a new Bicycle Lock called the Diamond. The quality of the goods offered by this company is well known and the new lock is no exception to the general rule.



It is made entirely of brass, and is 1⅛ inches long. The brass chain is extra strong. It is referred to as neat, strong and reliable. No. 500 brass, $3.75 per dozen. No. 500 nickel-plated, $4.75 per dozen.

Digitized by Google

The Merwin Saddle Brake.

The Merwin Saddle Brake, illustration of which is here shown, is put on the market by Hulbert Bros. & Co., No. 26 West Twenty-third Street, New York. The brake is made of Bessemer steel, light in weight and strong. It is clamped securely to the saddle springs underneath the saddle, and fits equally well, it is explained, two round springs, one flat spring, one square spring, or, in fact, any kind of a spring. It is also clamped securely to the rear forks, and the spoon is attached to a spring steel, so that when the

pressure is released it immediately comes back to its normal position, disengaging from the tire. The upright rod is in two parts, so that it may be lengthened or shortened to correspond with the height of the saddle when raised or lowered. The spoon and spring are enameled in black, and the upper part of the Brake is nickeled. It is said that the Brake works directly on the rear or power wheel; also that with both hands on the handles, and both feet on the pedals, the rider can regulate the Brake at pleasure by moving a little further back on the saddle than usual. It is explained that in case of a collision being inevitable, the rider can throw the entire weight of the body on the Brake and stop instantly, but that a header is avoided by the weight being so far back. An ordinary bicycle coat covers more than half of the brake when the rider is in the saddle, so that it is practically unobservable. The Brake is retailed at $2.

The cycle has been used in actual warfare; the first instance being a campaign against a chief of a South African tribe. A light roadster was recently used for carrying dispatches between Blaamoberg (the seat of the war) and Pistersberg, the nearest telegraphic station, a distance of seventy miles. A Mr. John Kleinenberg, a member of the Zoutpansberg Wanderers C. C., was the rider selected by the South African Republic Government to carry the dispatches, and it is interesting to learn that he was enabled to perform the trying journeys over very bad roads in much faster time than could be done by a horse. His wheel, fitted with double tube tires, stood the tests splendidly.

New York has a novel business—that of a company which offers to test gas meters, without charge if the meters are found to be correct, and for half the overcharge refunded by the gas company on all money paid if the meters are found to be fast. The company advertises that over $40,000 rebate has been made to consumers by gas companies in the past four years. The gas companies must love the inventor of the scheme.—*Boston Globe.*

The Sioux City (Iowa) Stove Co., which went to pieces in the financial crash of 1893, is to be reorganized. The receiver has applied for authority to sell the plant, and will turn it over to the company as soon as authorized to do so by the court.

Graphite Paint.

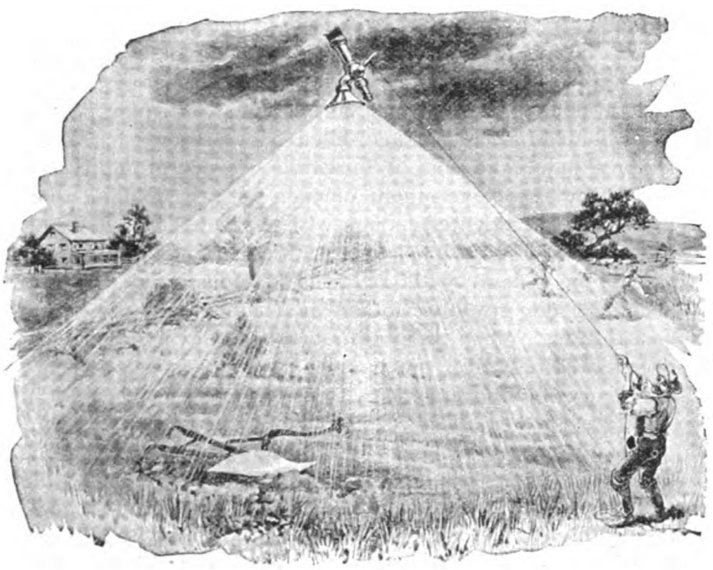
Twenty-five or thirty years ago the Dixon Co., of Jersey City, N. J., who even at that time were known the world over as the largest manufacturers of graphite products, began the manufacture and introduction of graphite paint. Ticonderoga flake graphite was used and thoroughly ground in pure, boiled linseed oil. Roofs well painted with this paint did not require repainting for ten to fifteen or even twenty years. In time all this became a matter of record, and people recognizing the economy, as well as the durability of Dixon's graphite paint and its great superiority over mineral paints, demanded that their roofs should be painted with it. "This demand, however, has led many painters to resort to sharp practices, or to make a graphite paint which they claim to be equal to Dixon's. Some painters are unprincipled enough to offer as graphite paint a compound having the color of graphite, but composed of stove-polish, cheap black lead, or even foundry facings, mixed with oil. Other painters, honest in their intentions, but ignorant that there is a vast difference in graphite, have used ordinary commercial black lead, ground with oil, expecting it would meet the requirements of their customers and prove lasting as the genuine Dixon graphite paint. So wide, however, is the difference in results, that experienced buyers insist on seeing the label on the package, or buy the paint themselves and have the painter apply it. Some time ago one of the departments of the United States Navy ordered 100 pounds of Dixon's graphite paint of a well-known dealer. The dealer, not having that quantity on hand in an original package, filled a keg from a barrel of Dixon's paint and sent it forward. It was promptly returned by the Government officials with the remark, that they had experimented enough with other makes and would only receive original packages. An experience covering a quarter of a century and over, has demonstrated that the peculiar flake graphite, mined at Ticonderoga, gives the best results. When the paint is brushed out each flake laps over its fellows, after the manner of fine fish scales, forming a covering of great elasticity and durability."

M. C. Henley, who is so widely known as a manufacturer, and who made a very large fortune several years ago in the roller skate business, is making active preparations to manufacture high grade bicycles, and is equipping his large plant at Richmond, Ill., with the best modern machinery designed for the purpose. His success in the business referred to, and the uniformily fine character of goods in this and different lines which he has since made, is sufficient to warrant the statement that the bicycles made by him will be thoroughly up to date, high class, high grade machines.

The Magnolia Metal Co., New York and Chicago, advise us that their business during the month of May has been the largest during the past two years, and that they have abundant evidence of a general revival in business. As their business is largely with the mills and manufacturers in all parts of the country, this is one of the best indications of the improvement which has been so long looked for in this country.

Farmers have taken to the bicycle in parts of Ohio, and they go to town on the wheel instead of driving. They make long trips in the same fashion to cities that hitherto they have seldom visited. One livery stable keeper in an Ohio town has bought some bicycles to rent. He says that everybody rides the wheel, while few persons ride or drive horses, so he is gradually changing the character of his business.—*New York Sun.*

The new refrigerating plant for the International Cooling Co., Atlantic City, N. J., will be designed and built throughout by the Berlin Iron Bridge Co., East Berlin, Conn.



Digitized by Google

THE BALL-NOZZLE: A MODERN WONDER.

It will pay one to visit the handsome quarters of the American Ball Nozzle Co., in the Roosevelt Building, Nos. 837–847 Broadway, at the corner of Thirteenth Street, and have a practical illustration of the working of this wonderful invention. The genial Mr. Pollock, the inventor of the system, took a HARDWARE reporter through the establishment, kindly indicating everything of interest, and in fact there are nothing but interesting things to be seen. In the cellar are located the machine shops and the workmen's shops. Here the ball nozzles are turned out in countless numbers, put together and packed. On the ground floor is the general display room, where numerous spectators are daily made acquainted with the many qualities and uses to which this great contrivance can be adapted.

The seventh floor is taken up by the offices of the president, vice-president, secretary, treasurer and general manager.

The Ball Nozzle consists of a bell-shaped nozzle and a hard rubber ball. This simple combination reverses accepted natural laws and baffles scientists. The ball placed

loosely in the bell defies the strongest pressure; one hundred, two hundred pounds of pressure of either air or water behind it will not dislodge it, and yet its resistance is so gentle that no pressure is given back to the pipe or hose. The Ball Nozzles are manufactured for fire hose, lawn sprinklers, fountains, tree and land irrigation, and wonderful results have been obtained when used as an air distributor.

In a plate glass room on the ground floor of the Roosevelt Building exhibitions of the Ball Nozzle in the field in which it will prove most useful, as a fire extinguisher, are given. This glass room is thirty five by eighteen feet and thirteen feet high, and is large enough to show the life and property saving qualities of the Ball Nozzle. An attendant clothed in oilskins enters the structure and shows the ease and rapidity with which the Ball Nozzle can be handled.

The Ball Nozzle permits the flow of the same quantity of water from the hose as a straight nozzle, without producing back pressure on the hose. A single man with one hand can manage it when it takes two or more men to manage a straight stream. It enables firemen to enter buildings in the face of flame and smoke, and to go with impunity to any part of a burning structure, fighting the fire at close range, covering the area quickly and effectively. In many cases the heavy straight stream does as much damage as the fire. The Ball Nozzle obviates this.

Immediately after the invention of the Ball Nozzle, it was adopted by the fire department of Des Moines, Iowa, the home of the inventor, and since then has been used by fire departments in other parts of the country. It has also, recently, been adopted by the Commissioners of the Fire Department of the city of Boston. The public tests made in that city proved most successful and the action of the wonderful new aid to conquering fire and smoke and saving lives and property met with the general approbation and praise of the assembled insurance and fire experts. The Ball Nozzle is said to be a most effective safeguard against fire in lumber yards. By the proper arrangement of the pipe system and the use of stand pipes with the Ball Nozzle at the top, a lumber yard may be made substantially fireproof. It also makes a beautiful fountain, and with ordinary pressure, covers a circle of forty feet, not with a thin spray, but with a heavy rain of large penetrating drops, covering more than twice the ground in less than half the time required by any other kind of lawn sprinkler, and it will save many times its cost each season by saving hose. There are no pins or fly-wheels, nothing about it to bend or break. Too often lawn sprinklers make back pressure and burst hose. The Ball Nozzle does not.

By running a small pipe from the bottom to the top of the tree, placing the Ball Nozzle at the top and attaching the hose to the pipe at the bottom, trees may be given a thorough washing and freshening, saved from destruction by insects, and kept fresh through any season; and in the case of fruit trees, a great increase in producing powers will be effected. This use of the Ball Nozzle will certainly became one of the most important features in tree culture and preservation. The Ball Nozzle may also be used with telling effect for irrigation purposes, as it quickly covers such a large area with penetrating drops.

In a prominent place on the ground floor of the company's quarters stands a heroic statue of a fireman holding on his left arm a babe and grasping in his right hand a fire hose equipped with a Ball Nozzle. Close behind this statue is a beautiful fountain thirty feet across. It is provided with the smallest sized Ball Nozzle lawn sprinkler, but even this sprinkles the entire surface of the fountain, showing conclusively what a lovely fountain can be maintained in country places or suburban residences.

The Ball Nozzle would no doubt prove most effective in the case of a fire in a hotel or large tenement house, where large numbers of lives would be in danger during a sudden conflagration.

The very clever electrotype given herewith shows the Ball Nozzle attached to the sky, and the farmer turning on the water so that rain will come down on the growing crops. Evidently, this farmer is up to date.

List price per dozen Ball Nozzle Lawn Sprinklers, ¾ inch: No. 6–J. Ball Nozzle Lawn Sprinkler, with Japanned Stand, Aluminum Elbow and Top, $18. No. 6–B. Ball Nozzle Lawn Sprinkler, with Polished Genuine Bronze Stand, Elbow and Top, $24. No. 6–N. Ball Nozzle Lawn Sprinkler, Stand, Elbow and Top, all Nickel-Plated on Bronze Metal, $30. No. 6–A. Ball Nozzle Lawn Sprinkler, Stand, Elbow and Top, Antique Copper Finish on Bronze Metal, $36. No. 3. Combination; Straight Stream, Spray and Shut off, Nickel-plated on Brass, $18, No. 4. Combination; Straight Stream, Spray and Shut off, Nickel-plated on brass, without Spike, $18. No. 5. Ball Nozzle for Fountains and Trees, Nickel-Plated on Brass, $18.

If one doubts the sterling qualities and efficiency of the Ball Nozzle, he should pay a visit to the company's headquarters and be convinced.

The ball does it all.

Digitized by Google

George Cassidy, representing J. D. Seeberger, wholesale Hardware, Des Moines, Iowa, conceived the above idea of the Ball Nozzle attached to the sky, and the farmer turning on the water to wet down the growing crops. He sent his postal card containing this picture, notifying his customers that he would call on them at a certain time and turn on the Ball Nozzle and give them needed rain, which would insure good crops.

Barnum's Wire and Iron Work.

Attention is called to the advertisement of the old established house of E. T. Barnum, Detroit, Mich., who manufactures a full line of Wire and Iron work. We are advised by them that many of the trade are carrying a line of lawn

goods in stock, such as iron reservoir flower vases, wire and iron settees and chairs, trellises, etc., also iron hay racks, oat mangers, saddle and bridle brackets, etc., as all these goods can be sold so much better from samples than from a catalogue. It will be to the advantage of the trade to send for prices, catalogues, etc.

Recent Trade Publications.

Edward Darby & Sons, proprietors of the Pennsylvania Wire Works, Philadelphia, have published a very attractive catalogue of their Wire and Iron Goods, including brass, copper, iron and galvanized wire cloth, wire window guards, wire work, iron railings, wrought iron and brass grilles, wrought iron window guards, brass bank work, radiator guards, nursery guards, wrought iron gratings, spark guards, roof crestings, stable fixtures, coal and sand screens, iron bedsteads, wire flower stands, sieves and riddles, adjustable window screens, screen doors, etc.; in short, "everything in wire and iron." It contains about 125 pages, every one of which is filled with descriptions and illustrations of the above goods. It would be difficult to think of anything under the above varied headings, which does not find a place in this work. In a note to the trade, the company say: "We present our revised catalogue for 1895, and trust you will find it of sufficient value to examine and preserve it for all your needs, both present and at any future time. Your attention is called to the numerous improvements, and to the new articles which we have added to our extensive list of manufactures; and also to take special notice of the changes in our lists. We take pleasure in knowing the fact that we are receiving a large increase of trade from our old customers, and also from many new ones, which is very gratifying to us, and assure those who intrust orders to us that it shall be our constant aim to endeavor to attend to the same promptly and satisfactorily."

The New York Belting & Packing Co., New York, are sending the trade a couple of illustrated sheets, one of which describes their various lines of Garden or Lawn Hose, among which may be mentioned their "1846 Para," "Double Diamond," "Carbon," "Double Diamond" Cotton Hose, "Spider" Cotton Hose, and "Spider" Hose. They also show a large line of Small Hose Fittings and appurtenances. Among them are the ball nozzle lawn sprinkler, hose clamps, hose pipes, hose bands, hose straps, hose couplings, hose menders, hose reels, etc. They say: "We are prepared to promptly fill orders for any and all kinds of brass goods, hose fittings, reels, pipes, etc., at attractive prices."

"Do you like noise?" is the question that stands out with startling distinctness upon a leaflet sent out by the Sabin Machine Co., Montpelier, Vt. It is addressed to carriage owners, and explains the character and workings of Hendry's Anti-Rattler Thill Coupling Spring, which the company are so successfully placing upon the market. They describe it as adapted to any coupling, easily adjusted, an oil tempered steel spring that holds the shaft in place without wear or rattle. It is made in five sizes—¾, ⅞, 1, 1½, 1¼ inches. The company will be pleased to send further information to all who are interested.

The Smith & Egge Mfg. Co., Bridgeport, Conn., have issued a convenient and attractive leaflet, giving the prices upon their Cable Chains and Sash Chains. Sizes and other descriptive features are also given. In addition to these, the company also make padlocks, drill chucks, plumbers' chains, sanitary chains, eight hooks, split links, basin discs, Eureka Patent Shears, buttonhole attachments and other patented specialties.

The Campbell Cutlery Co., Syracuse, N. Y., have published a catalogue showing their line of Show Cases and Store Fixtures, with special reference to Campbell's Practical Sliding Display Trays. Various illustrations of these goods are given, with sizes, finishes, etc. A new revised price list is also given.

The John Robbins Mfg. Co., No. 58 Kneeland Street, Boston, have published an illustrated catalogue of their railroad and hotel baggage and key checks, metal checks of every description, badges, plates, pew, door and chair numbers, rubber stamps, seals, etc. It contains near a hundred pages, and is well illustrated.

E. W. Bliss to Move to the City.

E. W. Bliss, one of Brooklyn's best-known business men, announced to his friends yesterday his intention of withdrawing from a number of large enterprises with which he is at present connected, and incidentally let it be known that it was he who recently purchased two houses in West Fifty-first Street, New York, with the intention of tearing them down, and building on the site a modern and costly dwelling. Mr. Bliss has withdrawn from the directory of the Brooklyn City Railroad Co., and will retire, it is said, from the vice-presidency of that corporation and from the vice-presidency of the Brooklyn Gas Fixture Co. He will retain for the present his connection with the E. W. Bliss Co. and the United States Projectile Co., in both of which he holds the office of president. "I want to take a little comfort in my declining years," said Mr. Bliss, smilingly, yesterday. "As soon as my plans are completed, I shall occupy a new house in West Fifty-first Street, to be built upon the site of two lots that I bought this week. I shall keep my Bay Ridge place for a summer residence."—*New York Tribune.*

The Mica Crystal Works in Warner, N. H., owned by Col. John A. White, were totally destroyed by fire recently. Loss $15,000. Partly insured.

The cleaners and warehousemen in the employ of the New Castle (Pa.) Wire Nail Co. have been granted an advance in wages.

Digitized by Google

Review of the Markets.

Money: The money market, like everything else, is feeling the effect of improving times. Wall Street has of late been very lively, and a great many stocks have changed hands. Holders seem generally to have confidence in the future. One of the main events touching the Hardware trade is the second collapse of the Cordage combine. Money is on call, 1@1½ per cent. Time money is quoted at 2 per cent. for ninety days, 2½ per cent. for five months, and 3 per cent. for seven months on good mixed stock exchange collateral. Commercial paper is quoted as follows: Prime endorsed bills receivable at 3½@4 per cent., choice single-name paper at 4@5 per cent., and good at 6 per cent. and upward.

Hardware: A cheerful feeling pervades the Hardware world, and dealers in general are confidently looking forward to a good fall business. Some think that a fall trade depends largely on the crops, while others to talk cheerfully is half the battle. Come what will, there is no denying the fact that business now is in good shape. Orders are coming from jobbers as if they really wanted to buy goods, no doubt with the view of accumulating stocks in anticipation of a general stiffening of prices. All goods whose prices are affected by the cost of raw materials are on the upward move, the most notable examples being wire and cut nails. The bicycle trade continues undiminished. The demand for the silent steed by all classes seems to be a veritable craze. There is also a fair call for lawn and garden goods. Some manufacturers declare that the season has been the best since 1892, many being obliged to work nights to fill orders. May this happy state of affairs continue.

Cutlery: The trade in domestic Cutlery is very good. A fair number of orders for prompt delivery are coming in. Good agents seem able to sell wherever they go. Cutlers are making preparations for a rattling fall trade.

Cut Nails: The Cut Nail manufacturers worked more rapidly than the manufacturers of Wire Nails, consequently the prices have risen in proportion. The combine of the Wire Nail concerns facilitated matters for the Cut Nail people, which accounts for their quicker organization. Prices will be maintained in sympathy with Wire Nails. The New York quotations are for carload lots on dock, $1.30; out of store, $1.40.

Wire Nails: The much talked of combine between the Wire Nail manufacturers of the country has been consummated. Fully 95 per cent. of the manufacturers are members of the Association. Negotiations to bring about this condition of affairs have been under way for some time, but now all the details have been satisfactorily arranged. The Association has been assured of the co-operation of some other concerns, who might otherwise produce a disquieting effect on the market. The executive committee of the Association will pass upon all such questions as the prices at which Nails will be sold, and the estimated demand per month. This kind of an arrangement will prevent a large accumulation of Nails which might clog the market. The prices for June have been given out as $1.20 for carload lots, at mill, Pittsburg. Quotations for less than carload lots, Pittsburg, $1.30. All prices will be governed by the Pittsburg base. New York prices are, carload lots on dock, $1.35; out of store, $1.55. At a recent meeting of the Shelf Hardware members of the New England Iron & Hardware Association, the price of Wire Nails was established at $1.60 from store and $1.25 in carload lots f. o. b., factory. Arrangements have been made between the New England Iron & Hardware Association and the Atlas Tack Corporation to have the factory price to New England points maintained by the Nail Association. Jobbers who secured large stocks of Nails at the old prices, could, no doubt, if they desired, sell at lower figures than the Association, but the temptation to reap a golden harvest will have the effect of maintaining the prices fixed. Some manufacturers look for a new card, but nothing can be said with certainty on the subject. As an inducement to large buyers, a rebate of five cents per keg, off the carload prices on lots of 1000 kegs, is allowed, providing such purchases are made within the calendar month.

Tacks: The combine of the Nail concerns has had a beneficial effect on Tacks. The market is in very good shape, and is still improving.

Nuts and Bolts: There is a better feeling in this line of goods, and manufacturers look for an advance in prices. This is made necessary by the raise in the prices of material. More definite information will be forthcoming when the result of the meeting of Nut & Bolt manufacturers, held in Cleveland, June 6th, is known. Nuts and Bolts are at present at a very low rate.

Hinges: We have just received from the Stanley Works, New Britain, Conn., and No. 79 Chambers Street, New York, a revised price list of Strap and T Hinges, adopted by the manufacturers on June 1, 1895, as follows:

Light Strap, No. 900.

3	4	5	6	7	8	10	12	14	16 Inch.
$1.10	1.45	1.80	2.30	2.80	3 25	4.50	6.50	8.50	10.50 Per Doz. Pairs.

Heavy Strap, No. 902.

4	5			6	8	10	12	14	16 Inch.
$1.70	2.30 Per Doz. Pairs			16	15	14	14	14	14 cts. Per Lb.

Light T, No. 904

3	4	5	6	7	8	9	10	12	14 Inch.
$1.25	1.35	1.70	2.00	2.30	2.60	3.25	3.80	5.15	6.70 Per Doz. Pairs.

Heavy T, No. 906.

4	5	6	8	10	12	14	16	18 Inch.
$1.65	1.90	2.30	2.90	4.25	6.00	8.20	10.00	10.65 Per Doz. Pairs

Extra Heavy T, No. 908.

5		6	8	10	12	14	16 Inch.
$2.75 Per Doz. Pairs.		17	16	15	15	15	15 cts. Per Lb.

Long Chest, No. 910.

6	8	10	12 Inch.
$2.30	3.05	3.40	4.95 Per Doz. Pairs.

Hinge Hasps, Nos. 912 and 914.

3	4½	6	8	10	12 Inch.
$1.90	2.45	3.10	4.20	6.00	8.20 Per Doz. Pairs.

Hinge Hasp Staples, No. 913.

3	4½	6	8	10	12 Inch.
$0.70	.70	.90	1 10	1.50	1.50 Per Doz. Pairs.

Crate Hasps (Single Swivel), No. 920 ..... 3 inch, $1.90 Per Doz. Pairs.
" " (Double Swivels), No. 918 ..... 3 " $1.90 " "
" Hinges, No. 916..... 3 " $1.10 " "

Patent Corrugated Steel Heavy Strap Hinges, No. 935.

4	5	6	8	10	12 Inch.
$1.70	2.30	3.25	5.20	7.50	11.00 Per Doz. Pairs.

Patent Corrugated Steel Extra Heavy Steel Hinges, No. 937.

4	5	6	8	10 Inch.
$2.00	2.75	3.60	6.00	8.00 Per Doz. Pairs.

Above List Prices are the same per dozen pairs as the regular Heavy Strap (No. 902), and Extra Heavy T Hinges (No. 908).

These Hinges are made on a new principle, and have many points of superiority over the old style Hinges. The corrugations about the joints greatly increase the strength of the Hinge, at the same time rendering it impossible for it to bind upon the Pin, no matter how rusty it may get. At the same time they are somewhat lighter than corresponding sizes of the regular Heavy Strap and Extra Heavy T Hinges, thus saving unnecessary expense for freight and making them easier to handle than the regular Hinges of corresponding sizes.

A discount of 80 per cent. was declared on the above.

No changes have been made on the following: Hart's Patent Light Strap, No. 928; Hart's Patent Heavy Strap, No. 929: Hart's Patent Extra Heavy T Hinges, No. 931; Wells' Patent Heavy Strap Hinges, No. 925, and Wells' Patent Extra Heavy T Hinges, No. 927.

White Lead, dry or in oil, Red Lead and Litharge in kegs: In lots of less than 500 pounds is quoted at 6 cents net; in lots of 500 pounds and over, 5½ cents. Zinc: Values remain the same for jobbing parcels at 3¾@4½ cents, as to quantity and quality. Putty: Prices are steady at $1.45@$2.25, as to style of packing. Linseed Oil: A fair business is being done on a basis of 56 cents.

Clapp & Co., bankers and brokers, New York, in their latest weekly letter, say: "Transportation facilities facilitate human brotherhood and usher in the Golden Age. The progress of the world is emphasized more in its improved methods of communication than in improved laws or morals. The next generation will enjoy an elbow touch with a world in which there will be few unfed, unclothed, or living in the wilderness. The generation born to abundance of gold, silver, iron, cotton, coal, electricity and foodstuffs will revolutionize methods and multiply blessings on every hand. Straws.—June 4, 1894, we said: 'The country is on the eve of great prosperity.' October 18, 1894, we said 'The verdict of the people is likely to renew confidence

Digitized by Google

the stability of American methods, finances and industries.' February 14, 1895: 'The persistent faith of investors seems likely to secure the reward it deserves.' United States railways carried 60,000,000 tons more freight in 1894 than all the railways, steamship and sailing vessels of the balance of the world combined and at lower average rate of freights. Statistician Mulhall says the United States has the greatest productive power in the world, and increased its wealth in the past thirty years more than the total wealth of Great Britain! That the United States possess as much energy as Great Britain, France and Germany together."

The prices quoted below are for small lots. Round lots, except Tobin Bronze, can be purchased at lower prices:

Copper.	
Lake, ingot ₩ ℔	10½
Arizona & Baltimore Cast'g	10½
Ansonia "A" Casting	10¼

THE PHILADELPHIA TRADE.

The long lane seems to have reached the end at last, and after sixteen years of steadily declining prices, the market has apparently reached the bottom and has now begun to tread the upward path.

Prices almost without an exception are decidedly firmer, and in many cases have advanced. Jobbers are sending out numerous bulletins to their salesmen advancing prices to keep up with the market; manufacturers who have formerly scoured the country for orders, are now busily at work with enough orders booked to keep them busy for months, and many are indifferent regarding new orders.

So far the advances in prices have been exceedingly moderate—surprisingly so, when it is to be considered that prices for the last two years have not only been at the basis of cost, but in many cases have been below actual cost, so that manufacturers have found themselves out of pocket at the end of the year.

The advances hitherto made have barely covered the increased cost of material and wages, and now that the factories have begun to pick up, it is to be expected that a further advance will be demanded in wages, and everything seems to point to still higher prices.

Labor is now generally employed, and the purchasing power of the people has been greatly increased by the more general employment and by increased wages; this should mean a large increase in the volume of business, and better times all around.

We are glad to report that trade continues to be brighter, and as compared with last year, the last two months have shown a handsome improvement, with every prospect for future improvement.

The changes in prices of the last ten days are too numerous to mention in these columns, but it may safely be said that all the goods that are near the raw material have advanced, and will probably go higher in the next few weeks.

The most notable advance has been that of Cut and Wire Nails. It has been known for a long time that these goods were sold below cost, and now that a strong combination has been formed with great enthusiasm among the participants, there is every reason to believe that prices will be higher and will be maintained. Since this agreement has been made, the price of raw material has advanced so much that Nails have gone even higher, and it is not unreasonable to look for higher figures by July 1st. At last the manufacturers of Nails seem to realize that there is more profit in co-operation than there is in competition. When will the rest of us, jobbers and dealers, be wise enough to come to the same conclusion so that we may "live and let live?"

BIDDLE HARDWARE CO.

THE CLEVELAND TRADE.

Since our recent communication to you, trade conditions have remained substantially the same as outlined in that letter. The advances that have been made have been well maintained, and further advances have occurred in some lines.

The volume of business is very satisfactory, and everything points to a new era of prosperity. Whether it will be a permanent revival, with the steady advances for some time to come, is a question that is difficult to answer, but we believe, that for the next six months at least, our friends are safe in carrying good stocks, and the probabilities are that the demand will be all that could be desired. Seasonable goods are moving in large quantities, the Bicycle famine still continues, and as written above, everything looks favorable.

THE MCINTOSH-HUNTINGTON CO.

THE CHICAGO TRADE.

Business for the last two months has been of a more satisfactory nature than anything we have had now for nearly two years. Indications from quite a large percentage of the territory that we sell goods in point to a continuation of these conditions, and the general outlook throughout the country is of a more encouraging nature. It would seem as if the bottom had been actually touched, and the climb on the other side of the hill had begun. Of course the first things to feel a condition of this sort are staple articles, and we already see the result of the better feeling existing, and the increased purchasing power of the country, in the advances that have recently taken place in lines that are very close to raw material, and we hope that this will be followed in the near future by moderate advances in manufactured goods. There are spots of course around through the West that have been quite seriously affected by the heavy frosts that we have had for quite a time during last month, and there are other sections that are suffering quite severely now for rain. Still the outlook as a whole is certainly much better than anything we have seen for a long time past.

WOODROUGH & HANCHETT CO.

THE DAVENPORT TRADE

There was more excitement in the Hardware market during the last half month than at any time since 1879. The price of Nails has gone skyward like a rocket, and jobbers who only a few weeks ago were more than anxious to give Nails away, now "Grapple them to their souls with hooks of steel."

There is a new list and higher prices on Strap and T Hinges and Steel Squares. A new Basket combination has been formed, advancing prices, of course. Fence Staples, Fence Wire, Bright Wire Goods, Silver Plated Ware and Wrought Iron Goods have already advanced and are still on the incline. Another advance is anticipated in Carriage Bolts, Wood Screws and Rivets.

The sudden advance in wheat, the favorable reports of growing crops, together with the rapid upward tendency in all lines of staple Hardware, has stimulated trade; and merchants are buying freely, and in many cases they are anticipating their wants for fall trade.

We welcome the better times and improved conditions, and trust they will remain long with us; but hope, however, that the brakes will be applied in time to prevent anything approaching a commercial boom, with the consequent disastrous reactions, that would result from its occurrence.

SICKELS, PRESTON & NUTTING CO.

My dear, dear Lord,
The purest treasure mortal times afford
Is spotless reputation---That away
And wheels may be painted iron or gilded clay;
An honest cycle that has stood the test,
Is the famous one with the Humber crest;
In quality is its fame; both grow in one;
Take quality from it and its fame is gone.

HUMBERS have been the favorite Bicycles of two generations of riders. They are still the STANDARD.

Humber & Co., America, Ltd.,
No. 318 Broadway,
New York.

THE GRAPHITE TRADE.

The business of May sums up just about as we expected it would, the marked increase being in Pencils and Crucibles, followed closely by Lubricating Graphite and Cycle Chain Lubricant. The total sales of all our graphite products being decidedly satisfactory, the month closing with liberal orders for June delivery. While the general business of the country warrants a certain percentage of the increase, we feel that we are ahead of the times, as we have been unremitting in keeping ourselves in the foreground, and in perfecting our products. During the duller season active preparations were made by the introduction of up-to-date machinery and reorganization of factory facilities, to meet the demand of later good times, and we are being repaid.

Our Vice-President, Mr. John A. Walker, sailed May 29 on the *Paris*, accompanied by Mrs. Walker and a niece, and will spend his well-earned vacation in England and Scotland, and possibly a short stay on the continent.

Collections are up to the average and cause no trouble.

JOSEPH DIXON CRUCIBLE CO.

THE VARNISH TRADE.

The Varnish and Coach Color market has shown considerable life during the last few weeks. The season has been late in beginning, but is much more satisfactory than it gave promise of at the start. Collections are greatly improved, and we anticipate a constant change for the better in the near future, both in orders and payments. The outlook is certainly most encouraging.

No. 45 Broadway, New York. EDWARD SMITH & CO.

The Cleveland Steel Co., Cleveland, Ohio, will soon launch a new enterprise which will give employment to many men. Heretofore the company has confined itself to rolling steel, but in the future it will also turn its attention to copper and tin. The rolling of copper will be an innovation in Cleveland; in fact, there are but few mills in the county. Vice-president J. A. Potter claims to have invented a new method of polishing, which will be used on the copper plates as well as the steel. He says the polish will be of an exceedingly high class, and he feels confident that it will be a success. This mill, which was formerly known as the Britton Iron & Steel Mill, has been greatly improved recently. An immense new Corliss engine has just been put in operation, and the entire plant is run automatically.

A building that will materially improve the appearance of Detroit Street, Cleveland, is being erected on the northeast corner of Detroit and State Streets, by the Cleveland Steel Range Co. It will be equipped with all the latest improved machinery for the manufacture of stoves and ranges. The building is three stories high. Its dimensions are 60x200 feet, and it will cost, when completed, in the neighborhood of $50,000. It is built of brick. About July 1st the company expect to start the factory with a force of from seventy-five to one hundred men.

H. C. Searles and James T. Diehm have purchased the plant of the Akron Hardware & Stamping Co., Akron, Ohio. They will carry on the extensive business of this company as heretofore, at the works on Stanton Avenue. Mr. Searles, who has been manager for some time, will have charge of the factory, and work will continue without delay. It is announced that the increase in business enjoyed by this company in the past six months has been so marked that it is crowded for room to fill the orders, and that additional buildings will soon be built. The company are at present finishing an order for 70,000 bicycle seats.

The Standard Stove Range Co., Terre Haute, Ind., are having their building repainted both out and inside. In the near future they will be ready to increase their force of men to twice the number as at present.

WARNER BURGLAR PROOF LOCK.

The Cheapest, Strongest, Lightest Dead Rim Lock made.
Write for Prices and Circulars.
THE WARNER LOCK CO.,
412 Manhattan Bldg.,
Chicago, Ill.

Walter W. Woodruff & Sons, Mount Carmel, Conn., have issued under date of June 3rd a circular letter, in which they say: "In view of the considerable improvement in trade, we beg to suggest to our friends the advisability of a little more anticipation of their wants, and an earlier placing of their orders with us than during the past two years. We are now a good deal behind in our orders on several lines of goods, and the outlook is fair for a continued good trade. Prices are extremely low. A reasonable placing of orders ahead of present wants is safe, and will in all probability be advantageous to you—not only in matter of price, but in avoiding the annoyance of not having orders filled as promptly as wants may require, as is now the case in many instances. Kindly accept the suggestion in the spirit in which it is made—that of mutual benefit."

So high an authority as HARDWARE, a publication that is specially devoted to iron and steel in their manufactured forms, says it is doubtful if such a condition of affairs as exists at the present time in the bicycle business has ever before been witnessed in this country. There are over eighty manufacturers of wheels, but all find themselves swamped in the rush of orders which has come to them since they thought they had completed the season's business early in the spring. They are unable to supply the increasing demand for high grade wheels.—*Bloomington (Ill.) Leader.*

The Berlin Iron Bridge Co., East Berlin, Conn., are the engineers and architects for the large three-story building which the Union Metallic Cartridge Co. are now putting up at Bridgeport, Conn. The entire frame work of the building will be of steel, with brick walls, and all appliances for making the construction as nearly fireproof as possible.

The Apollo Iron & Steel Co. have engaged the firm of Olmstead, Olmstead & Elliot, Boston landscape artists, to lay out near Apollo, Armstrong County, Pa., a model town to bear the good old Dutch name of Vandergrift. The land purchased embraced 800 acres; 100 acres have been reserved for the mills, which will be removed from Apollo and will employ 1600 men.

The Girard Stove & Foundry Co. will move their plant to Youngstown, Ohio, commencing next week. The location selected immediately joins the company's Youngstown plant on West Federal Street. A warehouse, 40x100 feet, will be erected. After the entire works are in operation seventy-five employees will have their names on the pay-roll.

C. F. Guyon Co., No. 97 Chambers Street, New York, are placing upon the market for the use of bicycle riders, Bond's Non-Corrosive Lubricant, for use on the chain and sprocket. They say that it is composed of five of the best animal products known to science, and is solidified with a small amount of specially prepared East India Plumbago.

The New York office of the Simonds Mfg. Co., Fitchburg, Mass., has been removed to No. 42 Cortlandt Street, and is in charge of Manager L. A. Kimball. This change is to give them more room for the carrying of stock.

The forge department and the nail mills of the Laughlin Co., at Martin's Ferry Ohio, have been started up.

Philip Wallach, who kept a small Hardware store at No. 1084 Third Avenue, New York, was found dead there from gas asphyxiation at five o'clock some mornings ago. He lived with his wife in the rear of the store. The wife retired early, leaving her husband in an adjoining room. She awoke at five o'clock and found that he had not gone to bed. Then she went into the other room and found him lying on a lounge. The gas was turned on, and the man was unconscious Mrs. Wallach called in a physician. Efforts to revive the man were of no avail. Mrs. Wallach said she knew of no reason why her husband should have killed himself, if he did.

The Magic Introduction Co., No. 371 Broadway, New York, are pushing with considerable success Lustronape, which is a specially prepared cloth for the removal and prevention of rust upon gold, silver, brass and plated-ware. It is used as an ordinary cloth, and will dry the table silver in place of an ordinary towel. Does not soil the fingers or clothes, and will not scratch. It is prepared in sheets 9x24 inches, each piece put up in an envelope with directions for use, and retails at 10 cents; trade price sample dozen, 87 cents; $9 per gross.

The plant of the Buffalo Brass Works at Depew, N. Y., was destroyed by fire some evenings since. The fire was discovered at 7:30 o'clock, and although the firemen worked hard to get control of the flames, their efforts were without avail, and at 9 o'clock the whole building was in ruins. The origin of the fire is a mystery.

Hadlock, Whitcomb & Co., saddlery, Hardware and harness dealers, No. 97 Crown Street, New Haven, Conn., have filed a voluntary assignment. The liabilities are estimated at $10,000 and the assets $12,000.

The Charles A. Wood Co., dealers in builders' supplies, Cleveland, Ohio, made an assignment recently. The assets of the company were $110,000 and the liabilities $70,000.

The Malleable Iron Fittings Co., Branford, Conn., have placed the contract for their new foundry building with the Berlin Iron Bridge Co., East Berlin, Conn.

The rolling mills of the Illinois Steel Co., at Joliet, Ill., are running at full blast giving employment to 1000 men.

THE ROYAL DOOR CHECK AND SPRING.

The Latest, Cheapest, Best.

Patented, Sept. 11, 1894.

Simple, Compact, Strong, Durable.

The ***Royal*** has a ***compressed air check.*** No liquids to freeze up or leak. Doors open easily. No back suction. Easiest attachment. Does not require a skilled mechanic to put them on. Improved ratchet for increasing tension on spring. Will fit right or left-hand doors.

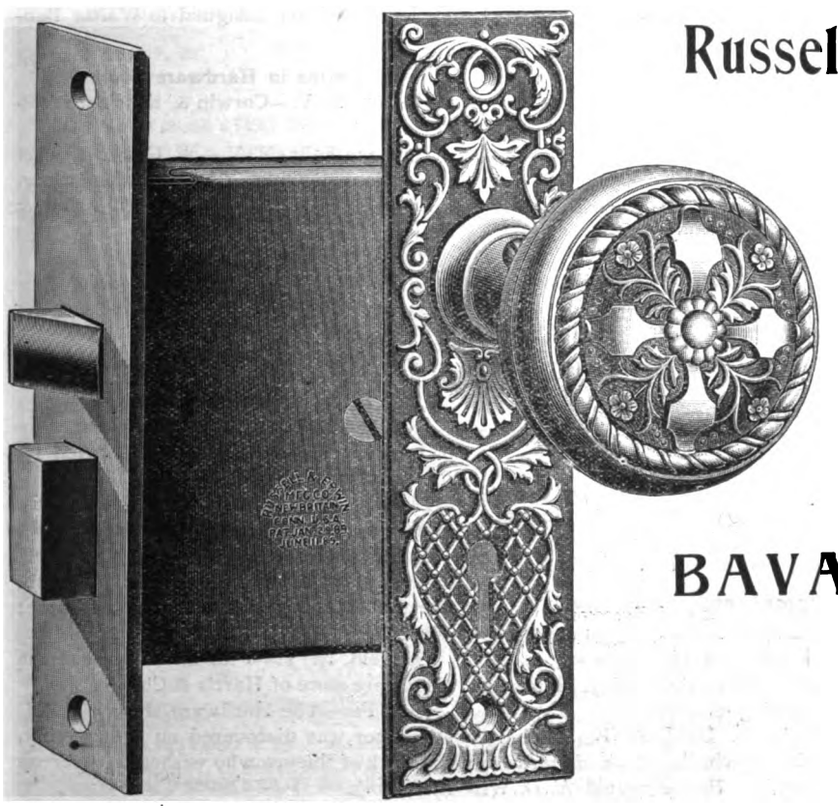
PRICE-LIST:

	BRONZED.
No. 1, for Light Screen Doors	each, $2.40
No. 2, for Medium Inside Doors	" 3.30
No. 3, for Large Inside or Small Store Doors	" 4.30
No. 4, for Large Store or Vestibule Doors	" 5.60
No. 5, for Extra Large Doors	" 7.00

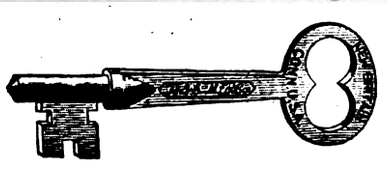
Packed One Dozen in a Case. Write for Trade Discounts

DIRECTIONS.

Place the shoe (S) in an upright position on the door, about six inches from back and flush with the top; *fasten securely;* slide the check into the shoe until the lugs (B) fit solid, then put in the end-screw (D). Bring arm (L) down to the transom-rail till it rests firmly, then put in the screws and the spring is ready for adjustment.



HOW TO ADJUST IT.



The thumb-screw (E) regulates the air check. A very slight turn changes the result. If the door slams, tighten it up. If it checks too soon, loosen it. It should check about three inches from the closing. If the spring is weak, increase the tension by turning up the ratchet-wheel (C) one cog. Care should be taken that the spring is not made too strong. If the spring swings the door easily, it is strong enough. Regulate the closing by the screw (E). In case that the transom-rail has a raised moulding, shorten the arm (R) by changing it into the next hole. Also, in putting the arm on the pintle, see that it is *securely fastened* and *rigid.* The checks are reversible for right or left-hand doors by simply changing the arms from one side of the pintle to the other. Follow the above directions, and the spring will give good satisfaction.

Shrewd Hardware Dealers

KNOW THE VALUE OF FINE STEEL OVER INFERIOR GRADES. . . . .

THE FRAMES OF

HELICAL TUBE PREMIERS

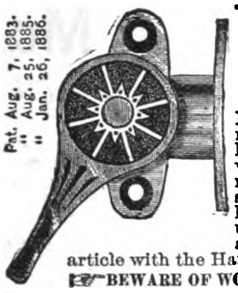
Are made of finer steel than can be used in any other bicycle, resulting in lighter wheels combined with greater strength. We are placing agencies with responsible parties only, and if there is no "Premier" agency in your town it will pay you to write us for catalogues and terms.

PREMIER CYCLE MANUFACTURING CO.,

34, 36 & 38 Watts Street, New York

When selecting a bicycle to represent during the coming season, consider ultimate results.

The "DORSETT" is here to stay. It represents every feature of the best wheels on the market with added points of novelty and merit that are bound to make it a "seller."



Interchangeable methods of cycle propulsion presented in the simplest and most efficient mechanical constructions, and perfectly independent of one another.

With the principles exhibited in a practical manner, and construction "special" in every part, the "DORSETT" represents the highest perfection in the art of bicycle making.

Send for catalogue which tells you all about details.

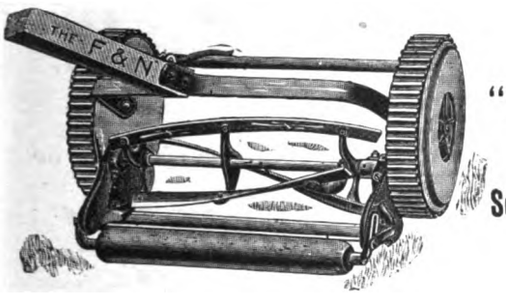
SPRING CATALOGUE No. 9 ISSUED IN FEBRUARY.

Truss Bottomed FIBER Pails



Overcome all objections. They are not clumsy, partially water-proofed, brittle; their bottoms do not warp out, nor swell and shrink and get loose. They are strong, elastic, thoroughly water-proofed, more capacious than other makes, and handsomely finished; while the truss bottom holds up its load, but is immovably affixed to the pail. Every man and woman who sees wants them. To introduce them we will ship a trial two dozen to any dealer on receipt of $5.00, or we will send to him free, express charges unpaid, a sample pail.

THE BERRY CLOTHES SPRINKLER

Patented.

Fills automatically and will enable you to iron your clothes immediately after sprinkling, if you so desire.
For starched clothes it is unsurpassed.
It is an excellent sprinkler for house plants.
It is capital for laying the dust while you are sweeping.
Long used carpets can be made much brighter by putting a few drops of ammonia in water and sprinkling before sweeping. Retails for 25 cents.
Liberal discount to the trade. Send for price.

WOOD MANTELS.

PERSISTENT

Enterprising people are beginning to learn the value of advertising the year round. The persistency of those who are not intimidated by the cry of "dull times," but keep their names ever before the public, will surely place them on the right side in the end. Think over the persistent advertisers you know.

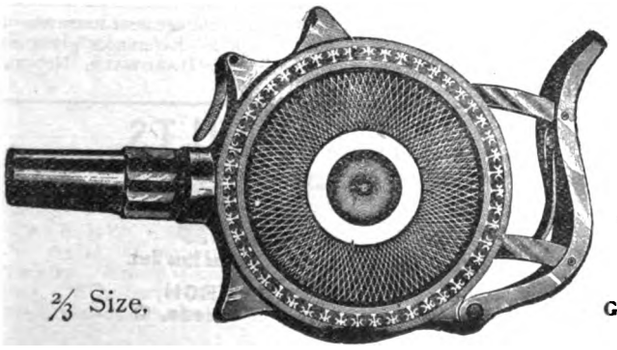
BEST AND CHEAPEST
STONE WATER FILTER
ON THE MARKET.
Tripoli Stone Block System.



Set up ready for use. There are two crocks, each of four gallons capacity—an upper one holding the Filter Block, and the lower one, which can be used as a water cooler if desired. This Block is four inches in diameter by the same in height, and is hollowed out on inside. This fits on a metal tube, which fastens by means of a nut to bottom of Filter Jar. Block can be lifted off tube, cleaned and replaced in two minutes, and with no trouble at all. Water passes from outside of block, through the walls, into the hollow chamber, and from thence, by the means of the Drip Tube, into the lower receptacle.

The Finest Piece of Salt Glazed Stoneware Ever Offered the Public.

F. H. WEEKS - AKRON, OHIO.

"PROTECTOR" REVOLVER.

⅔ Size.

A New Departure in Small Arms.

Superior to all others for close contact and rapid action. Seven shots. Can be carried in the hand ready for action without attracting attention and as easily withdrawn from the pocket as a watch.

The ammunition used is the Winchester Metallic Cartridge No. 32, extra short, rim fire.

Prices and discounts upon application.

COPY OF LETTER.

SPRINGFIELD, OHIO, February 21, 1895.

IRWIN AUGER BIT COMPANY, Wilmington, Ohio.

Gentlemen:—We send by same mail one of your Machine Bits, which, without dressing or handling in any way, has bored 57,000 holes 4 1-2 inches deep, and is still good. It has such a record that the party felt you would be glad to know it. Yours, etc.,

THE SPRINGFIELD HARDWARE CO,
Per Wiseman.

STANLEY'S PATENT
Roofing Bracket.

STANLEY
Rule & Level Co.
New Britain, Conn.

SOLD BY ALL HARDWARE DEALERS.

The parts are of Spring Steel, firmly riveted together. Push the beveled ends up under two layers of shingles, already nailed down; the Bracket has two separate bearings on the roof, and is so formed that any increase of pressure from above, increases its stability.

One dozen per minute can be placed in position, or removed; and great economy in lumber and nails will be found. There are no loose parts to get lost; and no nail-holes are made in the roof. In constant use these Brackets will last a life-time.

No. 1. Roofing Brackets, 8 inch, ½ dozen in box. Per Doz., $3.00

EXPANSION BOLTS.

High Grade
Buffing Wheels,
STANDARD GOODS AND SPECIALTIES.

The quality speaks for itself. We have the only plant in existence devoted exclusively to the manufacture of a full line of High Grade Buffing Wheels. Our Catalogue is an ornament to any office; a postal card secures it. "The quality controls the price."

DIVINE BROTHERS,
CHADWICKS, N. Y.

NOTICE.

GENTLEMEN:—On and after March 1st, the business heretofore conducted by me will be continued by a Company, to be known as
The Estey Wire Works Company.
Thanking you for favors received in the past, I bespeak a continuance of your patronage under the new organization and trust that the same pleasant relations existing between us may be continued.
Yours truly,
W. S. ESTEY.

As above announced we have succeeded to the business of W. S. ESTEY, and trust that we will merit a continuance of your valued orders as heretofore extended to Mr. W. S. Estey.
Yours truly,
ESTEY WIRE WORKS COMPANY
March 1, 1895. 65 Fulton St., New York.

ORANGE SPORTING POWDER, MANUFACTURED BY LAFLIN & RAND POWDER CO.

ORANGE RIFLE EXTRA, ORANGE SPECIAL, ORANGE DUCKING, ORANGE LIGHTNING.

The attention of TRAP AND FIELD SHOOTERS, RIFLEMEN AND DEALERS IN GUNPOWDER, is called to the new ORANGE SPORTING POWDER, patented April 17th, 1888, and branded **ORANGE RIFLE EXTRA.**

This Powder is quick and strong, and burns with such perfect combustion that the only residum left in the barrel after shooting is a dark oily substance easily removed While this Powder is not exactly SMOKELESS, it gives only a light bluish smoke, which is almost instantly dissipated, and interferes but little with the shooting of the second barrel, taking the place of the so called smokeless powders in this respect.

This brand of powder sells at the same price as any other brand of Rifle Powder and is superior to any made. No person who shoots can afford not to give it a trial, as after once trying it he will never use any other Powder when he can obtain the ORANGE EXTRA. Weight and quality guaranteed.

MILITARY, MINING AND BLASTING POWDER.

PLACE THE MATTER CLEARLY.

To make a man realize an idea as you realize it, is what is necessary to make him understand his needs. Advertisements should aim to place a matter so clearly before the public that they see it as clearly as the advertiser does.

Digitized by Google

IT TAKES A PULL

to separate the plies of our rubber belting. A yoke of oxen can do it, but hard service won't, so strong is the friction. Our belting is uniform in width and thickness, consequently more of its surface comes in contact with a pulley. That means

NO WASTE OF POWER.

Rubber belting is never injured by water, hence it is best for out-door use, for wet localities, and for mills where the atmosphere is surcharged with moisture or steam, as in paper mills, tanneries, etc. Buy the durable kind, branded 1846-Para, Double Diamond or Carbon, made for 50 years by the

NEW YORK BELTING & PACKING CO. LTD

American Lead Pencil Co.,

429 Broome Street, New York.
110 Cheapside, London, England.

113. "CARBON" PENCIL.

TO obviate that tired feeling and dull pain in the fingers, which invariably accompany the use of the ordinary black lead pencil whenever too much pressure is brought to bear or it is used any length of time, and at the same time to produce an article that is very smooth, very black and very firm, thus adapting it for all kinds of work where a fine, smooth, black and legible mark is required, this pencil cannot be too highly commended. For writing on soft paper it surpasses anything heretofore produced; and for sketching, draughting and heavy shading it is indispensable.

Dozen mailed on receipt of 50 cents. Samples, Catalogue, Information upon Application. Address

American Lead Pencil Co., 429 Broome Street, New York.

The AMERICAN WICK is made on scientific principles. The gum inherent in the natural cotton is taken out, and no expense is spared to produce a wick that will give THE **GREATEST ILLUMINATION.**

THE
AMERICAN WICK
Made by the
WICK DEPARTMENT
Of the STANDARD OIL CO. of NEW YORK.

Oil drawn up through the AMERICAN WICK burns with a large, clear, white light and the flame does not drop off in size as it does when a poor wick is used. When the cotton is clogged with its natural dust and gum the full illuminating power of the oil is not obtained and the complaint is heard that the light **DROPS.**

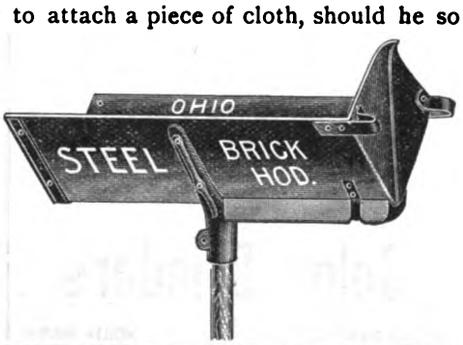
OHIO "WATER TIGHT"

STEEL MORTAR and BRICK HODS



OHIO "Water Tight" Steel Hods are from 25 to 50 per cent. lighter when in use than the common wooden Hod.

Ohio "Water Tight" Steel Hod bodies are positively Water Tight. These bodies are the only ones made, folded from a single piece of sheet steel without cutting the metal, are reinforced on the edges and at the dumping point By our special devised machinery we are enabled to furnish the strongest, lightest, most durable and only double end mortar and brick hods offered to the trade.

Our improved Malleable Iron Fork and Wooden Shoulder Saddle make it easier for the user to carry, or to attach a piece of cloth, should he so desire, to the under side of the saddle than the old style.

With our improved one piece Malleable Iron Fork and socket for holding the hardwood handle and taking up the shrinkage, a broken handle can be readily replaced, and hods shipped knocked down.

Prices are going up. Wages are going up. Dealers are buying with new eagerness, and manufacturers are busy. A new note of pleased anticipation and hopeful prophecy runs through the letters of our correspondents in recent market reports.

Why Called "Crowbar?"

A correspondent of the New York *Sun* asks: "Why is a crowbar called a crowbar?"

The most obvious answer to this apparently foolish question would be: Because it *is* a crowbar. On second thought, one sees that the answer is not adequate, and the question not foolish. It is easily understood why the implement is named "bar," but why "crow?" The dictionary makers are silent as to the primal meaning or derivation. Webster says: "A bar of iron sharpened at one end, and used as a lever." The Century dictionary: "A bar of iron with a wedge-shaped end, sometimes slightly bent and forked, used as a lever or pry. Also called simply crow." The Standard dictionary: "A straight iron or steel bar, always flattened or squared, and sometimes bent at one end, often furnished with a claw at one end and a point at the other: used primarily as a lever." So far, so good. But none of them goes far enough.

We would be glad to hear from the philological savants of the Hardware trade. Where does the word "crow" come from, and what does it mean in this connection? Is it because the bar is black, or that its use enables man to crow over the forces of nature?

The correspondent who furnishes the most reasonable explanation will receive HARDWARE free for the coming year.

The Passing of the Horse.

The wonderful development of natural forces, as applied to the uses of man, that is going on so rapidly and relentlessly about us, causes many changes in the economy of civilization. In no direction, perhaps, is this more manifest than in the displacement of the horse. Any careful observer will note the quiet but great change that has taken place during the last few years, in relation to the practical uses of this animal—so long the ever necessary servant of man. It is clearly apparent that the day of the horse is about at an end.

For some time to come, a comparatively few may be used for convenience or as a luxury, but eventually, like the candle which we now and then see, he will practically pass out of sight. Evidences of this may be seen upon every hand. We hear the owners of livery stables bitterly complaining of the great falling off in their business. This is especially true in the country, where formerly the young men were wont to take their best girls out for a drive, or went in parties by themselves to favorite resorts.

Now all this is changed. Bicycle parties are the popular feature everywhere. In Chicago recently there were three thousand wheelmen in parade line; and it is estimated that in that city alone, there are fully one hundred thousand cycle riders. Multiply this fact by the country at large, and one can gain some idea of the present use of the bicycle as a means of transportation. Some may say that the present bicycle boom is but a passing craze. Any bicycle rider who has felt the exhilarating and health-giving results of cycle exercise, will soon dispose of such a supposition. No, the cycle will stay; progression is the law, and events do not move backwards. Still greater improvements are in store for the wheel, and a more extended use will follow.

The electric car has forever banished the horse car, even in the smaller towns of remote civilization. Many private teams that were formerly kept for family use, have been disposed of by their owners; some through timidity in consequence of the great danger in private driving among the electric cars and bicycles, and many because of the advantages from the numerous trolley and cable lines, or the preference of the younger members of the family for a wheel over a horse.

Electric car plants have become so numerous that it must be a pretty small place that cannot boast of an electric plant for light or car service. The signs of the times point to the electric buggy and other electric conveyances, as being near at hand. Thousands of intelligent minds the world over are intently studying electric phenomena, and some early day the world will be astonished by some lucky inventor, who will exclaim: "I have found it!" With a cheaper method of generating the current, or a more practical system of storage, will come the advent of electric conveyances of all kinds. The electric buggy is already in this country, and express wagons propelled by electricity

Digitized by Google

have already appeared upon the streets of Paris. A significant hint is found in this news item, flashed from Paris only a few days ago:

The race of horseless carriages from Paris to Bordeaux and back, a distance of 750 miles, which was started at noon on Monday, was finished to-day and was won by Carriage No. 5, which arrived at the starting point in the Place d'Armes at 12.57 P. M., having covered the distance in a little over forty-eight hours. The winning carriage is constructed on the Pachard-Levasseur system.

The present price of horses shows the tendency of events; and those whose business is in any way connected with supplies for the horse, will do well to note the signs of the time.

In a recent number of *Munsey's Magazine*, we find these suggestive words:

The ordinary, everyday horse, is certainly doomed. The extent to which electricity has discredited and replaced him is exemplified by the fact that it no longer pays to breed horses that command but a moderate price. This assertion, startling as it is, is verified and even emphasized by the reports from different horse marts. It appears that last year the breeding of ordinary horses was discontinued all over the United States, and the majority of breeders have adhered to the same policy this season. Yet, in spite of the precaution, prices are steadily declining. At a recent sale in New York a team of six-year old cobs, warranted sound and kind, went for $120; a pair of large horses, having good knee action and being of excellent appearance, sound and kind, brought only $225, or $275 less than they were sold for two years ago. Machinery is responsible for this state of things—machinery driven by electric, steam, or cable motors. Of a total number of 11,030 miles of American street railways, over 5750 are operated by mechanical power, which propels 6732 electric, 3317 cable, and 1044 motor cars. A street railway concern generally engages ten horses for each car in use. It would, therefore, follow that by the introduction of the trolley and other mechanical devices some 110,000 horses were thrown out of employment—a number exceeding that now employed by street car companies in the United States by 20,000. Over one-half of the eighty street railway lines now in course of construction contemplate the employment of other than animal power. Five years more, and horse cars will be a curiosity in any but the smallest towns and villages of America. This is a remarkable achievement, full of promise from a sanitary and commercial standpoint, and one that speaks volumes for the push and energy of American inventors. While European engineers, as intimated, spent years of time and labor in constructing a one or two horse power vehicle—which we are about to adopt and convert to our own uses—we established the gigantic cable and trolley system that inevitably means death to all antiquated forms and methods of animal power.

Cabmen and liverymen will in the future drive and keep for hire motor carriages promising better profits and involving less risk. The expressman's and truckman's business will be reorganized on a broader, more economical, more humane basis. Our cities will be healthier, their suburbs more accessible. The horseless vehicle will be a genuine boon to civilization.

Russian Diplomacy.

The Russians have long been famed as a nation of diplomats, and what they fail to accomplish by force or intimidation, they bring about through statesmanship. Their latest apparent triumph of this character is embodied in a commercial treaty with Japan. The object in view is to do away with the successful competition of America in Japanese markets. The new ordinance provides that duties levied on petroleum imported into Japan shall be on volume and not on weight. Such a measure will offset the advantage hitherto possessed by American dealers, as American oil is lighter than the Russian product, though the latter is cheaper. American concerns are not afraid, however, as the treaty existing between this country and Japan bears the "favored nation" clause, and, no doubt, if American interests materially suffer through the ruling of the Russo-Japanese treaty, the State Department may be relied upon to promptly remedy the existing evil.

In connection with the recent legal victory of C. E. Jennings & Co., spoken of elsewhere, a few words about Hack Saws will not be out of place. Prior to Mr. Griffin's patent, all the Hack Saws were imported from Sheffield, and were costly affairs which were kept in condition by filing. Mr. Griffin's invention revolutionized this branch of saw manufacture. America now exports these saws to the country where she was formerly forced to buy, and there is practically no foreign competition in this line, the saws being used in England, Germany, Australia, South Africa, and many other places. The beauty of the Griffin Saw is that it can be used by anyone, and will saw brass, iron, steel, lead pipe and metals of all kinds. The blades were designed so they could be thrown away when dull, as a new blade costs less than the cost of sharpening the old one, and it would be impossible to sharpen an old one, as the blades are too hard for a file to touch.

At the annual meeting of the American Association of Tin Plate Manufacturers held recently in Pittsburg, the following officers and committees were elected: President, W. G. Graham; vice-president, Warner Arms; secretary, John Jarrett (re-elected). Executive Committee, Alfred Marshall, C. R. Britton, B. M. Somers, W. B. Leeds, William Banfield, T. K. Niedringhaus, W. C. Cronemeyer, George Greer and A. W. Brown. Conference Committee: W. G. Graham, Warner Arms, W. B. Leeds, George Greer, C. S. Stuart and J. V. Strawbridge.

We are in receipt of the "Hand Book and Catalogue" of the Master Builders' Exchange of the city of Philadelphia. The volume contains over 300 pages, embodying a brief sketch of the Master Builders' Exchange, its intents and purposes; the new Building law for Philadelphia and other ordinances relative to building, such as plumbing and house drainage, etc. This book will no doubt prove of inestimable value to builders, architects and all classes interested in that line.

The authorities of Fall River, Mass., cannot be censured too severely for not enforcing the law which provides for the inspection of boilers. Had this statute been rigidly enforced, the frightful explosion, which totally wrecked Langley's harness shop in that city and caused an appalling loss of life and destruction to property, would probably never have occurred. The engineer of the factory made the statement that the boiler had not been officially inspected in five years.

Treasury Department reports put the world's gold production for 1894 at $181,500,000, which is an increase of $23,000,000 over 1893. The silver product for 1894 was $214,000,000, an increase of but $1,000,000 over 1893.

It is reported from Ellwood, Ind., that a tin can factory, employing several hundred hands, is to be located there by Eastern capitalists.

SOME BUCKEYE TOPICS.

EDITOR HARDWARE: We are now on the eve of an industrial revival. Times are getting better, and no mistake. Improvement is felt in all branches of the trade, and although competition is fierce and crowding, the leaders of the trade are evidently holding their own. If it were not for the coal and other minor strikes at the industrial centres of the State, very little complaining would be heard, for the trades people have resigned themselves to the inevitable, and know that prosperity will not come back at leaps and bounds, but at a graduated tempo.

The Cincinnati trade is reporting a good volume of business, local and outward. While movements do not come up to those of 1892, there is every cause for congratulation. The South and Southwest are buying more freely, and Ohio countryward shipments are also more liberal. It is true, in country places a conservative policy still prevails, i.e., there is a tendency to cover only visible wants; yet, on the whole, these wants make quite a bulky bill, owing to the animation of consumers.

Cincinnati plays now as ever an important role in the Hardware business. Its old houses, which have long achieved a national renown, have done wonderfully considering the inroads worked by vigorous rivals South, West and East. They have not only maintained their old relations with the neighboring States, particularly to the South, but established many new friendships. The influx of the newer patronage has impelled them to modernize their methods and premises. There is up-to-dateness wherever you may go now, and go-aheadiness seems to be the watchword all along the line. During the last decade scores of new stores have sprung up throughout the city and even in the suburbs, for the downtown capacity is necessarily limited. Despite the hard times, there have been few failures in Cincinnati. The smaller storekeepers are, of course, complaining of a steadily decreasing business, but this is a freak of the times. Everything seems to be drifting into the hands of the larger dealers, and you cannot really blame the public for it, and since the department stores have gone into the Hardware business, the little man feels the depression at a vital spot.

Ohio, outside of Cincinnati and Cleveland, the two great manufacturing centres and distributing points, is acknowledgedly a representative State in Hardware matters. It is full of vigorous little cities and towns, all of which control a good trade of their own, be it in general Hardware or specialties. Hamilton, Columbus, Springfield, Dayton, Toledo, Youngstown, Canton, Akron and a dozen of lesser places are each, individually, doing a business to speak of, and what they are doing is done on modern lines. Columbus and Toledo are holding a good country supply business the year round, and their dealers' stocks show that it is comprehensive as well as profit bringing.

Cleveland, the great iron mart of the State, should naturally be a leader in the Hardware industry, and so she is. Her wholesalers are covering the States and Canada in a thorough manner. Her manufacturers—and they are many—have little trouble to place their output. There are a great many specialties manufactured here that are in demand the world over, and she is still adding to her laurels. Cleveland has several hundred dealers, large and small, fifty per cent. of whom are substantial people. She also has her department stores, but the dealers are not afraid of them, simply because their enterprise is not appreciated by the better class of buyers.

Travelers from the East have often told me that, as a rule, the Ohio Hardwaremen are an intelligent and wideawake class of buyers, and clever people in general. They are right. When we take up the newspapers and periodicals and read their advertisements, we must but agree with them. Printer's ink has in a large measure been instrumental in the making of so many well-to-do Hardware dealers in this State. Then they are assiduous readers of their trade journals. An Ohio Hardwareman without some trade journal is as scarce as "hen's teeth." Of course, quite a few of them read publications of little worth, imparting little information and dishing up stale news, if news it be, but probably they have not learned of anything better. This may be the case, although there is actually no excuse for it. The advertising manufacturers are doing their utmost to get these people into the line of progress, and between them, the publishers and traveling salesmen, there is no crossroad. They must eventually capitulate.

Cleveland, Ohio, June, 1895. J. B. RINDFLEISCH.

The contract for the electric launches for the lakes at the Cotton States and International Exposition, Atlanta, Ga., has been let to Gen. C. H. Barney, of New York. The launches will be made of cedar, with oak frames and mahogany decks. Seven Venetian gondolas and one Venetian state barge will also be placed upon the lakes. These lakes, surrounded by terraces covered with running honeysuckle, and illumined at night by thousands of electric lights, will be one of the most beautiful features of the fair, and the electric launches and gondolas will afford a quick means of transit from one part of the grounds to another. Around the margin of the lakes, at vantage points, will be the landings.

The March-Brownback stove works at Pottstown, Pa., were destroyed by fire some days since. The flames were discovered about three o'clock, near a stairway leading from the moulding room to the second story of the building. The moulding building is a total loss, and many valuable patterns were destroyed. The large four-story wareroom, business offices, polishing, fitting and stock rooms were saved. The loss is estimated at $50,000, on which there is an insurance of $25,000.

The St. Louis (Mo.) Shovel Co. has announced to its employees that on July 1st an advance will be made of 10 per cent. in all wages. This action was unexpected by the workmen, who say they have had no cause for complaint and made no request for an increase. Great enthusiasm was shown in the factory when president Julius C. Birge made the announcement.

Cramp & Son, of Philadelphia, U. S. A., the builders of the United States mail steamers *St. Louis* and *St. Paul* are reported to be in negotiations with the same owners to construct a steamer capable of crossing the Atlantic in five days or less. Our American cousins are trying to "get on."—*Hardware Trade Journal, England.* You just watch them during the next year or two.

The Cooper Lamp Co., Westfield, N. J., incorporated. Capital stock, $75,000. The incorporators are Sherman Cooper and Enoch Richardson, of Westfield; Philip and Charles E. Hathaway, of Bergen Point. The company will engage in the manufacture and sale of a lamp patented by Mr. Cooper, and will have a branch office in New York City.

A receiver has been appointed for the Hubinger-Carroll Cash Register Co., of New Haven, Conn. The assets of the company are said to be $38,000.

Fuel and Solar Heat.

If people were asked what warms our houses in these days of improved heating appliances, most would say, "It is heat produced by the combustion of fuel," coal or wood, as the case might be, and this would be correct, says an exchange. Occasionally one would be found who would say, "It is the heat of the sun," and this would be correct also. The fuel we burn in the present age has been produced in a past age by the action of solar heat, to which all known activities available to man for increase of his powers, his comfort, or his pleasure can be traced. Without the sun's heat the masses of luxuriant vegetation that have been transformed and stored up as coal in the earth would never have existed. Without solar heat the trees whose wood is used as fuel would not have grown. Recent experiments of Professor Dewar indicate that at temperatures so low that oxygen liquefies, chemical action either ceases or is so much diminished as to justify the inference that it would cease altogether at still lower temperatures. It is certain that all life, as we know it, whether vegetable or animal, would end at a temperature higher than is necessary to liquefy oxygen. Without the heat of the sun all things on this earth would soon reach lower temperatures than science has ever been able to produce artificially, and all life as well as all other forms of activity would terminate. If the ancient sun worshippers had even an imperfect idea of the part this great orb plays in the grand activities of the universe, they are not to be wondered at for regarding it as the source of all power and benificence, and adoring it as such.

Gas Stove Men Get Together.

A recent dispatch from Toledo, Ohio, says: The gas stove manufacturers from all parts of the United States met at the Boody House for the purpose of holding a meeting to take action in regard to doing away with the ruinous competition in the sale of gas stoves. The session was held behind closed doors, but enough leaked out to show that the manufacturers of gas stoves have decided to form a combination to regulate the manufacture and sale of stoves throughout the United States. The parties present hail from every portion of the United States from Maine to California. Among the list of those who attended the meeting were: William H. Emerson, Boston; George D. Becker, Chicago; F. L. Gordon, New York; C. L. Gordon, New Orleans; D. E. Cahn, Detroit; Stanhope Boal, Piqua, Ohio; C. E. Hawke, Buffalo, and about twenty others. A committee was appointed to arrange for the formation of the combination and to report to the manufacturers at a future meeting. It is stated that the capital involved in the proposed trust will aggregate $9,000,000.

Knife for Anglers.

A Sheffield manufacturer has brought out a knife that is taking well among English fishermen. It is composed of a strong blade, scissors, corkscrew, leather borer, saw and bait disgorger, and a particularly useful combination at the end, whhich constitutes the principal feature of novelty in the knife. In case the fisherman desires to weight his line, an easy method of slitting the shot results from placing it under the sharp cutter provided for the purpose, when, as the lever is pressed into place, it makes the pellet ready for the gut, with a nick of exactly the requisite depth. Then instead of closing the shot round the gut, as so often has to be done, by biting between the teeth, it is moved to the extreme end of the knife and adjusted, and is shut by the pressure of the lever in a minimum of time. The lever serves the purpose of nippers, but is equally useful, when closed, as a hand vise for wrapping or fly making. The knife is not ungainly in size and it presents an exceedingly handsome appearance.

Michigan Hardware Association.

It has been definitely decided that the meeting of the Michigan Hardwaremen for the purpose of forming an association, will be held in Detroit, on July 9th. Such responses have come from the various parts of the State as indicate that the gathering will be large and representative. Headquarters will be at the Hotel Cadillac. A standard rate has been secured from the railroads of one and one-third for the round trip, on the condition that there are one hundred representatives at the meeting, and that each, when buying his ticket at the starting point, secures from the ticket agent a certificate for endorsement at the meeting. It seems almost incumbent upon every dealer in the State to be present, as the occasion is one of great interest to the trade in many ways. Details of information can be obtained from F. S. Carlton, Carlton Hardware Co., Calumet. Mich.

A Material Extension.

The Wire Goods Co., Union Street, A. W. Parmelee, president, has prepared for a very material extension of its business, the change, in fact, doubling its existing floor space. The new space will be taken July 1st and consists of three floors of the building, No. 16 Union Street. This four-story building was bought by the Wire Goods Co. about a year ago, The corporation also owns the old White factory which joins it on the south, and thus with its main factory on Union Street, owns an entire block or square. The fourth floor of the building, No. 16 Union Street, is now occupied by John E. Wakefield, the wrench manufacturer, and he will remain, but all three remaining floors will be used by the Wire Goods Co. for the expansion of its growing business. Already these two buildings have been connected by three steel bridges, one from each story, and each directly above the other. The bridges were built and set up by the Berlin Bridge Co., East Berlin, Conn., and are extremely neat affairs, as well as strong and serviceable.—*Worcester (Mass.) Gazette.*

Old Proverbs: Modern Applications.

"Never bite off more than you can chew." One never knows how much he can really take care of until it is bitten off.

"It's a long lane that has no turning." The straight lane is the best, after all.

"Too many cooks spoil the broth." Better too many cooks, than too little broth.

"Every dog has his day." Too many of them prefer the night for their musical exercises.

"The child is father to the man." Too often his boss, also.

"Children and fools always tell the truth." That proves they are fools and children.

"It's always darkest before the dawn." That gives the old man a chance to get into the house safely.

Department Storekeepers Indicted.

The Grand Jury has indicted eleven of the heads of the large department and dry goods stores of this city, for selling bogus silverware stamped "Sterling" or "Coin." If these dealers knew that they were handling spurious goods and wilfully deceived their patrons by using the "Sterling" mark, no punishment can be too severe for them, as the offense is as flagrant as counterfeiting. Thirty-two samples of silverware collected at haphazard were examined and tested by the United States Assayer. Of this number, only one sample reached the standard required by law, i.e., .925. Five obtained the average of .900; one showed only .0004, and some had no silver whatever in their composition.

CONFESSIONS OF AN UNSUCCESSFUL CLERK.—II.

The town of Grange contained some fifty stores, located upon the two main streets, which ran at right angles with each other. They ranged in size from the big dry goods store upon the main corner, to the little groceries and meat shops near the depot. It was a bright day in winter upon which I set out upon my quest, and as the town was full of country visitors, the scene was very attractive to the boy in cowhides and Kentucky jeans, who hoped that the beginnings of his fortune lay near at hand.

I walked the whole length of Market Street, and then down Main, unable to decide which place offered the surest promise of success. I had felt as large as my fellows at home, but had dwindled several sizes since entering Grange. Of course, no one gave me a second thought, but it then seemed as if all the spruce young people and the solid old ones who happened to look in my direction, were wondering where the new specimen of "gawk" had come from. My feet and hands had developed in size; my coat had grown rusty, and trousers too short. My heart stood still at the mere thought of marching into one of those busy and attractive places, and boldly offering to become a part thereof.

An hour spent in looking through store windows and dodging from opening doors, was valuable in the teaching of humility, but brought me no nearer to a situation. I believe I would have gone home without the trial, and perhaps devoted the rest of my days to hay and cordwood, had it not occurred to me that diplomacy might accomplish that which mere courage was unable to attempt.

The sheriff of the county was a big-bodied, big-souled fellow who had once lived in our town and knew me well. Any service he could render, I knew would be gladly given, and the thought was hardly formed before I was looking for his office, in the lower corridor of the court house.

The sheriff was in. His greeting was cordial, his interest warm, and promise of assistance readily given. "I don't know just where to look," he said, "but I'll go over and see what can be done. You come back in an hour, and I'll report progress."

At the expiration of the specified time, the now hopeful youth was on hand, and listened to the report. "There is a dry goods store across street, Samson & Crown, who think they will need a clerk in about a month. One of their boys intends to leave. You go over and ask for Mr. Samson, and tell him I sent you. If he likes your looks, you stand first chance, on his promise to me. Don't be too pert with him, and don't stand with your finger in your mouth. Now run along, and good luck go with you."

Mr. Samson, who was a middle-aged bachelor, was found back by the stove reading his newspaper. He talked with me for a long time, asking a great many questions, and giving me some good advice, and at last said: "You go home, Henry, and I will see what we can do for you. One of our young men is talking of leaving, for the study of law, and we may call upon you. Give me your address, and if we need you, we will let you know by mail."

It was an anxious month that followed. The mail came once each day by wagon, and the bag was hardly in the office before I was before box 65, to see if "Rodney" would drop a letter for me. Many came to my father on business matters, but none for me; and I began to believe that the fortunes of Samson & Crown would complete themselves without me.

One rainy day a yellow envelope was handed out. My heart beat rapidly, as I saw that it was for me, with a Grange postmark. I sat down upon the bench on the post-office porch, and read, as near as I can now recollect, words like these:

Dear Henry: We have a vacancy now, and have concluded to give you a trial. Mr. Laird says you are honest and capable, and your chances with us will depend upon yourself. We will pay you $100 for the first year, with your lodging, board and washing. Please let us know if you still desire to come, and if so, be on hand about the 15th of February. Yours respectfully,

SAMSON & CROWN.

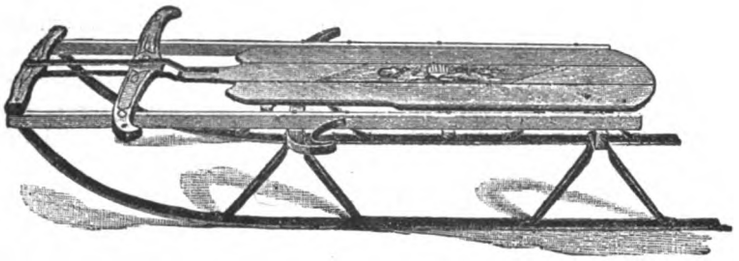
Many letters have fallen into my hands between that day and this—some freighted with pleasant things and more with tidings of loss or sorrow—but no one of them has so stirred and excited me as did this. It was read three times at that sitting; twice on the way home, and over and over to the folks at home. Then it went the rounds among my schoolmates, and my little brothers began to look up to me as one set aside for important things. Upon the whole, I did not feel very small myself. I will never forget the hearty good will with which Mark Rowland received the news of my fortune, and the generous wishes with which he speeded me upon my way.

(A word of digression here. These details, taken actually from the life of a country boy who has passed on into a commonplace man, are not penned for those who have found some royal road to wealth and honor. I have felt that they might touch a sympathetic chord in the hearts of some men who have traveled a like road; recall to more than one the boyish hopes, the aspirations, the privations of early life. And there is another class whom I would reach —the young clerks who read HARDWARE, and who may find in the failures of one of their kind, a warning against such courses as will lead to like failures upon their part.)

My father preserved a non-committal silence through all this excitement. He did not give his consent, nor did he refuse it. My mother grieved not a little to think that a second of her sons was to leave the home-nest over which she brooded with such loving care, but from the first I knew that her judgment and sympathies were with me. The younger boys, Frank and Charlie, received with scorn unutterable any suggestion of refusal; and so, in the evening of this fated day, I sat me down by the kitchen table, and wrote my reply.

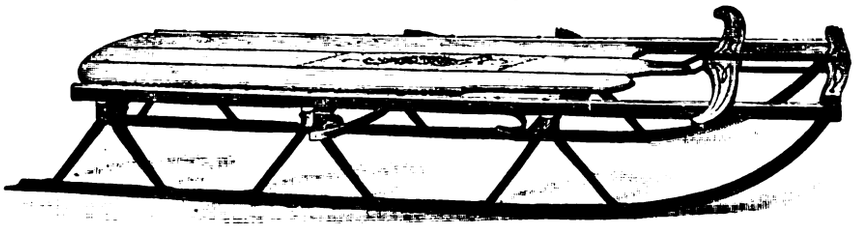
Two weeks were yet to elapse before the time set for departure, but on the following morning I drew from its corner in the attic the family trunk, and began to pack. The boys were on hand, with ready willingness to lend a hand. We carefully dusted it, inside and out, lined it with a loose newspaper, and then looked about for the goods with which it was to be filled.

The labor of packing was not as great as these preparations would seem to imply. I possessed two shirts, but as I was wearing one, and the other was in the wash, neither was available for our purposes just then. The trousers I had on were too old and worn for the larger demands of Grange, and so took no part in our inventory. (They were afterwards cut down for Charlie.) I had a special pair of cassimere, for Sunday wear, and these were carefully folded and laid upon the bottom of the trunk, unmindful of the fact that they must come forth for the next Sabbath wear. With these went a pair of blue army cloth (cut down to my size) that my cousin had given me when he returned from the war; in my innocence I felt that as long as the cloth was good, nothing could be said against the brightness of their blue. A half dozen books, a bundle of trinkets, and a photograph album, made up the sum total of my goods, as my boots, hat and coat were needed for immediate use.



Digitized by Google

There was a great deal of expansive emptiness about that trunk when we shut down the lid.



Two weeks will slip away, even when an impatient youngster is watching their slow departure. There came, at last, a crisp morning in February, when the old gray mare and buggy were brought around to the door, the trunk strapped on, farewells said, and the journey of life commenced. A near-by chum, George Strohm, had volunteered to go along and bring the traveling outfit home. A drive of three hours saw us at the door of Samson & Crown, and when my trunk was slipped under a back counter, and I had seen George through his dinner and started for home, I felt myself indeed a citizen of the world, and turned to the mysteries of store-keeping with a zealous enthusiasm.

S. L. Allen & Co. Getting Ready.

S. L. Allen & Co., No. 1107 Market Street, Philadelphia, are very busy filling orders for their famous "Planet Jr." line, and have about all they can handle. Although it is

still early in the season, they are already beginning to think of their sleds for next winter—their "Flexible Flyers," "Flyer" Sleighs, and "Flyer" Coasters. The demand for these goods for immediate shipment is not very heavy; they are already beginning to receive enquiries for prices and information from jobbing houses, and their travelers will soon start out for an active canvass. These goods gave such excellent satisfaction last year that they will make

comparatively few changes, except that they will very considerably improve the finish. Prices and discounts will remain the same as last year. We show a couple of their "Flexible Flyers" in this connection.

Prince Wells' Cycle Derby.

On July 4th Prince Wells will hold his Fourth Annual Cycle Derby at Fountain Ferry Track, Louisville, Ky., and a ten-mile handicap road race over the Southern Parkway. One of the features of the meet will be a Gold Brick Race, the prize to be given consisting of three gold bricks valued at $150, $75 and $25. Competition record must be beaten, or it will be declared no race. Entries to handicap close on June 26th. Entries to other events close on July 1st. The prizes offered in all the events are varied and valuable—bicycles, watches, silver cups, diamond cuff buttons diamond rings, bicycle suits, etc., etc., being found among their number.

Something About Honolulu.

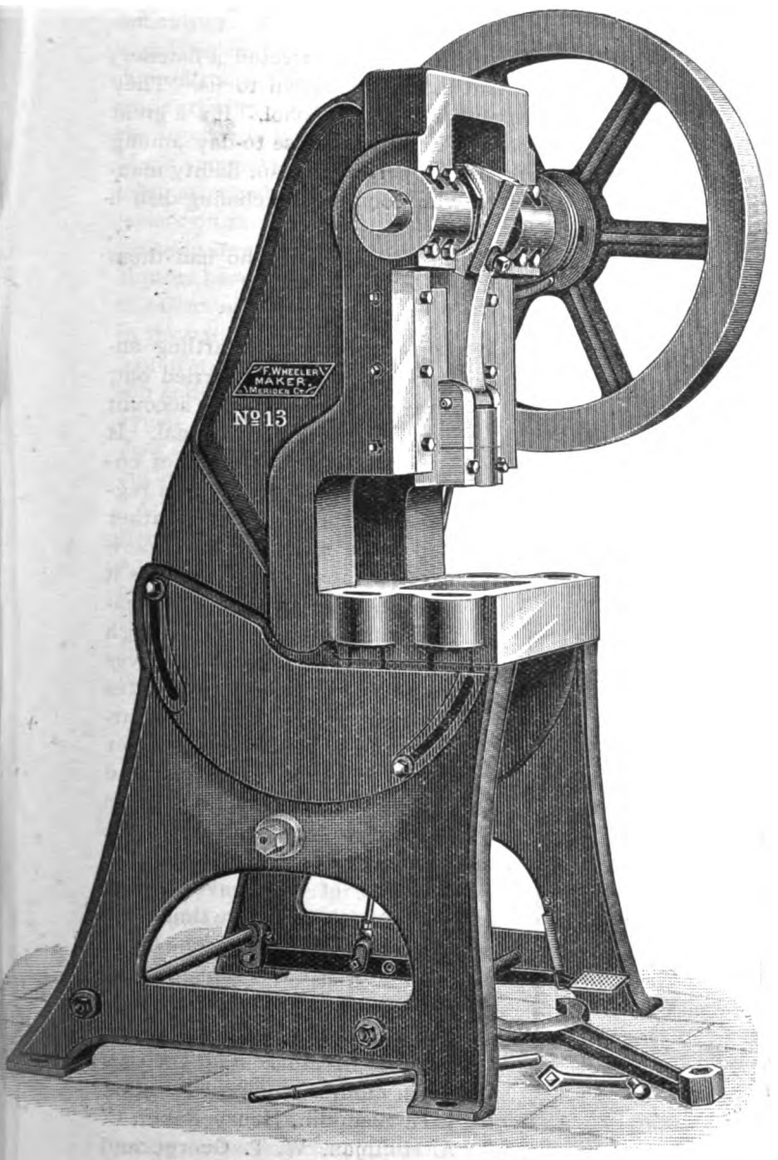
Oliver Bros. give us some very interesting extracts from a letter of a business friend in Honolulu, Sandwich Islands. The correspondent says: "I reached here recently, and am delighted with the place. The climate is lovely and the society charming. It well merits the name of the Garden of Eden of the Pacific. I went to church one Sunday, and never saw such a mixed congregation. There were Chinese, Japanese, Portuguese, Kanakas, Germans, Italians, and, in fact, all the nations on the globe were represented. Most of the natives are Catholics." The Sandwich Islands would, no doubt, prove an ideal country for a good many of us to reside in, especially those of us who were born tired, as they seem to have one round of holidays there. The correspondent continuing, says: "Four steamers touch at Honolulu a month, and for the five days following it is impossible to do business. From two to three steamers ply between the islands a week, and on those days as well as Saturdays when the business houses close at twelve, it is impossible to see a business man. There are about three working days in each week. Nearly all the Honolulu houses are represented in New York, Boston, San Francisco or Liverpool."

Roads in Europe.

To an American visiting Europe there is nothing more impressive than the general excellence of the roads. Their climate is more rainy than ours, and their roads, under the same conditions, would probably be even worse than those usually met with in America. But in England, in France, in Germany, and in Switzerland, everywhere one goes, the excellence of the roads is a constant source of surprise to one visiting those countries. During the last summer it was my fortune to take a long drive in the Alps. The party was made up of six persons. A coach was employed for the whole trip. We were thirty-three days in the coach, and during that time we went over four of the great passes and traveled nearly a thousand miles. But the matter of chief significance to those interested in good roads is the fact that, although we drove from twenty-five to fifty miles a day for more than a month in these mountainous regions, the whole trip was done with one team of horses. No change was made, and none was needed. More than that, it was our opinion that the horses were in better condition at the end of August than they had been at the beginning of the trip, a little after the middle of July. Could there be any more significant commentary on the quality of the roads? What would be the condition of a team of horses in midsummer in America, which had been driven over mountain roads at the rate of twenty-five to fifty miles a day for six days in a week?—*C. K. Adams, Ex-President of Cornell University.*

A Victory for C. E. Jennings & Co.

In the United States Circuit Court of Appeals, the case of Henry G. Thompson and others, against C. E. Jennings and others, for infringement of patent, has been decided in favor of the defendants, the decree of Judge Lacombe of the District Court being affirmed with costs. In this case it was sought to restrain C. E. Jennings & Co. from selling the well-known Griffin Hack Saws. G. W. Griffin & Co., who were the real defendants in the case, originated the high-tempered Hack Saw blades now in general use throughout the country.



Foote, Brown & Co., Penacook, N. H. HARDWARE Publishing Co.: Enclosed find check to pay our subscription to HARDWARE for one year. It is a pleasure to receive your paper, and we always find something that is a help to us in its columns. Your market review is good, and would like a little more of it.

The Berlin Iron Bridge Co., East Berlin, Conn., have just completed a new boiler house roof for the Stanley Works, at New Britain, Conn.

The New Wheeler Press.

The new Wheeler Press, with Wheeler's patent solid pitman, here shown, is manufactured by Frank Wheeler & Son, Meriden, Conn. It has a double clutch mechanism, automatic brake, and positive stopup action. The clutch, as well as the adjustment, is an entirely new style. The makers say that in offering this new Press, they feel confident they are offering "a machine in every point without a superior, and in many respects without an equal. Its conception and construction was the result of concentrated thought and numberless experiments, extending through a term of years, by a thoroughly practical mechanic, who being thrown into everyday contact with machines of this character, became thoroughly acquainted with the defects

existing in them and was therefore eminently fitted to produce a machine which for points of excellency and durability we do not hesitate to say stands obviously pre-eminent among its contemporaries." In detailed description of the Press they say: The incline adjustment is a new and valuable feature. Among the various devices now in use for adjusting the punch in a pitman press or a press in which motion or force is communicated to the punch from a crank through the intervention of a pitman and gate or slide, are notably the screw and nut or eccentric at the top or bottom of the pitman, and the ratchet or V thread screw clamped between strapped ends at the top and bottom of the screw; any and all of which have served well in the art of press building, impressing the builder with the wants and requirements of a perfect machine. The screw or nut arrangement answers very well for light work; but for heavy pressure, the strain coming all on the threads of the screw, it will not stand for any length of time. Another device is to place an eccentric ring around the crank pin, which is clamped by a screw in the top of the pitman. This, also, when subjected to heavy strain is liable to, and often does, give great annoyance by slipping. Numberless other arrangements have been brought forward, only to develop some new fault equally as serious. By placing a sliding box on the top of the pitman, Mr. Wheeler wholly overcomes all of the objections existing in prior devices. The solid pitman is so arranged that all the strain and pressure comes upon solid metal; the lower end of the pitman being seated in the solid metal of the slide or gate, and not resting upon a screw or pin. The great adjustment of which this arrangement admits without weakening any of the parts of the Press is a feature to be considered. It is also very handy for adjusting the punch to the die, as by simply turning a screw after loosening the clamping nut, the box is easily moved up or down the incline to the desired position, making one of the finest and most delicate adjustments in use. The pressure at the time when the Press is doing its heaviest work is brought squarely upon the end of the pitman, thereby relieving the adjusting screw and clamping nut from all strain, and entirely obviating the tendency to slip or strip the thread of the screw. The double clutch is another very desirable feature of this new machine, since by its use the cramping, wringing and twisting tendencies common in clutches where the contact is made at only one point is entirely obviated. By using the double clutch two points of contact are made simultaneously, on directly opposite sides of and in and near the centre of Press shaft. This is an entirely new style of clutch mechanism. The automatic brake is another and desirable feature embodied in this machine. By its use the Press is stopped—not suddenly with a jolt and jar, as in other machines of this class—but gradually and so easily that not the least unevenness is perceptible in the running of the machine. The brake is perfectly automatic in its operation and needs no attention from the operator. The brake is so constructed as to take up all wear automatic self-oiling device, and needs little or no attention. Still another point of advantage is that there is no drag on the shaft when the Press is running. No occasion to screw up the gibs so tight upon gate or slide as to cause them to grind. The positive stopup is also a new and valuable feature, as by its use it is impossible for the Press to rotate a second time accidentally. It is simple, durable and effective, automatic in its operation, and requires no attention on the part of the operator. The slide or gate is provided with extra long bearing surfaces and is adjustable for wear. The workmanship and material are both first-class in every respect, and we do not hesitate to say that this Press is one of the most perfect machines of its kind ever produced.

We are in receipt of a sample Stove Polishing Mitten from the Michigan Stove Co., who manufacture the Garland stoves and ranges. The company have arrangements with the manufacturers of these gloves, that will enable them to supply their customers with quantities at the small outlay of four cents each. The company state that they cannot accept an order for less than 100 with card printed on. As far as we can judge, not having had a large amount of experience in polishing stoves, these mittens should prove very useful, and by using one the hands can be kept clean.

Electricity is now used to seal cans of fruit and preserved meats. A conductive layer is formed on the lid of the can and a metal coating deposited by the ordinary methods of electro-plating. The process is also being applied to the sealing of bottles of wine, beer or chemicals.

Hardwaremen, and Screens to Order.

A. J. Phillips & Co., Fenton, Mich., report that their department for "making screens to order" has been liberally patronized this year by many progressive Hardwaremen. They are at present full of orders for fine screens made for good residences, which have come through the Hardware trade. They further say: "While it entails some little trouble in measuring residences and putting up work, there is nothing in the screen line that is so satisfactory and pleasing to the customer when the job is once in place, as these fine screens, and as they yield good profits, the dealer is well repaid for his trouble. Thus far we find that every progressive dealer who has taken hold of this sort of work continues to send us orders. We think that the handling of fine screens by the Hardware trade is now in its infancy, and that in a year or so that trade will be as much interested in it as dealers now are in handling bicycles. We are pleased to say that our general business is also very good and that we never had anything start so easily or sell in such large quantities the first year as our new Flyer screen which we introduced the past season. The jobbers, retailers and consumers seem to be taken with it at sight, and select it from among other patterns."

Some New Ice Tools.

The James W. Eustis Co., No. 19 Pearl Street, Boston, are making some fine new things in Ice Tools for house use. The accompanying cuts explain the goods to some extent.

The ice hatchet is three tools in one—an ice chisel, ice pick and hatchet combined. The picks are oil tempered and finely nickeled. The sliding ice pick is especially good. They would be glad to send sample dozens, or in larger quantities.

Mission of the Chafing Dish.

"The mission of the chafing dish seems to be in the direction of light housekeeping," said a man who deals in the new fad, "so many people buy them to cook lunches and suppers in their rooms. Five years ago we had a single order for a chafing dish, and there wasn't a man jack of us knew what the thing was. Now we have them as high as $35 each, and not silver at that."

"What is their special use?"

"To cook Welsh rarebits at midnight, so far as I have observed, although some people make the same use of them they would of a small cook-stove. It is an old fad revived. I wouldn't be surprised to see warming pans coming in next."

"We couldn't keep house without a chafing dish," remarked a young man, taking a small package from his pocket. "This is a little volume of recipes that I bought to-day for my wife. Last night when I went home the table was laid, and the chafing dish stood in front of my wife on the tray, and a delicious steak came off. She put on a pudding which cooked while we were eating the steak. It's the greatest invention of the age."

"It isn't an invention of the age," interjected a listener; "it's an old roysterer that has come down to us. They used to burn oil in it, and we burn alcohol. It's a great convenience, and there are hundreds in use to-day among people who like to cook late suppers in a clean, dainty manner. I know of travelers who consider the chafing dish a part of their outfit."

"All the same, it's a fad," said the man who had them for sale.—*Detroit Free Press.*

"Engraving by dynamite" is a somewhat startling announcement. And yet this process is actually carried out, if we may rely on the account given in a technical journal. It appears that this method of engraving is not adopted as a regular trade process, but is rather used in the nature of an experiment by those whose business it is to test the strength of dynamite, gun cotton, and other high explosives. Fresh plucked leaves are placed between two plates of highly polished steel, and cartridges are exploded on the upper plate. The recoil is so great and sudden that the upper plate is driven downward with such force and rapidity as to catch exact impressions of the leaves before their delicate ribs have time to be crushed by the force of the blow.

The Trenton (Mo.) Handle Mfg. Co., which has been operating as a private firm for the past seven months, composed of Col. J. H. Shanklin, Henry Baker, C. A. Hoffman, W. T. George and N. Shanklin, will resolve itself into an incorporated body. The corporation will be capitalized at $10,000, and the stockholders will be J. H. and N. Shanklin, W. T. George and Henry Baker. The company have lately made a valuable addition to their buildings by the erection of a large and commodious packing room.

"Jim, wot is steam, anyhow?" "It's a sort o' waporous sweat wot the millions of hanimalcula wot's in the water throws off in their hanguish at bein' scalded to death!" "What a gilly I am! I might ha' knowed as much."—*Exchange.*

HARDWARE is printed for men now on earth.

PRACTICAL TALKS TO HARDWAREMEN.

PICTORIAL WINDOW DISPLAYS.

The difficulties in the way of combining articles of Hardware in figures intended for Window Display, are hardly appreciated by any but those who have "been there." It seems easy enough to say "use such and such an article for this or that," but to get the best article for each part, perhaps a dozen or more suggestions will be tried before securing the right thing.

In arranging a display of "pictorial representation" to be made of builders' Hardware, we discovered a few such difficulties. It was intended to have a large panel, nearly eight feet high by four feet wide, as a background for the main display, this panel to be covered with designs in Hardware articles. It was plain sailing, making a telephone, for the top of the board, of a door bell. A file handle painted black connected to a chalk line made the transmitter; a knob attached to a piece of bent wire made the crank; gilt letters on the box read "Ring up 91." It was also easy to make in large letters below the 'phone, out of chain bolts, shutter bars, sash hooks, etc., "For 1895 Hardware," while to fasten on each side of the board fancy hinges, and butts in the various finishes, was purely mechanical. The trouble began with the centre piece; this was separated from the top and sides by bronze sash chain, and represented a bicycle. The spokes were wire 20d. nails, tires of coiled door springs, sprocket wheel, a brass screw pulley, with screw cut off, connected to the other wheel with brass jack chain.

One of the articles suggested for the handle bar was a wire ceiling hook. We even got so far along as to put on it a coating of aluminum bronze, before discovering the difficulties between a "full face" and a "profile" view. Then the seat! The board stood nearly a day before we could think of what to use. Then the thumb piece of a thumb latch was cut off close to the pin hole, and we had a first-class saddle.

It is not to be wondered at that a display requiring much work, should stand for some time. We used our panel in various combinations and positions for nearly two months.

"OUR LADY CUSTOMERS."

In order to be prepared to supply the wants of a community, that is, to get all the business you can, it is important to know the class of customers that come to your store, and also the proportion of men, women and children.

If the men are the principal customers and every inducement and attraction made for them, the wants of others are often ignored, and, because the proportion of ladies is smaller than that of the men, their trade is apt to be undervalued.

Our eyes were opened to the importance of this question while discussing the advisability of having a working display of certain cooking utensils. We objected to the traveler's proposition on the ground that not enough ladies came to the store to warrant the undertaking. It was finally decided to record the number of people who entered the store in a given period of time, and classify them. A boy was stationed in a convenient place to keep the record.

The afternoon of a certain Friday in May was selected. Between 2.30 and 3.30 the record showed a total of 40 people, composed of 26 men, 5 ladies, 9 boys.

In the evening of the same day, between 7 and 8, the total was 67—28 men, 14 women, 17 boys, 8 girls. While on Saturday morning from 9.30 to 10.30 the total ran up to 82—53 men, 14 women, 10 boys and 5 girls.

In the study of these figures, one's curiosity was excited as to the kind and quantity of goods in demand by the ladies.

An investigation revealed a surprising number among the ladies of what may be termed "business women"—women who, having property in their own name, attend in person to all the details connected therewith, from questions of taste, as selecting shades of paint, to questions of utility, as in choosing trimmings in Hardware for a house; proving in the conduct of their business affairs very desirable customers; generally knowing what they want, although, of course, not familiar with the technical names.

"I would rather," remarked a salesman, "sell Trimming Hardware to a woman who does not know the difference, by name, between a butt and a strap hinge, and who does know what she wants when she sees it, than deal with a man who, knowing a *little* about names and terms, thinks he knows it all."

SHOP MAN.

Where They Learn to Ride.

Now that the New York Four Hundred have so unhesitatingly endorsed the wheel, a few lines regarding a leading cycle school should not be amiss. In the beginning of the season Spalding's Cycle Academy was located in the Roof Garden at Madison Square, but now the summer season being here, the Roof Garden is wanted for a different kind of attraction. This necessitated a removal to the amphitheatre, which is much better fitted for the purpose. Those who wish to be up-to-date and do the proper thing, are rushing to be instructed, and daily large crowds may be seen endeavoring to maintain their equilibrium astride the silent steed. The patrons of the Garden school keep thirty-six instructors very busy. Old and young, great and small, all seem to have gone daft on the subject of wheeling. At the school a check system is in operation. One who wishes to receive instruction procures a check, and waits till his number is called, and is then entitled to a half hour's instruction. Some pupils frequently have to wait until night before their turn comes around. It may not be flattering to the vanity of the lords of creation to know that the ladies always learn more readily than the men. Some of the stout people say that they ride to reduce their weight, while their thinner companions take this form of exercise to develop themselves more fully. It is a poor rule that won't work both ways. Very few of the ladies affect fancy costumes, most of them preferring a suitable serge skirt. One can learn to ride in five lessons if instructions are followed closely. The secret lies in confidence; the person possessing the most of the quality will ride first. Many think they know it all, until they get on the wheel; this class prove the hardest to instruct, and others think they will never learn. Pupils may be seen spinning around the Academy floor, apparently knowing how to ride with the best, but as soon as they essay to ride on the street, the confidence deserts them and they get rattled.

The Norwalk Tramway Co., Norwalk, Conn., have placed an order with the Berlin Iron Bridge Co., of East Berlin, Conn., for a car barn 45 feet in width and 160 feet in length, constructed entirely of iron.

The contract for the steel bridges for the Central Railway & Electric Co., New Britain, Conn., for their various extensions, has been placed with the Berlin Iron Bridge Co., East Berlin, Conn.

The large nail mill belonging to Ellis & Lessig, Pottstown, Pa., has been working overtime. The prospects for a busy season this summer are good.

Corner Desk and Credit Man.

The Man at the Corner Desk of W. Bingham Co., Cleveland, discourses this month in these words:

I told the W. Bingham Co.'s credit man the other day that I wanted to say a word to the trade for him. He looked up from his work a moment, said: "Well, tell them I'm busy," and resumed his inspection of a pile of statements.

The credit man of every large house is a hard worker, and he gets about as much appreciation from the general public as the stage villain. He comes out strongest and makes himself most prominent when things go wrong, and by his efforts to protect his house it is not unseldom he is blamed for creating a condition of things he most deplores. The letters he writes are mainly about overdue accounts, and unpleasant features attending collections, and all things considered, it is perhaps not strange if he is made the target of considerable ill regard. At the same time, the honest merchant who will keep his agreements has no better friend than this same credit man. He has but little chance to show his kindliness, for beyond the formal acknowledgment of remittances he has but little communication with such customers, but it is with peculiar satisfaction that he stamps the orders as all right and notes the remittances and friendly letters. He can and does very often do such customers a good turn, for the credit man of one house is constantly in receipt of inquiries from other establishments concerning the standing of firms about the country seeking to open accounts, and his good or bad report is accepted at its face—but the customers never hear of it and do not know the extent to which they are indebted to their city friend, the credit man.

He makes mistakes, of course, though not often, and it is impossible not to fall into error sometimes where there is such a field to be covered, where everything is so largely a matter of personal judgment, and where the major portion of the questions arising demand instant decision; indeed, it is a matter of congratulation that the mistakes are so few. Conflicting and indefinite reports must be reconciled, and he must often gather by a process of induction—by reading between the lines of a letter, or from trifling occurrences which to others would have no meaning—facts which an untrained man would miss. He must know of local financial disturbances and crop failures—just the section affected and to what extent; he is anxious to ascertain the moral risk—the character of the men whose accounts he handles—for this is becoming more and more an important factor in business; he is obliged to know the collection laws of various States, and if a woman owns an interest in a business her exact position in the firm is in some States a matter of close consideration; he has a general idea of the condition of all the running accounts on the books of his house, and this alone requires no small amount of application if his house is of the size of the W. Bingham Co., with its thousands of active accounts. There are easier berths in the world.

Artists' Loan Exhibit.

The Artists' Loan Exhibit at the Hardware Club Rooms is a fine and varied one, many of our best artists having numbers among the collection. It well pays one to take a trip in the Express elevator to the fourteenth floor, where he can feast his eyes, and also the inner man, the Hardware Club offering unexcelled facilities. The following is a list of the pictures to be seen:

No. 1—"Vase of Double Cherry Blossoms;" No. 2—"Basket of Purple Lilacs" (oil); No. 3—"Basket of Daisies;" No. 4—"Rose of Sharon and White Clematis" (oil); No. 5—"Jack Rose and Lime Tree Blossoms;" No. 6—"Climbing Roses;" No. 7—"Basket of Sweet Peas;" No. 8—"Purple and Wild Clematis;" No. 9—"Vase of Nasturtiums;" No. 10—"A Bunch-of Hydrangea;" No. 11—"Orchids with Humming Birds;" No. 12—"Box of Pansies;" No. 13—"Basket of Chrysanthemums Overturned;" No. 14—"Double Cherry Blossoms" (oil); No. 15—"Peonies with Bumble Bees;" No. 16—"White Daisies with Larkspur," by Paul de Longpre.

No. 17—"Bacchus;" No. 18—"Old Man," by Miss Shippy, daughter of Henry L. Shippy.

No. 19—"The Last of Summer;" No. 20—"Drinking Scene;" No. 21—"The Foragers;" No. 22—"On the Farrington River" (Alderney), by E. A. Moore.

P. Dessar.

No. 46—"Niagara Falls," by D. C. Fabronius.

These pictures are subject to sale. Information as to prices may be obtained in the office.

High Grade Cotton Buffing Wheels.

Divine Bros., Chadwicks, N. Y., have certainly won great success in their manufacture of high grade Cotton Buffing Wheels. They are preparing for the erection of a new plant, which they refer to as "being the only one of its kind in existence devoted *exclusively* to the production of a full line of high grade Buffing Wheels." They add: "That we are producing the best Buffing Wheels on the market, is undeniable, and we are educating the trade up to the fact that we are occupying a field that has as yet never been occupied by any one in all the years that such goods have been in use."

They are sending their friends an attractive book, 11x7 inches in size, with heavy covers and gold lettering. It can hardly be called a catalogue, but more than that, as the book is made up of sample sheets of the goods they use, attached to each of which there is a page giving sizes, prices, etc. Their motto is: "The quality controls the price."

The Bicycler to His Wheel.

Come, rouse thee, rouse thee, horse of steel,
Be swift, thou gallant steed;
Who strides thy slender flanks must feel
The wild delight of speed,
The swirling ether streaming past,
The tingle of Night's kiss,
The biting tonic of the blast
And motion, motion's bliss!

'Tis dawn; across the bare, brown hills
The cold, bright sunlight beams,
In white and yellow paints the rills
And fills the wood with gleams.
On—while the sun his magic wields,
Up hill, and down the steep
To the long valley, where the fields
In level reaches sweep!

On city streets, in country lanes,
He loves his trusty friend
That neither falters nor complains,
Tho' journeys never end.
On, wheelman, on! Thy triumphs are
As yet just begun;
Wheel on, wheel ever—and thy star
May yet shine like a sun!

—*New York Recorder.*

NEW GOODS IN THE MARKET.

If you have anything NEW, let the world know it by illustrating it in these columns.

NO CHARGE WHATEVER is made, direct or indirect, as our interest lies in showing the readers of "HARDWARE" where the LIVE manufacturers and wholesalers are, and what they are doing.

When your NOVELTY or SPECIALTY is ready, send us an Electrotype and descriptive matter, which will appear immediately.

The Hardwaremen everywhere read this department; it is to your interest to make prompt use of it.

"Syracuse" Twist Drills for Metal.

The Syracuse Twist Drill Co., Syracuse, N. Y., are successfully placing upon the market the "Syracuse" Hot

Forged Twist Drill for Metal, which is forged hot in one piece from tool steel of the first quality. The makers speak in the strongest terms of its strength, toughness and wearing quality, showing that it is accurate in size, and of the highest finish. They tersely say: "Send a trial order, and you will want more." They will be pleased to furnish prices and all needed information upon application.

Bundy Giant Pipe Hanger.

The Giant Pipe Hanger herewith shown is suitable for all the purposes of pipe hanging usually found in steam plants. It is made adjustable to any length required. It is simple in construction and easily attached to floor sills or wooden beams by the simple lag screw arrangement shown in Figs. 1 and 2, the first of which shows the hanger closed, the other showing it open, with the different parts separate. The wood screw is easily attached to floor sills or beams and the nut on the lower end, to which the hanger is attached, is capable of giving closest adjustment. For attachment to iron sills a clamp is used, as shown in the cut, Fig. 3. These hangers are made stronger and heavier than any other device for similar purposes without the use of surplus material, and they are so simple in construction that they are easy to handle and there are no parts to give out. They are adjustable to any length, the screws being easily ex-

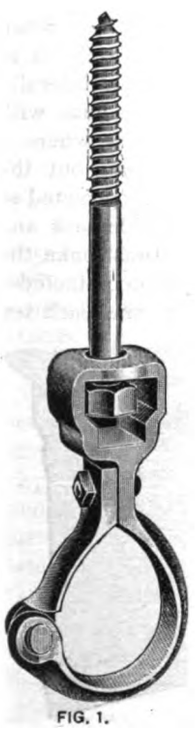

FIG. 1.

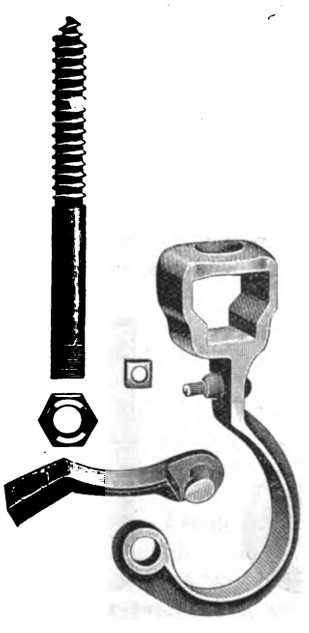

FIG. 2.

tended by the use of pieces of pipe, for the lag screws are fitted at the lower end with pipe thread. The stirrup is made to open and admit the pipe. This part is locked while at its highest or lowest point of elevation, but at an intermediate point can be opened to move the pipe. When the stirrup is closed the nut locks it at the top and at the same time draws the movable part against an incline around the screw bolt, making it rigid and tight, preventing any

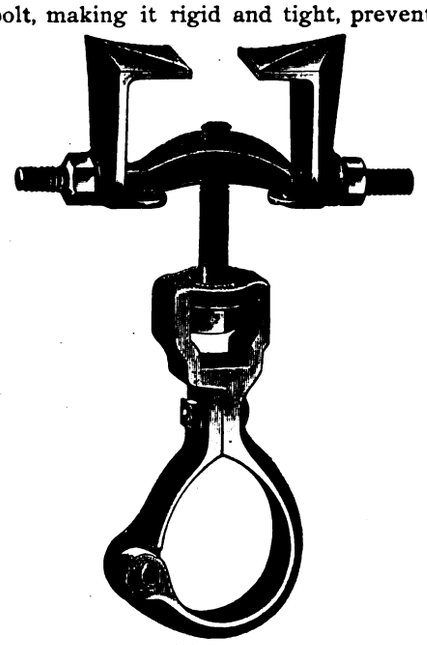

FIG. 3.

rattling noise from the vibration of the building or steam pipe, and causes both sides of the stirrup to sustain equally the weight upon them. The iron beam clamp is adjustable by means of the horizontal pipe to fit any size of beam. When attached to an iron beam the strain comes in a vertical line and is distributed equally in all parts. There being no small bolts used in this, the grappling parts avoids any weakness of construction or liability to break. Altogether this hanger includes all that is desirable in such a device and will fully serve every purpose for which it is intended. It is manufactured by the A. A. Griffin Iron Co., Jersey City, N. J.

The Columbia Kitchen Spoon.

The Columbia Kitchen Spoon, a new and handy article for the kitchen, in the Hardware line, is just now being put

FIG. 1.

on the market by M. L. Schoch, manufacturer of patented novelties, No. 47 North Tenth Street, Philadelphia, which he calls the Columbia Kitchen Spoon. Every housekeeper has experienced the difficulty in dipping thick and heavy substances that stick to the bowl and require an extra spoon or knife to clean it. To overcome this inconvenience, is the object of this Spoon, as shown by the accompanying illustrations. The Spoon is provided with a scraper which lies flat against the back of the bowl when not in use, as in Fig. 1. After dipping, the scraper is pushed forward, as in Fig. 2, by means of the little cross handle (which may

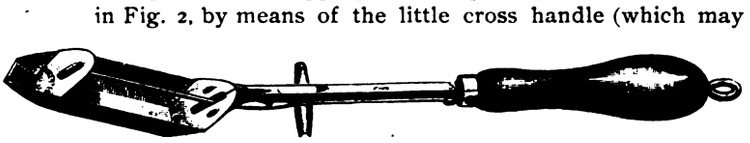

FIG 2.

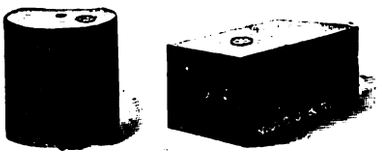


be used either right or left handed), and the contents discharged. As said before, the Spoon is more particularly intended for anything thick and heavy that is liable to stick

Digitized by Google

to the bowl, as ice cream, puddings, batter, etc., but can also be used for any of the ordinary purposes of a basting spoon. As an ice cream Spoon alone, it is a cheap and convenient article for family use, as the shape of the bowl makes it particularly handy in cleaning the sides and bottom of the freezer. The Spoon is made in two styles, tinned and nickel-plated, and sells for twenty and thirty-five cents, with liberal discounts to the trade.

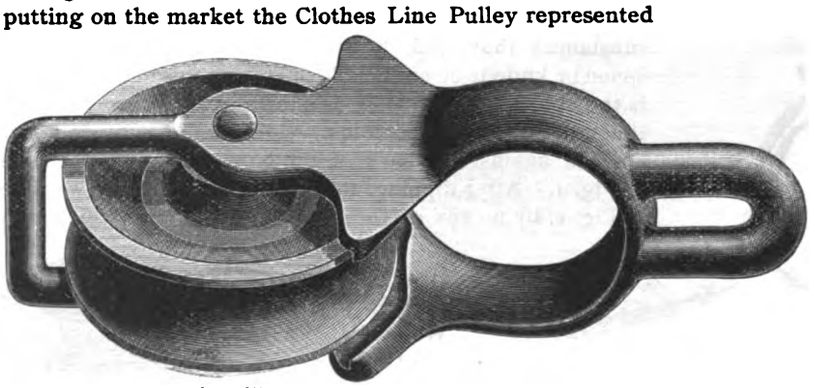
Some First-class Springs.

Perhaps no class of springs is submitted to such severe usage as those used in stone challenging machines. The

New Jersey Car Spring & Rubber Co., Jersey City, N. J., make for this purpose a special grade, using only the very highest class of material, and the utmost care in construction. They say: "With a perfect knowledge of the very severe work to which these springs are subjected, we have no hesitation in guaranteeing them. As manufacturers of springs, we are the oldest in the trade, having begun this work in 1858, and naturally have a very large assortment of

moulds—the most complete in this country, we think. Parties who desire odd-shaped moulded goods, will find it to their interest to communicate with us, as we can frequently save them expense by using moulds from our stock." Illustrations of both classes of goods are here shown.

Expansion Hitching Ring Bolt.



Among the numerous novelties having expansion as a part of their construction, the Steward & Romaine Mfg. Co., Philadelphia, have added that of an Expansion Hitching Ring Bolt. The architect and builder, in his construc-

tional work, as well as the horseman and stableman will, in the use of same, find many merits of this fastening over the expensive mode as adopted at present in hitching horses. Its economy and easy application, being easily removed, and attached elsewhere if required, are great points in its favor. Its entire security as a fastening, its strength of resistance to draught, are only a few of its merits. Prices and catalogue furnished on application.

Clothes Line Pulley.

Sargent & Co., New Haven, Conn., and New York, are putting on the market the Clothes Line Pulley represented

in the accompanying illustration. This pulley has a large opening above the wheel to allow a knotted rope to pass through freely. It has also a guard to prevent the rope getting between the wheel and the case. Should the rivet wear out or loosen and thus allow the wheel to drop, the wash cannot fall to the ground, as the loop below the wheel prevents the rope from getting away. The pulley is made 2-inch, japanned and galvanized.

Joiners Rapid Clamp.

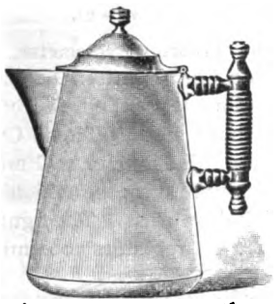
The illustration herewith represents a Clamp made by the Sam'l C. Tatum Co., Cincinnati, Ohio. It is entirely of iron and steel, and of quite modern type. The bar is smooth, without notches on either top or bottom, so that the tail stock or sliding part can instantly be set against the

work. The tail stock is released by simple pressure on the trip lever shown, so that the quickest possible action is secured. The bar is made to pass through the head piece, retaining its full strength, and lessening the possibility of breaking. One peculiar advantage of the Tatum Clamp is that the bars are made interchangeable. The head piece is secured by a bolt, which can easily be removed, and longer bars, if desired, set in, so that a workman having both long and short work can be well equipped by buying the shorter Clamp complete, and with it, a set of bars of the longest make. The Clamps are made in ten sizes, running from 15 inches to 8 feet. The 15 to 24 inch sizes have 3-16 inch by 1⅛ inch steel bars, crank handle, and ½ inch screw, and are designed to be carried in any tool chest. This pattern is made in four sizes to open 15, 18, 20 or 24 inches. A much heavier and more powerful Clamp is made for large work, using ¼ by 1½ inch steel for the bar, with ⅝ screw and crank handle. This pattern is made in three sizes, opening 3, 4 and 5 feet. For car works, and other requirements where an especially strong and long Clamp is needed, they also furnish a still heavier Clamp, with steel bar ⅜ by 1½ inch, the screw and other parts being proportioned. This pattern is made in three sizes, 6, 7 and 8 feet.

Flush Door Hangers.

The Coburn Trolley Track Mfg. Co., Holyoke, Mass.. are placing upon the market a Flush Door Hanger, which, when closed, is shown in this connection. They describe it as "the only track that allows door to open and shut laterally on hanger so that when closed the door will be flush with opening." Is especially adapted for stable doors, where it is desirable to have the same shut tight, keeping out the cold and wind. The petticoat on the door is constructed so as to allow the pendant from the trolley to slide back and forth, so as to carry the door in flush, and thus make the opening perfectly tight. One set for single door includes petticoats, pendants, roller-bearing trolleys, one each top

FLUSH DOOR CLOSED.

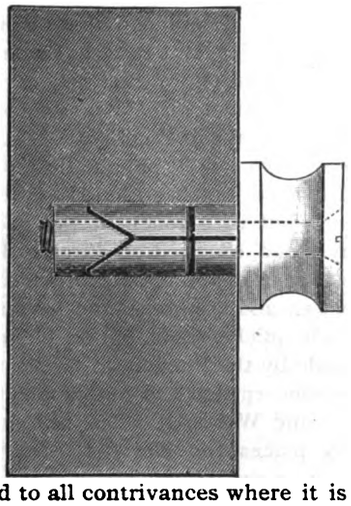


and bottom castings for front side of door, lock and handle. Hardware dealers having barn door track and extra track brackets in stock can fill orders for flush doors any time by

Digitized by Google

simply ordering sets for flush door hangers, which will be furnished as above indicated.

The Erie Cast Aluminum Coffee Pot.

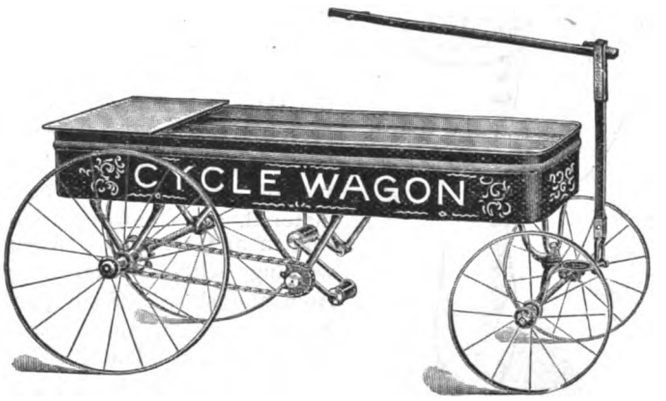


The Griswold Mfg. Co., Erie, Pa., are manufacturing a line of aluminum cooking utensils among which is the Coffee Pot, here illustrated. A feature of this pot is the fact that

the spout and strainer are cast on the pot in one piece. The hinge is described as being especially strong, being cast half on the cover and half on the pot, and is machined out to make a perfect fit. There are no seams or rivets anywhere on the article, and it is polished inside and out, the outside resembling silver. Some of the advantages in using aluminum ware are: its freedom from poisonous properties and the rapidity with which it heats. The pot comes in three sizes, 2, 3 and 4 quarts.

Expansion Bolt, for Switch Board Purposes.

The Steward & Romaine Mfg. Co., expansion bolt manufacturers, of Philadelphia, are supplying the electrical trade with a Substitute Fastener on Switch Boards which is, it is said, much easier applied and answers the purpose better than the old way. The cut herewith shows full size bolt and knob attached to a 1¼ slate. It is only furnished in brass. They furnish the bolt without knob. This bolt



may be applied to all contrivances where it is necessary to fasten up to marble or slate. They are a great help to the plumber and steam fitter in his work fastening up wash-stands, etc. Catalogue sent on application.

The Geuder & Paeschke Mfg. Co., manufacturers of tinware and sheet metal goods, Milwaukee, Wis, are doing an exceedingly large business in their galvanized iron ware department this year. The ware is made from sheet steel, and thoroughly galvanized afterwards, thus making it very strong, durable and absolutely rust proof. They have lately added to their assortment a line of Bailed Galvanized Garbage Cans, which are finding much favor with the trade. These cans are made in three sizes, so arranged as to nest closely, and are offered at prices that will allow dealers a handsome profit.

The Coldwell Lawn Mower Co., Newburg, N. Y., have been awarded the contract to supply the government with a large number of their improved mowers. They are working night and day to turn out the goods.

Spangler Cycle Wagon.

There is always something new under the sun. A pointed illustration of this fact is found in the Spangler Cycle Wagon, being placed upon the market by the Quadruped Novelty Co., Canton, Ohio. Its style and method of operation may be learned from an examination of the accompanying illustration. In a detailed description, the makers say: "The Spangler Cycle Wagon is made of the best material and constructed mechanically after the most approved methods. The axles are of the best steel, with spindles milled and fitted by special machinery. The wheels are steel, reamed for neat fitting and easy bearing, and will carry with safety 300 pounds. Brackets and supports are all of the best malleable iron, carefully fitted. Pedal cranks are of Bessemer steel, formed with dies made for the purpose. The wagon is propelled by pedals connected with the rear axle by sprockets and chain, thus providing a movement that is easy and powerful to propel on

ordinary roads. The guiding device is simple, being a joint or hinge in the middle of the tongue, allowing it to turn back over the body, within reach, so that the rider can guide with ease and safety. The size of the body is 15x36 inches, firmly and neatly made, and painted in various colors. There is a trap lid in the bottom, which being lifted provides a seat for the rider, leaving an opening in the bottom for propelling. The front wheels are of a height to pass under the body for short turning. These wagons are attractive and are fairly bounding into popularity. With children they are the accepted pastime. They combine all the features of a plain wagon and a tricycle. For utility, pleasure and amusement they excel all. No dealer will err in catering for this favorite of the youth."

At the annual meeting of the stockholders of the Savage Repeating Arms Co., Utica, N. Y., the directors made a report as to the financial condition of the company, after which Richard S. Reynolds, Denver, Col., Edwin H. Risley, Utica, William H. Patten, Canastota, Milton E. Robinson, Utica, and Harry C. Stone of Oneida were made directors for the ensuing year. The officers elected were: President, Richard S. Reynolds; vice-president, William H. Patten; treasurer, Edwin H. Risley; secretary, Harry C. Stone. The company will place the gun on the market during the present month.

Superintendent Wrigley, at the Carnegie mills, Beaver Falls, Pa., has confirmed the rumor that the Carnegie Co. will at once rebuild the burned nail mill on a much larger scale than the former plant, and with an increased capacity. The increased price of nails has induced the company to rebuild and operate the mill.

W. W. Lawrence of the W. W. Lawrence Co., Pittsburg, Pa., has taken a well earned vacation, and has left for North Cape in the "Land of the Midnight Sun." E. W. Bliss, of the E. W. Bliss Co., Brooklyn, N. Y., left on the same steamer.

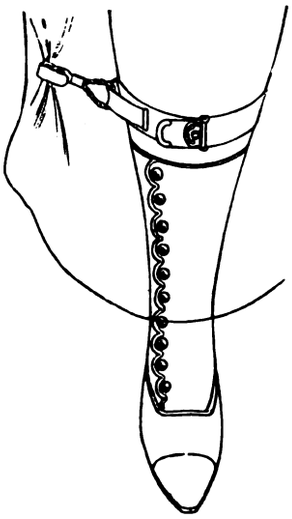
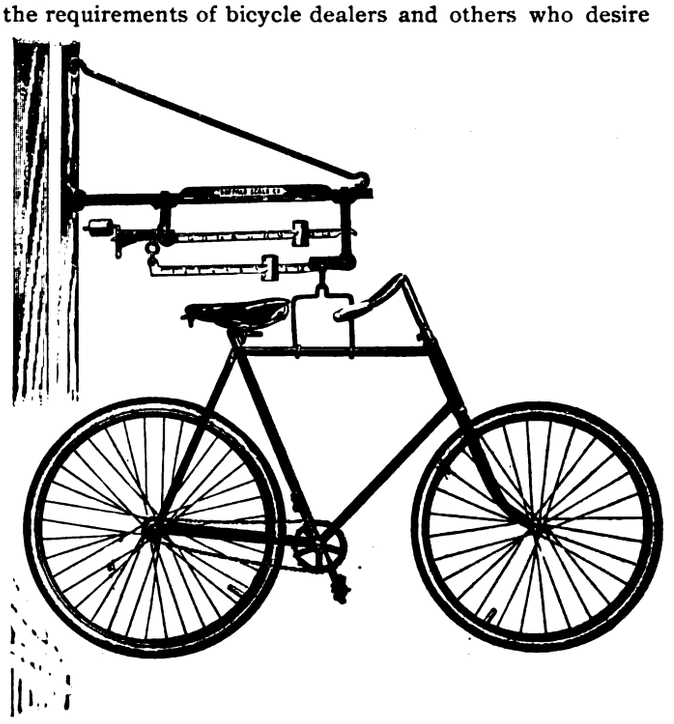
ILLUSTRATED BICYCLE NOVELTIES.



MANUFACTURERS and DEALERS are invited to make FREQUENT USE of these columns.

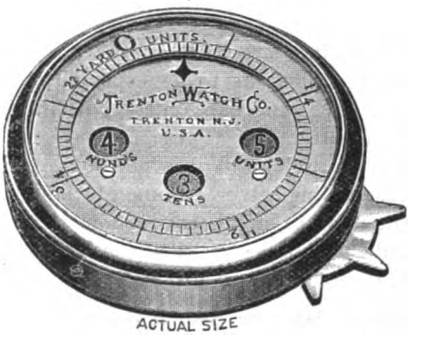
Anything NEW in BICYCLES or BICYCLE NOVELTIES should be sent us immediately. NO CHARGE, direct or indirect, is made, as our interest lies in SHOWING THE HARDWAREMAN what is going on in THE BICYCLING WORLD.

When your NOVELTY is ready, send us an Electrotype and descriptive matter, which will appear immediately.



Peterson's Bicycle Skirt Holder.

H. S. Peterson & Co., No. 112 Clark Street, Chicago, are manufacturing and selling a Bicycle Skirt Holder which should prove a boon to lady riders. The manufacturers say that "when this Holder is worn, it is impossible for the skirt to creep or blow up, and gives the wearer a feeling of security in regard to the skirt, which is fully appreciated by the rider. These Holders are invisible and adjustable, are made of the best material, are comfortable to ride in and convenient when walking without detaching from the skirt." Each pair is put up in separate boxes, nicely labeled. The illustration gives the reader a clear idea of how they are used. Price $4 a dozen, sample by mail fifty cents.



Bicycle Scale.

The Buffalo Scale Co., Buffalo, N. Y., have just put on the market the Bicycle Scale here illustrated. The capacity of this scale is from 1 ounce to 110 pounds. It is described as strictly high grade, and is put on the market to meet the demand for an absolutely correct and convenient Bicycle Scale. This Scale has been constructed to meet the requirements of bicycle dealers and others who desire to determine correctly the weight of their wheels. The beams and poises are brass, nickel-plated; the whole contrivance is handsomely finished. The scale is also arranged with a strap so that ladies' frames can be weighed as readily as a gentleman's. The hooks for holding the frame are covered with rubber tubes, so there is no danger of marring the frame when weighing the wheel.

The Trenton Cyclometer.

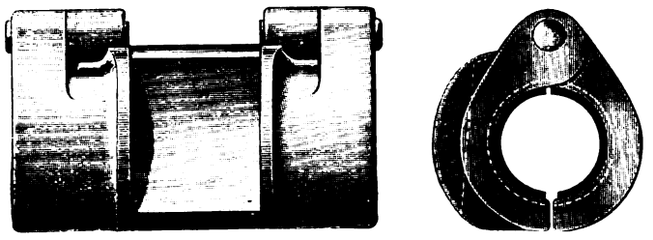
The Trenton Watch Co., Trenton, N. J., have just placed on the market a Cyclometer called the "Trenton," illustration of which is seen here. These Cyclometers have satin finished aluminum dials which will not break or crack, and have a polished aluminum case which weighs but one-third as much as nickel or brass. The figures can be readily seen from the saddle. It registers 1000 miles and repeats.

The following points of excellence are claimed for this Cyclometer by the manufacturers: small size, handsome appearance, absolute accuracy, strength and durability, noiseless and positive action, extreme lightness, weighing but 2¼ ounces, and dust and waterproof. Price, $2.

Novel Stone Cutting Tool.

P. R. Condon has just completed at his works on Broadway one of the finest air plants in New England for operating the greatest invention in his line of business—the "pneumatic and electric tool." The air compressor was built at the Clayton works in Brooklyn, N. Y., and can furnish air to operate six or eight pneumatic tools. Each tool under a pressure of 45 pounds strikes the cutting tool 12,000 blows per minute, but by a touch of the operator can be reduced to any speed required on different kinds of work. These tools do a great deal finer work than can be done by hammer and chisel, and are great time savers, as the work can be done much quicker than by the old method. The machine was made by the Pneumatic & Electric Tool Co., of New York, a concern that has put in plants at Quincy, Ill., Barre, Vt., and Westerly. The introduction of this tool in this city places the Norwich Steam Marble and Granite Works on an equal footing with the largest and best concerns in the United States for lettering, carving and finishing all kinds of stone. The reputation which this concern enjoys will be sustained now that it is equipped with all the up-to-date improvements. The tool in operation and the finished work is well worth seeing.—*Norwich (Conn.) Record.*

The Canton (Ohio) Brass & Aluminum Co., one of Canton's flourishing factories, are manufacturing a class of goods that sell fast notwithstanding the hard times. The company are in new quarters built especially for them at No. 56 East Fifth Street.



S. J. Reckendorfer, secretary of the American Lead Pencil Co., New York, is in London for a few days on his way to the Continent, where he will remain for several months, stopping in London on his way back to America a few months hence.

The Cleveland Rolling Mills Co., Cleveland, Ohio, have voluntarily advanced wages 10 per cent. in all departments.

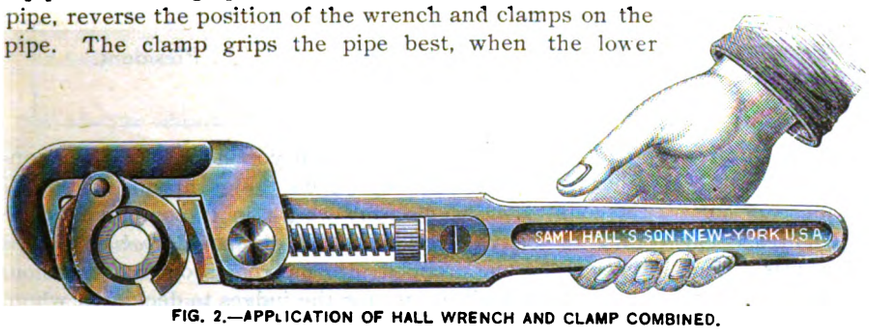
Hall's Elastic Pipe Clamp.

An admirable device just put upon the market by Samuel Hall's Son, of No. 229 West Tenth Street, New York, is shown in Fig. 1. It is known as Hall's Elastic Pipe Clamp, and is used in connection with Hall's Improved Pipe Wrench, recently brought out by the same firm, "supplying a long recognized need for a good and reliable tool to work very thin and highly polished pipe or tubing without marring or crushing it. These clamps are made of cast iron, and have an elastic rubber lining, ⅛ of an inch thick, which conforms readily to any irregularity in size or shape of pipe and prevents slipping and marring the pipe when screwing it into place. They grip with so little pressure that the work can be screwed up by hand without using the wrench up to the last one or two turns. When used with the Hall Wrench they release their grip by the reverse motion of the wrench, and move with the wrench at the next forward movement, gripping the pipe readily. The wrench need not be removed from the clamps until it has done its work, and the pipe is in place." Users are advised by the manufacturer to always place the wrench on the clamps with the hinges of the clamps on the bottom of the jaw, and the flat side of the clamp next to the end of the hook; then close the wrench on the clamp and work the handle of the wrench in the opposite direction to gripping a pipe or screwing up a nut. To reverse the motion of the pipe, reverse the position of the wrench and clamps on the pipe. The clamp grips the pipe best, when the lower wrench jaw comes in contact with the clamp, as shown in the cut. The Hall Elastic Pipe Clamp is made for all sizes of pipe or tubing within the capacity of the Hall Wrench. A finely illustrated brochure containing detailed description, price list, etc., of this new tool, is issued by the manufacturer, and may be obtained without cost, upon application.

SIDE VIEW. FIG. 1.—HALL'S ELASTIC PIPE CLAMP. END VIEW



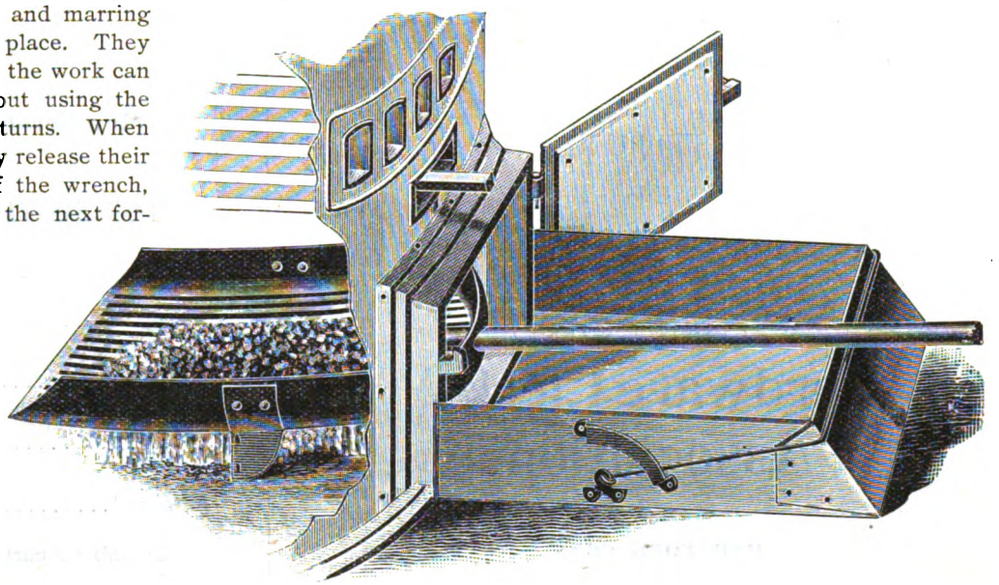


FIG. 2.—APPLICATION OF HALL WRENCH AND CLAMP COMBINED.

A Silver Question.

The Holmes & Edwards Silver Co. wish to announce to the many people who are using their silver-plated ware, the following: The silver inlaid in the back of the bowls and handles of spoons and forks is 925-1000 fine, as indicating the standard of Sterling Silver. The trade mark stamped on the Sterling Silver Inlaid goods is "E Sterling Inlaid HE." The silver used in electro silver-plating on all of Holmes & Edwards' goods is pure silver of the United States Government assay. People buying Holmes & Edwards' Sterling Silver Inlaid or silver-plated ware are assured of the quality of the silver used, and no questions will ever arise in regard to quality where the name or trade mark of Holmes & Edwards appears.

A Dustless Ash Sifter for Furnaces.

Here's a Scoop. It is an Ash Sifter for furnaces. You scoop up the ashes in the furnace ash pit, shake the sifter back and forth on its rockers or legs, down go the ashes. All the cinders stay on the Sifter or Scoop; all dust stays in the ash pit. Now draw the Sifter out, letting it slide on its rockers. A scraper underneath will draw the fine ash out at the same time into the ash pan, if you desire it. May be you had on your dress suit, or Sunday suit or your business suit while you did all this. It makes no difference; there was no dust except in the ash pit where it belongs, and all fuel was saved. Some people clean the slack out of the stove size, hard or soft coal, with this Sifter. It does it well. The special ash pan is handy but not essential. The Sifter, Lackawanna Sifter it is called, is stamped out of steel, well made, light, durable. Retails for about $1.25. Manufactured by the Lackawanna Sifter Co., Cleveland, Ohio.

The McNeal Pipe Foundry Co., Burlington, N. J., have voluntarily restored the former scale of wages. The increase is about 10 per cent. and affects 500 men.

The Rice & Sargent Engine Co., of Providence, R. I., have received an order for a vertical engine 28 and 60x48, 1800 horse-power, 100 revolutions, 150 pounds steam, with pulley fly-wheels adapted for a rope drive, and also a standard engine 12x30, 75 horse-power, 110 revolutions, for the Whitman Mills, New Bedford, Mass.

George H. Chatillon, head of the firm of John Chatillon & Sons, No. 85 to 93 Cliff Street, New York, is in Europe enjoying a well earned rest. Mr. Chatillon has worked hard for twenty-five years, and this is the first vacation that he has allowed himself to take.

A dispatch from Cleveland says that the Consolidated Steel & Wire Co., of Illinois, has absorbed the property of the Baackes Wire & Nail Co., of Cleveland, which is one of the biggest concerns in the country. The price was $500,000.

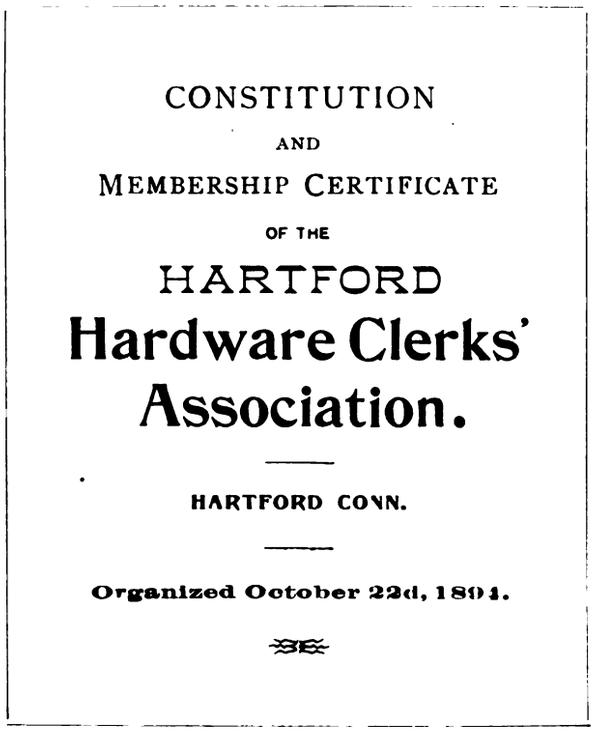
THE HARDWARE CLERK'S CORNER.

HARTFORD HARDWARE CLERKS' ASSOCIATION.

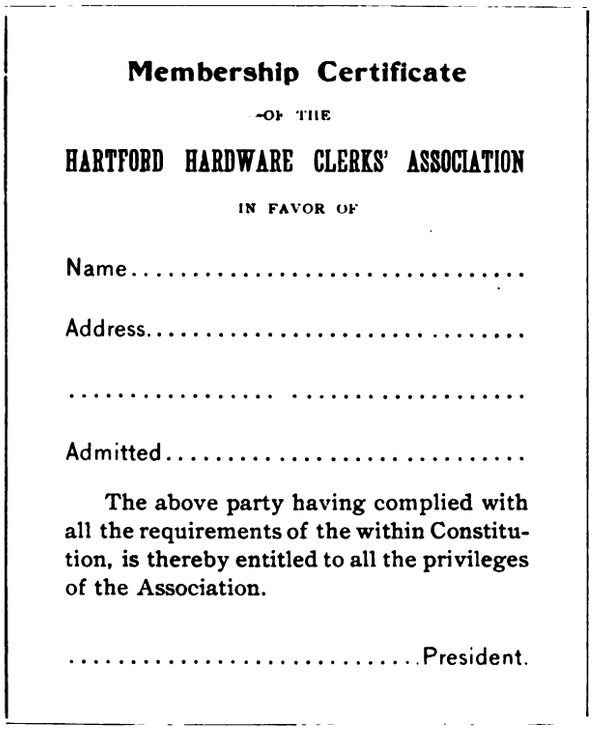
The Hardware clerks of Hartford, Conn., have organized, and are conducting with great success an association for mutual profit and pleasure. We have taken considerable interest in watching this movement from the start, and in order that their plans and purposes might be laid before the great body of Hardware clerks of the country, have asked a leading member thereof to prepare a brief account of the origin of the club, which is here given:



"The first thought of the Hardware Clerks' Association was suggested by a supper given by the clerks of one of the Hardware stores, on the occasion of the retirement from the business of a fellow clerk. At that time the 'boys' proved themselves of such executive ability, especially at the well spread table, that the idea of repeating the experiment once a year immediately found hearty support. The high class oratory, the bright and witty stories, and the general good feeling manifested, made a favorable impression.

"The next thought was: Why not extend its scope so as to take in the clerks from the other Hardware stores? The next development was along social lines. If it was a good thing for Hardware clerks to meet once a year, forgetting for the time petty jealousies and competitions, why not meet oftener, get better acquainted with each other, and see how much of common interest and helpfulness might be found in considering matters closely related to our common occupation? So the matter of drawing up a constitution was assigned to a committee, and at a meeting called October 22, 1894, the present constitution was unanimously adopted. Our membership at present is twenty-three, with the prospect of additions in the near future.

"As our membership is composed of musicians, actors, orators, humorists, etc., of no mean ability, our business meetings have generally been followed by very creditable entertainments.



"The rules regulating the conduct of our members take a high standard, and our Association commands the respect and confidence of our employers. In no way do we attempt to dictate to them in business matters. On one occasion we petitioned them that their respective places of business should remain closed on the five principal holidays instead of opening part of the day, as is customary. Not all the firms being able to come to an agreement on the question, the matter on our side of the case was dropped. An independent attitude, however, has been taken by some of the concerns who favored the movement, and we eventually look to the obtaining of our reasonable request.

"One meeting was held in connection with a 'trolley ride' out to Elm Tree Inn, a romantic old tavern in the beautiful suburban town of Farmington, about eight miles out from the city. A more appropriate place for a Hardware clerks' banquet would be hard to find, as every feature of old colonial architecture has been carefully preserved, and some of the specimens of antique Hardware ought some day to find an appropriate resting place in a museum.

The above party having complied with all the requirements of the within Constitution, is thereby entitled to all the privileges of the Association.

.....President.

"The poverty social to which you have referred, is another instance of the way we do things up this section of the country. Coxey's army wasn't in it, compared to the gang of dusty, dilapidated and dissipated *looking* tramps that one by one dropped into our rooms on that occasion. It was a difficult matter for the judges to decide to whom the prize for the best impersonation of Weary Wraggles should go. The entertainment opened with a debate on the subject: '*Resolved*, That the final results of the hard times will prove more beneficial than detrimental to the country.' The debate was decided in favor of the negative. A tableaux entitled 'Opening a Keg of Nails' created considerable merriment. The actor in the tableaux called the attention of the boys to the many recent instances of defalcation and misuse of private and public funds. Then beckoning our unsuspecting treasurer to come forward, he quickly knocked in the nail keg head and dexterously clasped a chain with a thirty-pound hitch weight attached, to the leg of said treasurer, remarking as he did so, that he guessed now we would know where to find our man. Music, instrumental and vocal, followed, and lastly a hard times supper, consisting of crackers, cheese and coffee, with clay pipes and tobacco as dessert. At other

Digitized by Google

meetings considerable time has been occupied in relating both ludicrous and trying store experiences.

"It is our aim also to bring up as often as possible matters for discussion on topics of the time, especially those relating to the Hardware business. We have no permanent quarters as yet, but hope that sooner or later a room fitted up with good reading matter, piano, and modern club conveniences, may be secured."

The constitution of the Association, which is original with this body, is in many ways an admirable document, and we take pleasure in here giving it in full, the cover and membership certificate being given in *fac-simile:*

CONSTITUTION.

ARTICLE I.—NAME.

This organization shall be called the Hartford Hardware Clerks' Association.

ARTICLE II.—OBJECT.

Its object shall be to improve social acquaintance and promote a more friendly feeling among its members, to give an opportunity for discussion and interchange of opinion on any topics of general interest to the Hardware trade, and to secure united effort and influence in any worthy cause which may properly receive its attention.

ARTICLE III.—MEMBERSHIP.

Sec. 1.—Any person of good character, and whose experience and qualifications in the Hardware business are satisfactory to the committee, may become a member, on receiving a two-thirds vote of the members present at any regular business meeting of the Association.

Sec. 2.—Applications for membership must first be presented to the Executive Committee, and if approved by them, the Secretary shall report favorably on same at the next regular meeting of the Association, at which time the members shall vote on each application.

Sec. 3.—Each person shall be required to sign this constitution as a pledge of their obedience to its rules and regulations, as hereafter named.

Sec. 4.—Any member charged with violating the by-laws of the Association, may, after a fair hearing, be suspended or expelled by a two-thirds' vote of the members present at any regular meeting.

ARLICLE IV.—DUES.

Sec. 1.—Each application for membership shall be accompanied by a payment of an initiation fee of $1.00.

Sec. 2—Each member shall pay to the Treasurer a monthly due of twenty-five cents.

Sec. 3.—Any member failing to meet this requirement shall be duly warned by the Treasurer, and if at the end of four months has not canceled his indebtedness, he may forfeit his membership in the Association.

ARTICLE V.—OFFICERS.

Sec. 1.—The officers of this Association shall be and rank as follows: President, Vice-President, Secretary and Treasurer, who, with two other members chosen by the Association, shall constitute the Executive Committee.

Sec. 2.—The officers shall be chosen by ballot at each annual meeting, and shall hold their offices until their successors are duly chosen and qualified.

Sec. 3.—The duties of the President shall be to preside at the business meetings of the Association, to meet and advise with the different committees, and to exercise a general watch and care over the interests of the Association.

Sec. 4.—The duties of the Vice-President shall be to officiate in the absence of the President.

Sec. 5.—The duties of the Secretary shall be to preserve a correct record of the membership of the Association, attend to all correspondence, and keep the minutes of all business meetings.

Sec. 6.—The duties of the Treasurer shall be to collect all dues or assessments, and to have general charge of the finances. He shall pay out no money unless so authorized by the Association, and upon a written order signed by the President. A written report of the financial standing of the Association shall be given semi-annually.

Sec. 7.—The duties of the Executive Committee shall be to exercise general supervision over the affairs of the Association, to see that the rules are sustained, and to pass judgment upon all applications for membership.

Sec. 8.—Other committees—as for instance an Entertainment Committee—may be chosen by the Association as seems advisable.

ARTICLE VI.—MEETINGS.

Sec. 1.—The regular business meetings of the Association shall be held on the first Monday evening of each month, unless otherwise specified in the call of the Secretary.

Sec. 2.—The annual meeting of the Association shall be held the first Monday evening of October, and the semi-annual meeting on the first Monday evening of April of each year.

Sec. 3.—Special meetings may be called by the Secretary, upon the instruction of the President.

ARTICLE VII.—RULES.

Sec. 1.—No intoxicating liquors shall be drank in the Association rooms, and any member guilty of such offense makes himself liable to expulsion from the Association.

Sec. 2.—No betting or card playing for money or other valuable consideration will be tolerated.

Sec. 3.—All members are urged to refrain from profane speech, and are expected to conduct themselves in such an orderly and gentlemanly manner as will do credit both to themselves and to the Association.

Sec. 4.—Members are not expected to bring visitors to the meetings unless special arrangement has been made for same.

ARTICLE VIII.—QUORUM.

Fifteen per cent. of the regular membership shall be considered a quorum for the transaction of business.

ARTICLE IX.

These rules may be amended or suspended by a two-thirds' vote of the members present at any regular business meeting.

CONFESSIONS IN ORDER.

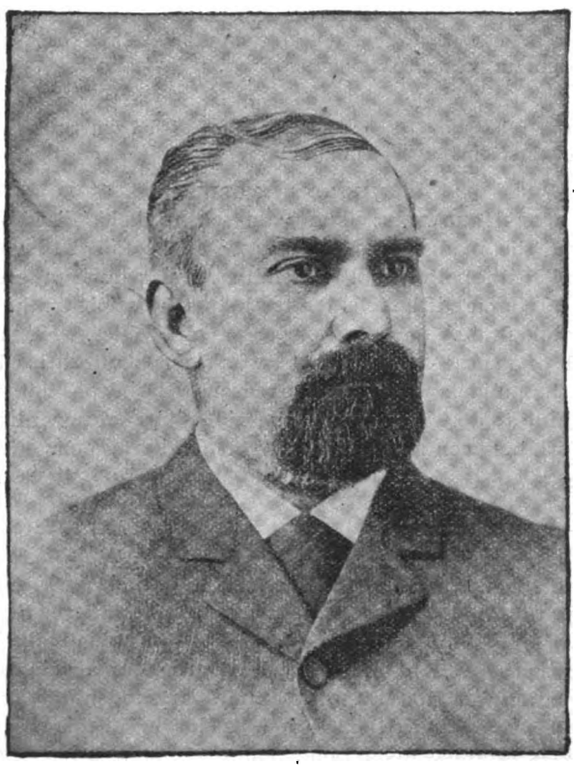
EDITOR HARDWARE: The "unsuccessful clerk" who is telling the readers of HARDWARE why he failed to "get there" with both pedal extremities, will require a great deal of courage if he tells the truth and the whole truth. It is a difficult task to confess our errors and follies. I am not much of a success myself, but I would not like to arise before the public and give all the reasons. Drink has not had anything to do with it; perhaps laziness has. I never liked to work between meals. Let the confessions go on.

Baltimore, June 18, 1895. MIDDLE-AGED CLERK.

Perry Stove Co.

A dispatch from Albany, under date of June 17th, says: Upon the application of the trustees of the Perry Stove Co., of this city, one of the largest stove manufacturing firms in the United States, an application for a voluntary liquidation was filed in the Supreme Court, and Judge Fursman has appointed Gen. Selden E. Marvin, of this city, as receiver, who has given bonds and taken possession of the affairs of the corporation. The receiver is authorized to continue the manufacturing business without interruption, and with the complete stock on hand all orders can be filled. The stockholders at their annual meeting decided that the condition and the prospects of the company made it undesirable to continue the business on its present basis. The company was originally started six years ago, with a capital stock which has proved inadequate for the prosecution of its work on a scale large enough to be profitable, and in the depressed condition of business it has not been found feasible to increase it. It has, therefore, been wisely decided to liquidate its affairs in a voluntary manner, as provided by law, while its assets are amply sufficient to meet its obligations. With property which is valued at nearly three times the amount of its indebtedness, there can be no doubt of its meeting its obligations in full.

Divine Brothers, high grade Cotton Buffing Wheels, Chadwicks, N. Y.: We take pleasure in saying that we find HARDWARE *the best advertising medium we have*, and the results are very satisfactory.



HARDWARE costs only One Dollar a year.

Col. Ben Lovell: A Deserved Tribute.

The following generous and truthful tribute to a gentleman well known in the Hardware trade, is from a recent number of the New York *Recorder:*

Cycling from the start has been a queer game, and one, too, that required many friends before it got fairly on its feet. It is not so very long ago that a cyclist was more a subject of ridicule than any other citizen; looked upon as a "dude," or light-minded, if nothing more harmful, and unworthy the slightest notice—a thing to be kicked and buffeted about by any hoodlum or road hog. From the beginning of cycling in this country the makers have been its strongest bulwarks, and to them, individually and collectively, is due the credit for the proud position we riders of the bicycle hold. For are we not the "fad" of the hour? To be a cyclist nowadays is an honor, and the veteran, even of a season's standing, is regarded by the uninitiated as a superior being. To the members of the trade, therefore, we owe much, as it was their pluck and their money that have made for us our position. Through the

purchase of space by them in the pages of papers and magazines we have won over to our side the publishers of nearly every kind of journal. What has been the effect of this distribution of money? We are talked about favorably, and the opinions of learned people in all professions have found publicity which might otherwise have occurred, but it is doubtful.

Among the men who early felt the benefits of cycling, and did not hesitate to expend money, is Col. Ben S. Lovell, of Boston, treasurer of the John P. Lovell Arms Co., of that city. Their firm name has been a familiar one for over fifty years, having been established in 1840, doing a sporting goods and gun business. Being in a kindred trade, it was but natural that they should engage in the making and selling of bicycles. Their success has been unbounded, as they have made a name for the Lovell Diamond Cycles, that is a familiar household one in every hamlet in the land. It is not possible to have done that without cost, and a considerable one, too, as readers of current literature will admit, for have not all of us encountered the symbolic words "Lovell Diamonds," and known them to represent the bicycles of the Lovell Arms Co.? To estimate the gross amount that has been expended for advertising would be a difficult task, and well nigh impossible, but it is said that considerably over $100,000 was spent by them during 1894 in printer's ink. All the big Eastern dailies had entire pages, which cost lots of money, and the magazines filled many pages, exploiting Lovell Diamond Cycles.

Can it be wondered at, then, that cycling has become popular, when men like Colonel Lovell spend such sums to make it so? One publisher of a big Boston daily has stated that to his mind much of the demand for wheels this year can be laid at the door of the Lovell Arms Co. This certainly is eulogistic enough, and smacks largely of the truth.

John P. Lovell, the founder of the house, is still active in business, although the bulk of the responsibility rests on Col. Ben, as he is called by his friends. The latter is a familiar figure in all of the large cities, doing business with representative houses in the sporting goods trade and in his line of duty, visiting them frequently during the course of the year.

While we enjoy cycling to its uttermost, have had stringent laws abolished, new roads opened for us and the bad ones rebuilt, let us not forget that were it not for the clamor of wheelmen in the columns of the press, backed by the power money as expended by the makers, we would not be the privileged characters that we are, enjoying blessed sunshine and health as only a bicycle rider who uses his wheel can.

So again we say that, among others, the Lovell Arms Co., and Col. Ben, as its representative, deserve the gratitude of the great army of wheel men and women.

Latest Trade Publications.

The Boston Belting Co , Boston and New York, have published an illustrated catalogue and price list of their rubber mats, matting and step treads; and also a railroad edition of their mechanical rubber goods. Both books are neat, handy, and convenient for a reference. In a note of introduction to the last named they say: "In compiling this catalogue, our aim has been to place in the hands of railway officials a M. C. B. standard size (3½ by 6 inches) price list of mechanical rubber goods, such as are generally used by railroad companies. Our complete illustrated catalogue, or special printed matter on any particular subject, will be gladly furnished upon application. An experience of over sixty-five years in the manufacture of rubber goods has given us a knowledge of the business that enables us at all times to furnish first-class reliable goods at the lowest possible prices, quality being taken into consideration. Our manufactures are in use on many of the leading railway systems of this country, and are well and favorably known throughout the world, and we shall endeavor in the future, as in the past, to produce goods that will give perfect satisfaction to the consumer, and thereby hope to merit a share of your patronage."

The Bridgeport Gun Implement Co., Nos. 313 and 315 Broadway, New York, have published a handsome illustrated price list for 1895. It fully describes and illustrates their extensive line of loading and cleaning implements for firearms, bicycle sundries, Forstner auger bits, etc. All new goods to date are included. Especial attention is called to their hand loading outfits and new rapid loaders for nitro and black powder, standard powder and shot measures for all powders, new style cleaning sets, and many improvements in the models of their regular goods. Discounts will be quoted to the trade upon application, and samples forwarded free, by mail, upon receipt of list price. This catalogue cancels all previous editions.

The R. E. Dietz Co., No. 60 Laight Street, New York, have issued a new and complete catalogue of their lanterns, driving and street lamps, oil and gas stoves, commercial, railroad and other lanterns, etc. It is fully illustrated, and is a valuable and handy compendium of this line of goods. A copy will be sent to anyone wishing it.

The Eureka Wire Fence Machine.

The illustration herewith shows the Eureka Wire Fence Machine put on the market by the Eureka Fence Co., Richmond, Ind. It has been designed to build an all wire fence in the fields to conform with the lay of the land. The manufacturers state that it is simple in its principles and construction, and thus one can easily learn to operate it. This machine consists of three principal parts, viz.: the loom, frame and spooler. The loom has two spools in the centre upon which the vertical wires are wound, and are held in place by a bolt which serves as a tension at the same time. These vertical wires pass through the outer or end wheels, over anti-friction rollers, and are twisted around the horizontal wires as often as thought best. Slots are cut in the end wheels, into which the horizontal wires are passed preparatory to the twisting of the vertical wires around them. The frame guides the loom down across the horizontal wires and holds the loom firmly in position while the twist is being made. This frame has notches in it, which serves to space the wires regularly. The spooler, as its name indicates, is used for spooling the wire. It has a large driving wheel, adding greatly to the speed with which the wire may be spooled. It is easily fastened, and firmly held in place by means of a large thumb screw. Any size wire may be used for the line wires, but numbers 12, 13 or

14 are the sizes best adapted for use as cross wires. "Every person understands that substantial end posts are essential for any form of wire and picket fence, or an all-wire fence. These should be placed in position so as to remain as firm as a rock, by means of braces, etc. Holes should be bored through one of the end posts, so that the wires may be passed through and wound tight by the ratchets. These should be so spaced as to correspond with the notches in the frame. Place wire on reel at this ratchet post, run out the upper wire, fastening it securely to the finishing post, and as you return fasten this wire in position by staples lightly tacked to upper part of every third, fourth or fifth post, the frequency depending largely upon the distance between these posts. Take all the slack out of this wire possible by hand, cut off wire and pass through post, fastening to ratchet. Draw this wire tight. A good plan, where long stretches of wire are made, is for two persons to take hold of this wire, and by united effort take out the slack, having one to hold the wire at second post by means of pliers placed on side of same next to end post, and thus using this post as a fulcrum. If the slack is not well taken out before drawing it up by the ratchet, the spool becomes full. Run out each wire in the same manner until all the wires are placed in position. Go to the ratchet post, draw the top wire tight, if slack; then the second, and so on until all are drawn tight. See that all the wires are stretched evenly and tight. Take frame and place in position near ratchet post, placing loom in same, holding it in place at upper part of frame until wire is placed in slots of the frame; drop the loom so that the wire may pass into the slots in outer wheels of loom. See that the vertical wires from spools are passed through and between the anti-friction rollers sufficiently far enough to press against the frame before twisting. Turn crank of loom towards you a sufficient number of times to make the desired number of twists around the horizontal wires ending with slot upward in twister that received the wire at first. Press down the loom until the second wire enters the lower slot, then set the loom in motion again by means of the crank turned in the same direction you did at first. Continue in same manner until the lower wire is reached. Force loom and frame away from the fence and cut the vertical wires as shown in the illustration. Place frame and loom in position further along the line corresponding to the width of the frame and repeat the operation. The makers further state that aside from the low price at which this fence can be built, it makes a neat, visible and very substantial fence. Winds will not affect it. It does not cause the snow to drift, and the fence rows can be kept neat and clean at all times from the growth of weeds, briers and underbrush. The vertical or cross wires prevent the spreading of the horizontal wires, and are so fastened that they cannot be moved. It does not injure stock. It lessens the number of posts so necessary in the construction of all other forms of fence. By the use of iron or steel posts it makes a fence fireproof and one that will last a lifetime."

New York Hardware Club.

The special meeting of the New York Hardware Club, called for June 20th, to act upon several proposed amendments, was quite largely attended, and changes proposed in the constitution were made by almost unanimous votes.

The meeting was held in the library at 12 M, President W. H. Williams in the chair. The minutes of the last meeting were read by Secretary Varick and approved. The chair briefly explained the proposed amendments, and was followed by Brace Hayden, who urged the advantages that would arise from an increased membership.

A. P. Mitchell and Charles F. Clark were appointed tellers.

The first amendment voted upon and carried was:

"The number of members shall consist of six hundred resident and two hundred non-resident members."

This is an increase of one hundred in the resident membership. A number of applications are upon the bulletin board, and can now be acted upon.

The second amendment, which was also adopted by a large majority, was as follows:

"The constitution may be amended at any meeting of the Club by a vote of two-thirds of the members present, provided such amendment is approved within sixty days by a majority of the Board of Governors. A notice of the proposed amendment shall be furnished to the secretary and posted on the bulletin board of the Club at least twenty days before the meeting at which it is proposed to consider the amendment, and the secretary shall cause such notice to be printed and sent to each member at least ten days before such meeting."

There is a picture on exhibition in one of the Board rooms of the Hardware Club. It is a pastoral scene entitled "Le Soir," by Louis P. Dessar. This picture has hung in the Salon at Paris, took a medal at the World's Fair, and will be sent to the St. Louis Exposition. It is a work of great merit.

Incorporation papers of the Kirschbaum Hardware Co., of Collinsville, Ill., have been filed. Capital $5000. Stockholders are Joseph H., Elise C. and Ernestine C. Kirschbaum.

SOUTHERN HARDWARE JOBBERS' ASSOCIATION.

The Southern Hardware Jobbers' Association held its fourth annual convention at Louisville, Ky., on June 11th, 12th and 13th, and the programme which was outlined in our last preceding issue, was fully carried out, in a manner which reflected the greatest credit upon the hospitable iron and Hardwaremen of Louisville, and upon the officers and members of this Association, which has long since been recognized as one of the most important and influential among the many Hardware Associations in America to-day.

Ample preparations had been made for the entertainment of the visitors, and for the pleasant and expeditious transaction of the business in hand. The Executive Committee having matters in hand were as follows:

F. F. Gilmore, Chairman,
Hilton Collins,
W. Garnett Munn,
Charles Ochsenhirt,
R. M. Kelly, Jr.,
E. M. Hubbert.

A reception committee had been appointed, of which C. F. Huhlien, of B. F. Avery & Sons, Louisville, was chairman, and consisting of the following gentlemen:

W. Garnett Munn, Brennan & Co.
Thomas Brennan, Brennan & Co.
Owen Gathright, Jr., Harbison & Gathright.
Charles Ochsenhirt, Fischer-Leaf Co.
W. C. Noyes, Kentucky Wagon Mfg. Co.
J. W. Gaulbert, Peaslee-Gaulbert Co.
Stuart Duncan, Peaslee-Gaulbert Co.
L. W. F. Hart, Jr., Hart Hardware Co.
Wm. Heyburn, W. B. Belknap & Co.
John W. Price, W. B. Belknap & Co.
Charles P. Robinson, Robinson Bros. & Co.
Hilton Collins.
F. F. Gilmore.
F. S. Ouerbackur, O. K. Stove & Range Co.
James G. Caldwell, Birmingham Iron & Steel Co.
Charles Semple, B. F. Avery & Sons.
E. E. Paine, B. T. Avery & Son.
W. M. Hart, Hart Hardware Co.
Robert A. Hart, Hart Hardware Co.
S. W. Jones.
H. H. Beers.
A. C. Dodd.
Thomas Ellis.
T. H. Gossett.
Robt. M. Kelly, Jr., Davis, Kelly & Co.
W. T. Pyne, W. T. Pyne Mill & Supply Co.
A. F. Callahan, Dennis Long & Co.
E. M. Hubbert, Hubbert & Hubbert.
W. T. Drummond, Drummond Mfg. Co.
W. A. Caplinger, Peerless Mfg. Co.
F. H. Forman, Consolidated Steel & Wire Co.
Irby Bennett.
James P. Kelly, Kelly Axe Mfg. Co.
W. C. Kelly, Kelly Axe Mfg. Co.
J. E. Whitney, Kelly Axe Mfg. Co.
Ed. H. Garcine.
O. C. Mead.
Ed. Bernard.
Banks Rucker.
Fred. Seeley.
A. G. Twigg.
Anton Trunk.
Sidney Kastor.
Charles H. Weir.

The first session of the Association was held in the rooms of the Board of Trade, at 11 A. M. on Tuesday, June 11th. The handsome decorations in the hall were an attractive feature of the occasion. A list of the members and visitors who were present is here given:

President A. D. Langstaff, of Memphis; Secretary W. P. Smith, W. E. Gibbons, Bruce Keener and J. S. Brown, of Knoxville; N. A. Gladding, Memphis; Phil R. Rice, New Orleans; E. G. Ruckwell, Memphis; C. T. Kensel, Philadelphia; G. B. Durrell, Harriman, Tenn.; M. Hirsch, Chicago; S. A. Allen, Knoxville; H. W. Forde, Nashville; J. B. Schuster, Selma, Ala.; E. W. Clark, Chattanooga; J. D. Moore, Birmingham; J. C. Beering, Houston, Tex.; W. E. Austen, Atlanta; John Cantwell, St. Louis; W. W. Crandall, Nashville; W. M. Sperry, New York; J. Van Dickman, Little Rock; A. Baldwin and B. F. Eskelman, New Orleans; H. P. Chenowith, Maysvills, Ky.; Thomas Ellis and T. H. Gossett, New York; Charles R. Wilcox, Baltimore; E. H. Garcian, Richmond, Va.; W. G. Smythe, New York; C. T. Jenkins, Baltimore; J. C. Sproul, Annistown, Ala.; H. C. Bettis and Geo. E. King, Atlanta; J. T. Quarles, Baltimore; H. W. Caffrey, Philadelphia, and George H. Brown and R. H. Banning, New York.

In addition there were quite a number of non-official visitors, and as very many of the members and guests were accompanied by ladies, nothing was wanting to make the assemblage harmonious and attractive. The meeting was called to order by the chairman of the reception committee, Mr. Huhlein. After a few appropriate remarks by this gentleman he introduced Morris B. Belknap, president of the Louisville Board of Trade, who, in an eloquent address, extended the welcome of the city at large and of its business men especially, to the visitors. He said that the city had thrown wide open its doors to welcome them, and hoped their stay might be pleasant and profitable, adding that they were certainly among their friends, who wished them great prosperity and full enjoyment.

A. D. Langstaff, president of the Association, next took the chair, and after a few appropriate words acknowledging the invitation of Mr. Belknap, delivered his annual address in the following words:

PRESIDENT LANGSTAFF'S ADDRESS.

As president of the Association and in my own behalf it affords me genuine pleasure to express appreciation for the generous welcome offered us.

This appreciation is increased inasmuch as you have extended the welcome to the friends whom we have invited to meet us in your city. It would be superflous to make a statement relative to the hospitality of Kentuckyians, as it is acknowledged everywhere. Wherever we meet a Kentuckian, whether on his native heath or other lands, we soon receive evidence that he possesses to a marked degree that kindliness of manner and generosity of spirit that constitute the true gentleman. This old Kentucky welcome that you have extended your guests to-day adds confirmation to the exalted estimation in which you are held by those who have been your guests on former occasions. I have enjoyed that honor. I was personally very well satisfied when the members of our Association, having received invitations from both Pittsburg and Louisville to hold our next annual meeting at their respective places, decided to accept the invitation from Louisuille because of its more central location.

Among the other inducements offered by the resident member of our executive committee, Capt. C. F. Huhlein, was a genuine Kentucky welcome. Upon a previous occasion, upon a similar errand as that which has brought us here to-day, I in company with several of our Association, visited this city. Upon that occasion our party was offered, to use Mr. Belknap's words, when he welcomed us, a hearty welcome. We were received with outstretched hands and were escorted to visit friends, some of whose domiciles were "around the corner." We were taken in carriages;

Digitized by Google

we were taken in drags to visit the beautiful parks, and when sudden rain overtook us by the wayside we were invited to the hospitable home of Capt. Charles Sample. There we beheld crushed ice and various kinds of liquids that are calculated to improve the taste of crushed ice. While the rain poured down from clouds, dispelling the heat that had ranged from 90 to 100, we, at the invitation of our host and his lovely wife, proceeded to follow the example of Mother Earth, and while she was partaking of refreshing showers we partook of crushed ice, showered with that product of which this same Mother Earth of Old Kentucky is so famed.

Some of the company would, between these inside showers, look out of the window to see if the rain still continued, apprehending that the discontinuance of the outside shower would be sufficient cause for the discontinuance of the inside shower. When we entered Capt. Sample's home our temperature was 90 to 100; when we departed our spirits were revived and our temperature was lowered as were the spirits that were found in Capt. Sample's.

At the close of our journey we were invited to a lunch. Here another surprise awaited us, for instead we found a banquet board adorned with flowers. Gathered about it there were brought the most palate pleasing solids and fluids. The welcoming hands, the drives, the entertainment by the wayside, the lunch a la banquet, was what Mr. Belknap termed a hearty welcome.

When I received Capt. Huhlein's invitation and read the words "We will give you an old Kentucky welcome," I at once recalled our previous "hearty welcome." Anticipating that it would be more comprehensive, and having the welfare of my fellow members at heart, when I wired him our acceptance I placed a limit on the extent of the welcome as pertaining to refreshments.

Speaking of refreshments at the Richmond convention, you may all know that Virginia is specially noted for wonderfully fragrant mint, which, when partially submerged in certain liquids and frozen water, produces a beverage worthy of the mother of states. It was noted at that convention that the Kentuckyians were very partial to this beverage. There is no question but that old Kentucky exceeds all other States in the production of that liquid. I have never heard that her soil produces mint. I have heard, however, that she produces the finest blue grass on the face of the earth. I am not prepared to state how far nor to what extent blue grass could be substituted for mint in the beverage alluded to, but I know there is such a love for "Old Kaintuck" in the hearts of her sons that they would be prepared to assert that whatever fragrance might be lacking in the blue grass of Kentucky when used in that composition as compared with the mint of Virginia would be more than compensated by the superior aroma of the liquid.

Kentuckians love their State. They have reason to be proud of its products. Whenever the question arises as to which State produces the finest grasses it is always answered —Kentucky in the production of her famous blue grass surpasses all others.

Whenever the question is asked as to which State produces the most world renowned thoroughbred horses, whether the horse is required to draw the coach and must be possessed of stately carriage and reasonable speed, whether the horse is required for calvary purposes and must possess speed and endurance and intelligence so that he will understand the bugle's blast when given on the battlefield, or whether for the race track, where he is required by his speed to outstrip all competitors, the question is always referred to the blue grass fields of Kentucky.

When a boy upon my father's farm in Canada I read the history of Kentucky, and my youthful fancy was filled with the story of brave men and equally brave women, who, possessed with the spirit of advancement, whose motto was "onward," willing to endure the hardships and privations of frontier life, had left the comforts of home behind to build another home in those primeval forests. I read that when the husband would go to his work in the morning he always carried his trusty rifle, which was ever near him during the day, so that he might protect his home from the wild beasts or equally wild but no less merciless Indian. I read that while the wife remained at home attending to the domestic duties she also had near at hand another rifle, to the use of which it was essential that she should be accustomed so that she might defend herself and the lives of her children from the same foes. We need not wonder that from such fathers and mothers have come the fair and beautiful women and the brave and honorable men that justly lay claim to that "Old Kentucky Home," of which poets have written and musicians have sung.

These annual meetings which bring together the merchants and manufacturers from the various States are productive of business benefits. They afford opportunities to make new friends and renew old friendships. They serve to link together by business interests and social ties, which are among the strongest links that can be forged, the citizens of various sections of our common country.

That these social opportunities may be enhanced we have invited the ladies to attend our conventions. Officially and personally I extend to the ladies who have accepted our invitations a very sincere welcome and hope that your enjoyment may be as complete as is our pleasure in having you with us.

The purposes of our Association are to promote business and social relations among its members. At our last convention, held in Richmond, invitations were extended to manufacturers and importing firms, with whom the members of our Association had business relations, but with whom during the past years, as a result of changed condition of business, they had not had opportunities of personal association.

It was a very great satisfaction to all of us to grasp the hands of those friends, and in the conversations that followed there were many reminiscences of past days that were referred to, which were very interesting. "Old Times," when profits were larger was very thoroughly discussed and compared with the then depressed times, with the conclusion very distinctly in favor of "old times." There were none who escaped the anxiety attendant upon those dark days. Yet there were some at that convention that were more sanguine than others, who were confident that the few rays of sunshine which were endeavoring to pierce through the gloom and the clouds that surrounded us would be followed by others, and the clouds would be dispelled and sunshine reign supreme.

One of the beneficial results of that meeting was the encouragement given in that direction. That brighter times have come and there are less clouds and increasing sunshine all over our land is evident. Even the clouds that remain have a golden or silver lining in accordance with the financial views of the individual.

I sincerely hope that each one of you has felt the sunshine of returning prosperity, and that for many years to come your pathways may be brightened by the light of increasing profits, and that the smiles upon your faces may betoken inward happiness, that should always possess those who by untiring energy, coupled with intelligently directed efforts, produces a satisfactory balance in your profit and loss account.

No longer does each mail bring us the sad tidings of lower prices which have been absorbing profits faster than we could make them, as has occurred during the past three years. First came the news prices are steady; then came prices advancing; then came the glad tidings, prices are withdrawn. Let us forget the dark hours of the past and with our faces turned to the light that is daily enlarging, fol-

Digitized by Google

low the glorious example of the pioneer men and women of Kentucky and let our watchword be "Onward."

The business to come before the convention will be indicated at the several sessions. In previous communications to the members of the Association that have been printed in the trade journals I stated the benefits that have accrued from the plans formulated at previous conventions. I hope that increased good results may follow the efforts to be made at this convention.

At the conclusion of the president's address remarks were made by Hugh McCaffrey, of the McCaffrey File Works, Philadelphia; Irby Bennett, of the Winchester Repeating Arms Co., of Memphis, and others.

F. F. Gilmore, on behalf of the local committee of arrangements, briefly outlined the arrangements which had been made for the pleasure of the members and their guests. He stated that at the close of the afternoon session, carriages would be provided for a ride about the city and its suburbs, and that on Wednesday evening there would be an excursion on the Ohio River with music, refreshments, etc.

Mr. Huhlein read a letter from Mr. Nott, vice-president of the Louisville & Nashville Railroad Co., inviting the members of the Association and their guests to accept the tender of a special train on Thursday or Friday, in which to visit the Mammoth Cave.

On motion of W. P. Smith, of Knoxville, the thanks of the convention were tendered to the local committee and to others who had done so much for the entertainment of the Association.

A recess was here taken.

At the afternoon's meeting Secretary Smith reported that the roll-call showed that twenty-nine houses were represented either in person or by proxy, and it was also stated that ten or fifteen more firms were represented in the city. The fact that stock taking is going on in many of the southern Hardware houses accounts for most of the absences. Letters were received from most of these expressing regret at their inability to be present.

He also announced that he had retired from the Hardware business to engage in another line, and therefore tendered his resignation of the office of secretary. He desired to express his sincere thanks to all the members for the complete and efficient co-operation he had always received, which had made the performance of his duties a pleasure rather than a task. He asked that his resignation be at once accepted, as his health would not permit him to act longer at the existing convention.

President Langstaff expressed the sentiments of all the members in acknowledging the very efficient manner in which Mr. Smith had performed his duties, and asked the pleasure of the meeting as to whether Mr. Smith should continue till the regular election or whether a secretary pro tem. should be appointed.

Mr. Mandlebaum, of Little Rock, suggested that it would be best for Mr. Smith to continue in the performance of his duties with the aid of a stenographer, who had been employed for the purpose, but the convention voted to accede to Mr. Smith's request and Mr. J. J. Mandlebaum was elected secretary pro tem. to serve until the regular election.

The president announced that the meeting was now open for the transaction of such business as members desired to bring before it. He had suggested subjects for papers and discussions to the members and waited for results, so that a programme be arranged for the remaining sessions.

E. W. Gathright read a paper upon dating bills ahead, with reference also to the time given upon goods, and the charges for boxing and carting. Remarks were made by W. E. Gibbons touching a grievance committee. Other discussions and routine business occupied the remainder of the session. At 5 P.M. the meeting adjourned to meet at 10 A.M. on Wednesday in the parlors of the Galt House.

The evening was spent by the members and their guests in pleasant drives about the city and suburbs. Thirty-five carriages were in line, and a stop was made at the Boulevard Club House for refreshments.

Wednesday was given to the discussion of Association business. It was thought best that less publicity should be given to these gatherings than has been the case heretofore. It was decided that a number of amendments to the constitution were necessary, and after full discussion of the matter the document was changed in various respects, and is now as follows:

THE AMENDED CONSTITUTION.

ARTICLE 1.—NAME.

This Association shall be known as the Southern Hardware Jobbers' Association.

ARTICLE 2.—OBJECTS.

The objects of this Association are:

Section 1. A permanent organization of the Hardware jobbers of the South, for the purpose of promoting more intimate social relation among them, and consequently a more friendly feeling.

Section 2. To encourage and promote the commercial interest of the Hardware jobbers of the South in every way possible.

Section 3. To foster and encourage, through social intercourse and united efforts, that which will inure to our mutual benefit.

ARTICLE 3.—MEMBERSHIP.

Section 1. The members of the Association shall be composed of wholesale Hardware firms doing business in the Southern States.

Section 2. Any firm or corporation whose main business is the selling of Hardware at wholesale, and whose sales as jobbers shall amount to at least $100,000 per annum, upon application to the secretary in writing and a four-fifths vote of the Executive Committee, may become a member of this Association upon subscribing to the constitution and by-laws and payment of $10 membership fee in advance, and agreeing to pay annual dues of $30 within 30 days after each annual meeting.

Section 3. In the event of any member ceasing to do a jobbing business it shall be deemed a cause for dropping his name from the roll of this membership.

ARTICLE 4.—OFFICERS.

Section 1. The officers of the Association shall be a president, two vice-presidents, secretary-treasurer and an Executive Committee of four. The president shall be an *ex-officio* member and chairman of the committee. The Executive Committee and officers shall hold their offices for one year, or until their successors shall be elected, and all shall serve without compensation, except secretary-treasurer, the amount of whose compensation and bond shall be fixed by the Executive Committee.

Section 2. In case any office shall become vacant by reason of death or otherwise, the Executive Committee shall have power to fill the unexpired time.

Section 3. All officers excepting the secretary-treasurer shall be elected by ballot at the regular annual meeting, each firm or corporation member of this Association shall be entitled to one vote only, and the candidate who shall receive the majority of votes cast shall be duly elected. The secretary-treasurer shall be appointed by the Executive Committee, and need not necessarily be a member of the Association, and shall be required to give bond from indemnity company for the faithful performance of his duties.

ARTICLE 5.—DUTIES OF OFFICERS.

Section 1. It shall be the duty of the president to preside over all meetings of the Association and of the Executive Committee, and generally to exercise the functions of a presiding officer.

Section 2. It shall be the duty of the vice-presidents to act in the absence of the president in the usual order.

Section 3. It shall be the duty of the secretary-treasurer to keep a record of all meetings, to attend to and keep all correspondence of the Association, to collect all moneys due the Association, and disburse the same as instructed by the president and Executive Committee, and such other work as may be provided by the Executive Committee.

ARTICLE 6.

The Executive Committee shall meet at least once in every six months, or upon call of the president, and three shall be necessary to transact business at such place as the majority of the committee may elect, the expense attendant upon such meetings, ex-

Digitized by Google

cept the annual meeting, to be borne by the Association. It shall be its duty to perform such duties from time to time as may be necessary for carrying out the spirit and intent for which the Association was organized. It shall have charge of the disbursement of all funds of the Association, elect the secretary-treasurer, and fix his salary and bond, and have power to engage such other employees as may be necessary to carry on the work of the Association, and, if necessary, make assessments pro rata not to exceed $10 for each member, to defray the legitimate expenses of the Association. The reports of all committees shall be referred to it before the same shall be presented to the Association.

ARTICLE 7.

Any member may delegate, in case of unavoidable absence, a representative, who shall be a member of said firm or corporation, to represent them at any meeting, who shall present written credentials of the firm or corporation he represents. His vote shall be binding.

ARTICLE 8.

The annual meeting of the Association shall be held on a date set by the Executive Committee at such a place as shall be named by resolution at the last previous meeting; but the same may be changed by the Executive Committee in the event of an emergency warranting such change. Notices of such change shall be sent to each member at least 30 days previous to the meeting. Special meetings may be called by the president upon written request or not less than ten members. Notices of same shall be sent to each member at least 15 days previous to the meeting. A majority of the members attending shall constitute a quorum for the transaction of business.

ARTICLE 9.

The following standing committees, of three members each, shall be appointed by the president to serve for one year, or until their successors are appointed, subject to the approval of a majority of the Executive Committee: Manufacturers' Committee, Transportation Committee, Grievance Committee.

ARTICLE 10.

The order of business at each annual meeting shall be:

1. Roll call of members.
2. Reading of minutes of last meeting.
3. President's address.
4. Report of Secretary-Treasurer.
5. Reports of committees.
6. Miscellaneous business.
7. Nomination of officers.
8. Election of officers.

ARTICLE 11.

Any member desiring to withdraw from the Association shall give notice to the secretary at least 30 days prior to the annual meeting.

ARTICLE 12.

Any amendment or alteration of this constitution and by-laws may be made at any regular or special meeting by a vote of two-thirds of all members present and voting.

ELECTION OF OFFICERS.

The following officers were elected for the ensuing year: President; John S. Brown, Knoxville, Tenn.; First Vice-President: J. D. Moore, Birmingham, Ala.; Second Vice-President: Charles H. Watkins, Richmond, Va.; Executive Committee: President John S. Brown; J. J. Mandlebaum, Little Rock, Ark.; W. E. Gibbens, Knoxville, Tenn.; Geo. A. King, Atlanta, Ga.; Charles H. Ireland, Greensboro, N. C.

It was decided that the meeting of 1896 should be held at Chattanooga, the date to be determined hereafter.

Wednesday evening was spent in an enjoyable trip upon the river aboard the steamer *W. C. Hite*. F. F. Gilmore was master of ceremonies, and the details of the entertainment were arranged by him. About 325 people were aboard the boat, and they were given a delightful outing. Kurkamp's full orchestra was on board, and to the delightful strains of "Dixie," "My Old Kentucky Home," and other familiar strains the guests partook of the sumptuous refreshments that were provided, Cigars, punch and ices of every description, with champagne, made the occasion most enjoyable.

A DAY IN A CAVE.

Thursday was devoted to a trip to the Mammoth Cave, the Louisville & Nashville Railroad Co. having generously tendered a special train for the conveyance of the Association to the wonderful place. The reporter of the *Courier-Journal* has so graphically and entertainingly described the events of the day that we are tempted to make use of his report in full:

The Southern Hardware jobbers wanted to take Mammoth Cave home with them. They literally took possession of everything in the neighborhood, and from their deportment implied that they would like to go still further and include the L. & N. railroad in their list of wants. In every respect they had everything moveable, and that, too, without even the trouble of asking.

Mr. T. J. Fernley was the autocrat of the feasting table, and Lord High Nearly Everything Else. He is from Philadelphia, but was not so sober in his demeanor as the proverbial lawyers of the Quaker City. His strong point is in his speech-making propensities, comprising a faculty to say funny things. He was called on for a speech as soon as the visitors reached the cave. With his eyes fastened on a nail about four feet above his head on the wall of the platform he advanced steadily and with a sudden fling stuck his hat on it. Then he gazed at the crowd, evoked a laugh and began. He stated that he was unprepared for a speech. "If I had only known, I might have composed one in advance," and he reached into his pocket and pulled out some manuscript, which he indicated to be a typewritten address, but which by the man near him was seen to be only a price list. He fingered it nervously, as though to find the place, and suddenly pitched his voice to duplicate the average fire-eating orator. "I feel very much like the man who delivered the oration upon the completion of the great structure of Mammoth Cave, in the year, I think, 1835. Everybody in this State—what State is this?—had looked forward to the event with great longing. The Governor was the speaker. He was an illiterate man, having been brought up in the Hardware business. He had prepared a fine oration. 'Ladies and gentlemen and fellow-citizens,' said he," Mr. Fernley paused and showed how the Governor had forgotten his speech. "'Ladies and gentlemen and fellow-citizens,' he began again. After the Governor had started about a dozen times he finally managed to wrench out, 'Ladies and gentlemen and fellow-citizens: Forty years ago this land was a howling wilderness—and damn it, I wish it was still.'" Mr. Fernley continued to refer to the price list for information, and by the time he had finished everyone was so weak from laughter that an adjournment had to be taken to the dining-room.

The crowd, which numbered about three hundred, plunged into the cave at two o'clock, taking a combination route, which comprised the best parts of the long and short routes.

They came to the point called the "Methodist church."

"This," called out the guide, "is the Methodist church."

"Why don't you call it the Baptist church?" put in some one.

"Because it's too dry."

The laugh was on the crowd.

When Star Chamber was reached, Miss Margaret Muldoon, upon special request, sang several solos, which greatly enhanced the grand effect. The entire crowd was musical, and at Echo River all joined in a grand chorus in the singing of "Nearer, My God to Thee." One or two who were purely disinterested pronounced this very fine.

At one time one member of the party felt faint and a call was made for some relief. "Has anybody any whisky?" cried the guide.

"Yes-s-s," echoed through the cave, and everybody laughed. Some one said something or other about it being Kentucky.

"Fat Man's Misery" came near being the Waterloo of several men. Groans, sighs and rivers of perspiration fol-

Digitized by Google

lowed swift and fast. The guide stood at the end of the tight passage, and whenever a corpulent man reached the large chamber safely he told them this was "Great Relief." Then there was applause. Every fat man, indeed, who made a safe exit was a hero and was loudly applauded. Mr. Fernley was one of these. "Speech! speech!" called a cruel voice, but Mr. Fernley had not strength enough to respond. He at once sought a big rock and sat down and rested.

The final and greatest test was the "Corkscrew." No one is willing to say he was vanquished, though he has a higher opinion of himself to-day than he had last week. "I can climb the Alps," said one, "after this." "This is the dryest corkscrew I ever saw," remarked one old Kentuckian.

When the trip was over everybody was pleased; everybody had a great time and praised the L. & N. for its courtesy. The Association as a body passed resolutions thanking the road. The manufacturers present passed, by a unanimous vote, the following resolutions:

We, the undersigned, representing manufacturers and shippers, wish to express to the L. & N. Railroad our appreciation of the kindness shown us as guests of the Southern Hardware Jobbers' Association in permitting us to enjoy this most delightful excursion to the famous Mammoth Cave. This courtesy, so considerate and munificent, is gratefully acknowledged.

We also desire to congratulate the management of the road upon its elegant appointments and the completeness of its arrangements for the comfort and safety of its patrons, the excellent condition of the road in all departments as well as to facilities for the expeditious handling of freight. In view of these evidences of enterprise and efficient direction we can readily understand the prosperity and popularity of the road.

Resolutions were also adopted with a great hurrah thanking ex-President Langstaff, of Memphis, and ex-Secretary W. P. Smith, of Knoxville, showing in strongest terms the value of their services. Mr. Langstaff made a short address acknowledging the compliment, putting in several witty allusions. Short addresses were also made by Mr. Rockwell, of New York, and Mr. Ireland and Mr. Gibbens.

Many women were along, including prominent Louisville society girls, and they joined in the expression of thanks. Mr. E. G. Johnson represented the L. & N. in looking after things, and the fine manner in which he did it, and the appreciation of the visitors were vented in three rousing cheers in his honor.

THE MEETING A SUCCESS.

The resident correspondent of HARDWARE at Louisville writes the following comment:

"We believe this meeting has proved a success, and we rejoice that such has been the case, for trade associations of this kind prove very useful in abolishing, or at least diminishing, objectionable business methods, and it is only by meeting one another in the spirit that should actuate honorable competitors, presenting their views frankly and fairly, and discussing measures temperately, that objectionable features may be eliminated, and with them the jealousy and mistrust that frequently exist between friends and neighbors in the same line of business. Nothing inimical to the trade at large is fostered in associations of this kind; on the contrary we think that in abolishing abuses and improving methods they form a school where even the most experienced may learn something of value. The Southern Association is composed of brainy, well-equipped men, and should be congratulated on its success thus far in accomplishing the ends for which it was formed."

CREDITS AND THEIR APPLICATION.

An interesting paper upon "Credits and their Application," was prepared by N. A. Gladding for presentation at the meeting of the Association, and is here given in full:

Mr. President and Gentlemen: The subject of "Credits and their Application" has been more thoroughly reviewed and discussed within the past twelve months than ever before. The panic of 1893, with the great number of failures attendant upon same, in all departments of trade seems to have been the means, to a large extent, of arousing the greatest possible interest among the credit men of manufacturing and jobbing concerns in the matter, causing them to carefully investigate the causes leading up to these failures and to prepare ways and means of guarding against being caught in the future.

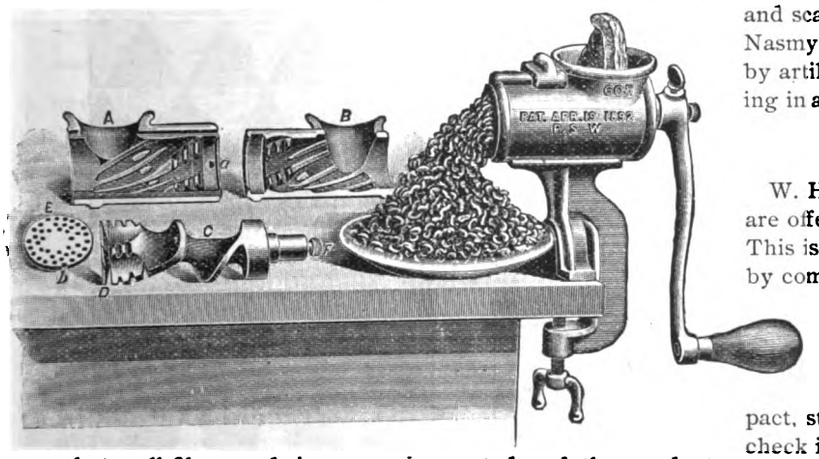
If you have been reading the papers offered at various business men's conventions and the contributions of credit men to the different journals, on this all important subject, you have seen what an almost exhaustive discussion it has received.

The great question is how have we and how are we profiting by all this? Has the discussion and investigation into credit methods been of any benefit? I am sure it has been to many of us. We would think little of ourselves or of others if no improvement was shown. It is plainly to be hoped that more conservatism is exercised in the giving of credit, in that much more care is being exercised along the lines of the debtor character, experience, record, etc., of which we spoke last year. The system of blanks recommended to this association at its last meeting has been put in use by some and found to be very beneficial in ascertaining the standing of would-be customers, and it has been my good fortune to be in correspondence with credit men in other parts of the country from whose system of blanks I have been able to obtain valuable points.

Credits is a subject that is always new, yet always old. There are certain principles to be applied year in and year out according to location and circumstances. Experience is the one great teacher, and yet after we think we know just how to do it, losses will still be made. It has been gratifying to myself to know that the past year's business resulted in a smaller percentage of loss than the previous year, and I believe that it can be reduced to a minimum by careful application of the lessons learned from the past and from study of the subject.

Besides the blank for inquiry regarding character, etc., sent to other houses, I believe it is a great help to the collection department to have statements properly worded, and they should be sent promptly each month to each customer. Each statement should give date draft will be made for account due unless remittance is duly received. Notice should also be sent to customers where drafts are sent to hand, and if no returns are received within ten or twelve days another final notice should be sent. Notices of notes should be mailed customers, as often bank notices do not reach them in time. No advertising matter should be enclosed with statement, as it is very liable to injure the effect of the demand for payment. Keeping posted as to your customer's condition is one of the most vital points for the credit man to observe. It is useless to give a claim to an attorney for collection after the debtor is covered up by mortgage or judgments. That is like locking the barn door after the horse is stolen. Keep posted; don't let the customers get in too deep. Know that your man is good and collect promptly; that's the meat in the cocoanut.

If your customer don't pay reasonably prompt quit selling him. Failures and losses would be fewer if creditors were more stringent. The trouble is that creditors are dishonest to themselves or untrue, if you prefer the word, afraid the customer will get mad and trade elsewhere if made to pay prompt. Let him go. Your business will be better off at the end of the year and the other fellow's worse. I am fully aware that policy is a good thing in its place—but we have too much of it in granting credit, but more particularly in matter of collections. How long, oh, Lord! how long will it continue?



When the manufacturers and jobbers in their credit departments are true to themselves, they will be willing to be

Digitized by Google

true to each other, and there will be a credit men's club in every city among jobbers in general, and the Southern Hardware Jobbers' Association will have blanks prepared by which they can post each other throughout the city as to who are good, bad and indifferent among the Hardware trade of the South.

New Triumph Meat Cutter.

The illustration given herewith represents the New Triumph Meat Cutter, a meat-chopping machine, entirely new and just put upon the market by the Peck, Stow & Wilcox Co., No. 27 Chambers Street, New York, for the autumn trade of 1895. The appearance of this cutter is nearly the same as the Triumph Meat Cutter, made by the same firm, but its construction is entirely different. This machine "is the result of many experiments and most critical tests. The simplicity of its construction recommends it for general use. It is most readily taken apart and as easily put together. The cutters now in use only cut the meat between the perforated plate and the knives. By examining the construction of this machine, the teeth or cutters will be seen, as shown in the illustration, on the feed screw C. That is, the meat is cut in small pieces before it reaches the knife and perforated plate. After it passes through the feed screw it comes in contact with the perforated plate E and is cut into minute particles by the revolving knife D." The manufacturers state that so perfect is its cutting capacity

that "all fibres and sinews are separated and the product of the machine is clean and neat in appearance and in small globular particles. By actual experiment with the small size cutter—the No. 605—with power applied thereto, it cut 39 pounds of meat in less than ten minutes, showing its cutting capacity to be very large. There are only five parts of the machine to be cleaned, and the clamp need not be removed from the table, as the shell or case of the cutter is easily taken from the clamp; the handle can be removed and the parts shown in the illustration, designated as A, B, C, D and E, are the only ones to be cleaned. It is of such construction that an ignorant person cannot make a mistake in replacing the parts in their proper places. The pressure of the cutting knife D against the plate E is regulated by the screw shown in the illustration, where the crank is fastened on to the feed screw. The simple turning of this gauge screw, which passes entirely through the feed screw, presses the knife against the perforated plate. The only thing to be observed in the working of the machine is to keep the knife pressed closely against the plate E."

The makers say that it "is a complete and perfect machine; a combination of the best qualities of the best cutters. It will cut faster, easier and better than any other machine yet put upon the market of the same size. Its double cutting capacity, alluded to above, renders it very desirable for family use. The stuffer attachment can be readily applied to the machine, which is securely fastened and cannot be easily removed when properly adjusted to the machine. It will not work loose in operating the cutter. The manufacturers have put upon this machine a low price, intending it for family use, so that it will come within the reach of all. These machines are nicely tinned both on the inside and outside, and present a most attractive appearance." It is made in two sizes and three styles. Nos. 605 and 610 are with clamps, as shown in the illustration; No. 612, a larger size, is the same as the 610, except it is arranged to screw on to the table instead of fastening by a clamp. The machine is adapted to hotel, family or butchers' use; not liable to get out of order and is a machine of the highest grade and quality.

Sowing Tree Seed With a Cannon.

Alexander Nasmyth, the celebrated English landscape painter, was a man fruitful in expedients. The Duke of Athol consulted him as to some improvements which he desired to make in his woodland scenery near Dunkeld. Among other things, a certain rocky crag needed to be planted with trees, to relieve the grim barrenness of its appearance. The question was how to do it, as it was impossible for any man to climb the crag, in order to set seed or plants in the clefts of the rock. A happy idea occurred to Nasmyth. Having observed in front of the castle a pair of small cannon, it occurred to him to turn them to account. A number of tin canisters were filled with all sorts of suitable tree seeds. The cannon were loaded and the canisters were fired against the high face of the rock. They burst and scattered the seed in all directions. Some years after Nasmyth was delighted to find that his scheme of planting by artillery had proved successful; the trees were flourishing in all the recesses of the cliff.—*World's Progress.*

Royal Door Spring and Check.

W. H. Quinn & Co., No. 103 Chambers Street, New York, are offering the trade the Royal Door Spring and Check, This is a new device for closing doors and checking them by compressed air instead of liquids. The points of superiority claimed for these springs are as follows: "Easiest attachment; does not require a skilled mechanic to put them on; doors open easily; no liquids to freeze up or leak; easy adjustment, compact, strong, durable, and at a price much lower than any check in the market." These springs are manufactured by John Toler Sons & Co., Newark, N. J.

At the annual meeting of the stockholders of the Chattanooga Hardware Co., the following directors were elected: A. M. Johnson, R. K. Carter, J. W. Cavender, J. N. Johnson and J. L. Davies. The board organized by electing A. M. Johnson, president; J. N. Johnson, vice-president; J. L. Davies secretary-treasurer and general manager; R. K. Carter, New York and Pittsburg representative.

The French cutlers established in the town of Langres are determined to call attention by every means in their power to the absurdity of the superstition about presents of knives "cutting friendship." They have therefore begged the French Minister of Public Works, M. Dupuy-Dutemps, to accept a little present of two fancy knives and a pocket-knife of fine workmanship.

Henry C. Weber & Co., Nos. 121, 123 and 125 Woodward avenue, Detroit, Mich., one of the largest retail Hardware houses in Michigan, will shortly remove to a large and commodious building opposite their present quarters. The removal is made necessary by their constantly increasing business. The firm has occupied the present premises for thirty-five years.

The report made by the U. S. Geological Survey places the coal output of the United States for 1894 at 170,853,085, valued at $186,154,604.

Christman Combined Shutter Lock and Bower.

The Wrightsville Hardware Co., Wrightsville, Pa., are placing on the market the Christman Combined Shutter Lock and Bower. The manufacturers state "that in offering the new Shutter Lock and Bower to the trade and to builders of the country we do so with the fullest confidence that we are offering an article which, for convenience, durability and handsome appearance, is superior to any article of the kind now in the market. It is entirely free from all objectionable features found in other combined locks and bowers and is less liable to get out of order than even the plain or common bolt now in use." The bowing arrangement is exceedingly simple and does not in the least interfere with the free movement of the bolt in the operation of locking or unlocking the shutter. It is further stated "that unlike other locks and bowers the finger piece is made solid with the bolt, and no fitting together and riveting on of the parts is done after they are galvanized or japanned, leaving every part fully covered and thereby preventing the forming of unsightly rust stains beneath the lock on the shutter."

Interlocking Rubber Tiling.

An entirely new and valuable use of vulcanized rubber is seen in the manufacture of rubber tiling for floors, halls, passageways, etc., etc., illustrated in the accompanying engravings. The material is a close imitation in appearance of the regular earthen or composition tiling, and a vastly superior article in many respects.

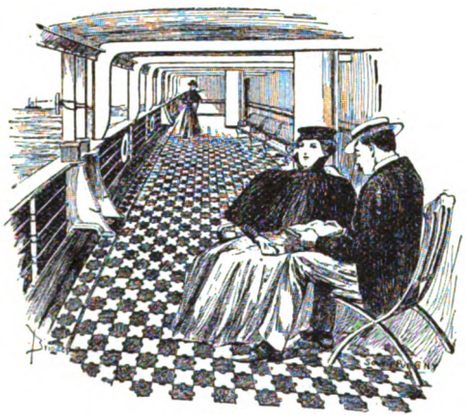

FIG. 1.

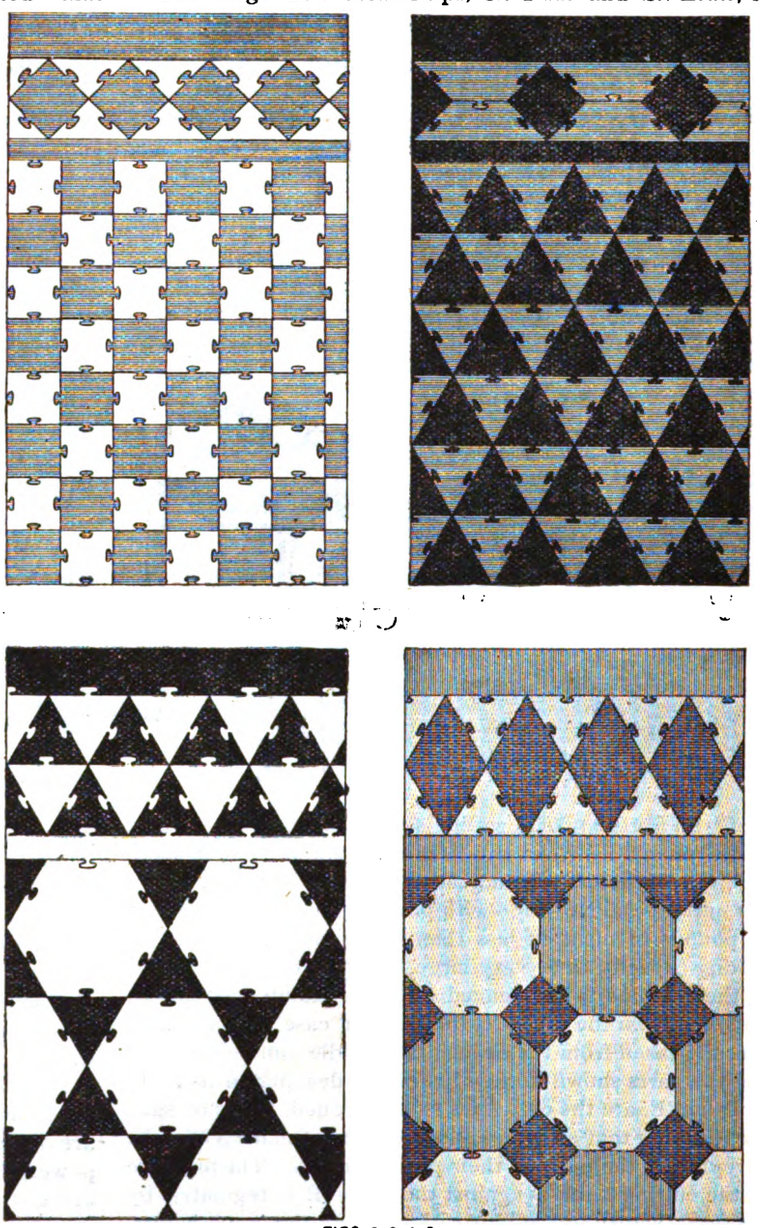
The New York Belting & Packing Co., Ltd., No. 15 Park Row, New York, are the sole manufacturers under letters patent, and from the favorable manner in which the new style of tiling has already been received, anticipate its general adoption in places where there is any danger in consequence of slipping or falling, where there is much traffic or wherever noise is objectionable.



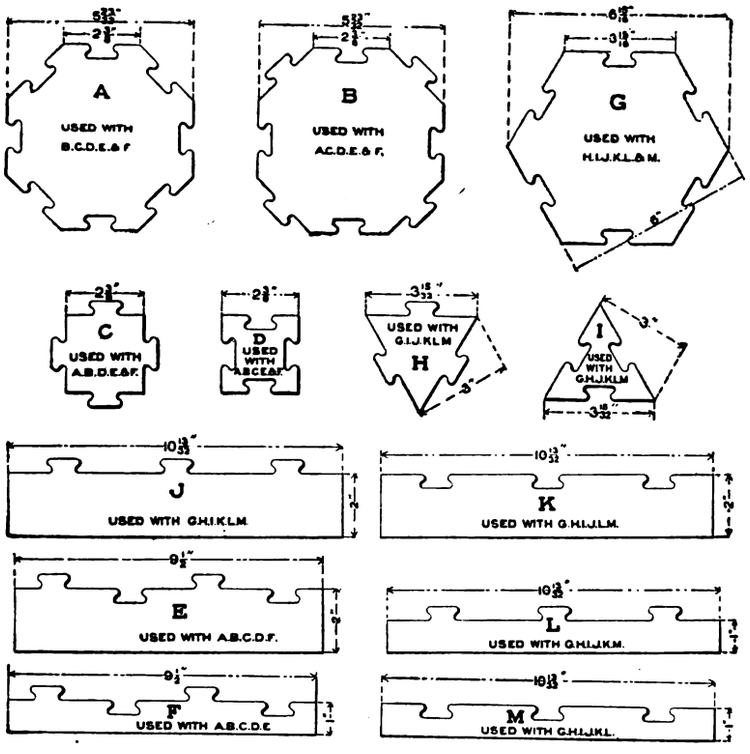
Rubber tiling is furnished in different patterns, varying in size, shape and color, which by various combinations admit of being worked into a variety of designs, producing most pleasing and beautiful effects. Some results are shown in Figs. 2, 3, 4 and 5. The effect of these as printed here in but one color, is only partially brought out.

Because of its elastic nature this tiling yields readily to vibration, and adapts itself to any unevenness and inequalities of floors upon which it is used, and the interlocking feature binds it together in such a manner as to prevent opening at joints, uniting the whole as in one solid piece. Its durability is admitted by all to be greater than that of composition or earthen tiling. Beside, it will not crack, break or scale, and its many other peculiar and desirable qualities make it in the end cheaper.

An advantage which suggests itself is the apparent ease with which this material may be repaired, in case of its becoming worn in situations where subject to excessive wear. For steamships, depots, public landings and buildings generally, bath rooms, hotel corridors, and places of amusement, etc., this rubber tiling appears to be especially well adapted.

At the Broad Street station in Philadelphia, Pa., where the traffic is unusually heavy, it has been in use for about a year, and as yet shows no signs of wear, while after each washing or scouring it presents the appearance of having been newly laid. A total of 1250 square feet is employed.

The large new steamships, *St. Paul* and *St. Louis*, recently built by the Cramp Co. for the International Navigation Co., have been largely laid with this tiling. In its application to the *St. Louis* an extremely serviceable floor covering has been secured while contributing not a little in a decorative way to the interior beauty of the vessel. The saloon deck, second cabin, pantries, etc., are all laid with this tiling, the design shown in Fig. 2 being employed and laid in two colors, red and white. The effect is extremely pleasing, and a total of 3500 square feet are used. This is distributed aboard the vessel as follows: Saloon deck, 2000 feet; second cabin, 1000 feet; pantries, 500 feet.



FIGS. 2, 3, 4, 5.

The quality of being noiseless when trodden upon shows

Digitized by Google

up to good advantage in such situations, and is especially noticeable in this instance.

A handsomely gotten up catalogue. containing a number of colored plates with much interesting data regarding this

new style of tiling is furnished free by the New York Belting & Packing Co., Ltd., upon application.

A Bid for the Zimmerman-Johnson Race.

The following are copies of telegrams to A. A. Zimmerman and T. W. Eck from Prince Wells and the Fountain Ferry Cycle and Athletic Association:

LOUISVILLE, KY., June 20, 1895.

A. A. Zimmerman, Freehold, N. J.: Will give one thousand dollar purse for one of the match races between Zimmerman and Johnson to be run at Fountain Ferry Track, July 4th, in connection with Prince Wells' Cycle Derby. Answer. PRINCE WELLS,

and

THE FOUNTAIN FERRY CYCLE AND ATHLETIC ASSOCIATION.

LOUISVILLE, KY., June 20, 1895.

T. W. Eck, care Philadelphia *Inquirer*, Philadelphia, Pa.: Will give one thousand dollar purse for one of the match races between Zimmerman and Johnson to be run at Fountain Ferry Track, July 4th, in connection with Prince Wells' Cycle Derby. Answer. PRINCE WELLS,

and

THE FOUNTAIN FERRY CYCLE AND ATHLETIC ASSOCIATION.

Prince Wells is to be congratulated if he can secure one of the races between these great riders, as it will add great interest to his "Cycle Derby." Such enterprise deserves to succeed. Prince Wells is certainly up-to-date.

Good Cheer and Good Sense from the South.

J. D. Moore, of the Moore & Bindley Hardware Co., wholesale Hardware, Birmingham, Ala., in conversation with a reporter of HARDWARE concerning business in the South, said: "Business is good in this section. Comparing the periods of January to June, 1894, and January to June, 1895, our sales have increased 40 per cent., which we think is a better showing than the country as a whole can make. Our people are more hopeful and crops are good; consequently we anticipate a good fall trade. Our people are buying only to cover their legitimate wants. We trust this policy will be pursued and thus not raise unwarranted expectations, which would help to break the market later on."

Review of the Markets.

There is a steady increase in all departments of trade, without the feverish features which are present in mere "booms." This is the kind that remains and is of value to the whole country. A great corn crop is promised. The railroads report increased business. Increases of wages by manufacturers are of daily occurrence. Europe is again in the market for our stocks and bonds. Money is abundant and cheap for legitimate enterprises.

Hardware: There are still a few dealers who give conservative estimates of the condition of the trade, but the majority pronounce it as unquestionably good. The tendency in all lines affected by the increased cost of material, is to stiffen up. This is most notable in the case of Nails, Nuts and Bolts and Hinges. Jobbers and retailers are buying with less reserve, and a good many of the orders booked are of the stocking up character. There is a good demand for Builders' Hardware. Bicycles still remain in the front rank, the demand being undiminished. It is the same way with nearly all the makes, *i. e.*, the demand being ahead of the supply. Shelf and Heavy Hardware are also moving freely.

Cutlery: The import trade is still very quiet. In domestic lines, however, there is a fair demand and business seems to hold its own fairly well.

Locks: The market shows an improvement over what it has been recently, there being an increased demand. There is, however, no change in prices.

Hinges: There is the usual demand for Hinges. Jobbers and retailers are buying at the new prices without complaint.

Nuts and Bolts: At a recent meeting of the Bolt & Nut Manufacturers' Association, held in Cleveland, and to which we referred in a previous issue of HARDWARE, it was decided to make a 10 per cent. advance in prices, to take effect on July 1st. Practically, however, an advance of about 7½ per cent. is in force now, the jobbers forestalling the Association somewhat. The price of material going up caused the manufacturers to advance their prices.

Tacks: The demand continues fair, and the market may be said to be in better shape than it has been for some time. Prices remain unchanged.

Wire Nails: There is no change in the price of Wire Nails, the quotations being $1.20 base, Pittsburg, car-load lots on dock, New York, $1.35; out of store, $1.55. Mills have all the orders that can possibly be handled during June, and a price has not been fixed for July, though it is confidently expected that the price will be advanced 10 cents per keg. Manufacturers claim that they have no stocks or they could sell in advance of the Association prices now. Some express the idea that as soon as the supply exceeds or equals the demand, the upward tendency will be checked, the trouble now existing is that the demand by far exceeds the supply. The present condition of affairs seems to suit all hands, as there is more money in the business for all, from the man who draws the rods, to the man who markets the nails.

Cut Nails: The same conditions that exist in regard to Wire Nails will apply to Cut Nails. Prices remain the same. Car-load lots on dock, $1.30; out of store, $1.35.

Clapp & Co., bankers and brokers, New York, in their weekly financial letter say: "The motto on the silver dollar is being emphasized by the courageous men of field, factory and finance. Political and commercial pessimists offer their stock of woes and difficulties to a people too busy making money to hear or heed. The ripening harvest begins to call for the few who still stand idle in the market place. The mineral production in the United States in 1894 is valued at $553,352,996. The *Census Bulletin* says

Digitized by Google

47.95 per cent. of all persons in the United States in 1890 over 10 years old were earning their own living. Nearly five times as many men as women were at work. It is estimated the silver owned and coined in the United States Treasury equals 1527 cords. One million dollars in gold weigh about two tons; one million silver dollars weigh nearly 30 tons. Andrew Carnegie is reported claiming the country at large does not realize the boom which has started in the industrial world. That iron and steel mills all over the country have contracted their full capacity for several months ahead, and many are actually unable to take additional orders. That since the bulk of their contracts were booked, there has been an advance of 50 cents in pig iron. This fall consumers will find they cannot place orders. The country is on the threshold of the biggest revolution in business it has ever experienced, and it is not a long way off."

White Lead, dry or in oil; Red Lead, and Litharge in kegs: In lots of less than 500 pounds, 6 cents net; in lots of 500 pounds and over, 5½ cents. Zinc: Present quotations, 3¾@4¼ cents for jobbing parcels, as to quantity and quality. Putty: The market is firm at $1.45@$2.25, as to quantity and style of packing. Linseed Oil: The quotations are for raw in barrels, 57 cents per gallon; boiled in barrels, 60 cents per gallon.

The prices quoted below are for small lots. Round lots, except Tobin Bronze, can be purchased at lower prices:

THE CLEVELAND TRADE.

In looking back over the past two weeks we find that there is nothing in the situation to discourage, but rather everything to encourage. The advances in prices which have been made are supported by public sentiment, and it is therefore safe to predict that they are permanent; indeed, we find many who believe that a still further advance will come before long.

Seasonable goods continue to move in large quantities, and all staple goods are in active demand from those who desire to purchase before another advance.

The prospects for fall are excellent, and if nothing occurs to injure the crops we will undoubtedly see a very decided improvement in business from the first of August on.

THE PHILADELPHIA TRADE.

It is pleasing to report that, although the season is very late and the usual midsummer dullness should now make its appearance, trade is still keeping up to an unusual extent, and while prices are still advancing they have by no means reached the limit.

The phenomenal demand for bicycles shows few signs of dropping off, and we are so far behind on orders that we dread the sight of a telegram. A few days ago, when there seemed to be a temporary lull, we were rash enough to send out some postals stating that we had a small stock; this has brought us such a deluge of orders that we are more than ever behind. The bicycle craze of 1895 will (unless it is eclipsed by that of 1896) be long remembered as a most remarkable trade episode; indications, however, point to a still larger demand next year, as the popularity of bicycling seems to be deservedly on the increase.

The advances in the prices of Hardware are still maintained, and as most of them have been very moderate, dealers are usually very willing to pay a small advance which is asked.

Wire Nails are very firm and higher prices are promised for next month, and while the advance in Wire Nails is apparently heavy it is more than justified by the advance in raw material.

Billets have advanced fully $5 per ton and Rods some $6 to $7 per ton. The advance in raw material in turn is caused by the advance in labor, coke, etc., so that the higher prices seem to rest on a sure foundation, and it may reasonably be expected that the low prices which have prevailed for the past two years are to be succeeded by a period when values will be nearer the just figure, manufacturers and dealers alike will be able to realize a living, and like the prophets of old we say:

"Hasten the day!"

BIDDLE HARDWARE CO.

THE BOSTON TRADE.

There seems to prevail through the Hardware trade a more cheerful feeling than has been noticed for the past five years. Orders are coming in freely, and retailers seem to be impressed with the fact that the low prices which have prevailed can no longer continue, and are anticipating their future wants to a limited degree.

Reports from factories, cities and towns throughout New England show that labor is more generally employed than last year, and an increase in wages which has already been made and is likely to follow, must necessarily increase the purchasing power to that extent that we feel assured that the outlook for autumn business is very promising.

Staple goods are advancing, as right they should, and we welcome any legitimate change in this direction, and only hope that manufacturers will act judiciously, and prevent disastrous consequences that always follow a commercial boom.

FRYE, PHIPPS & CO.

THE ST. LOUIS TRADE.

We can truly say that the Hardware business of our city has kept up remarkably well during this month, owing in some measure to the advance made in prices by the manufacturers of all lines of staple goods, and also on account of depleted stocks in the hands of the country merchant. Abundant rains have fallen during the last three weeks in St. Louis territory, which assures good crops in all sections. In Texas, Arkansas, Mississippi, Kansas, Nebraska, Missouri and all Western States the outlook for future business is good. Prices are firm. Some lines of Hardware are scarce and a better feeling seems to be the sentiment along the whole line.

A. F. SHAPLEIGH HARDWARE CO.

THE MINNEAPOLIS TRADE.

The business outlook in the Northwest shows a decided improvement. Jobbers are quite busy, country orders coming in freely. The recent advance in iron, nails, barbed wire, etc., seems to meet with universal favor, even with people who buy for consumption, all appreciating the fact that prices have been too low, and the advance shows indication of a revival of business. May the good work go on, but not be overdone.

The writer, upon his return home from a short trip East, had the pleasure of taking a daylight trip covering a portion of the distance between Chicago and this city. There was a marked contrast between the condition of the crops here and further east. Reports from all parts of the Northwest show the same favorable condition. Plenty of rain in all sections. Good growing weather. The country could not look more beautiful than it does at present, and with wheat 75 to 80 cents per bushel, should these conditions continue until after harvest, the Northwest will be in con-

My dear, dear Lord,
The purest treasure mortal times afford
Is spotless reputation---That away
And wheels may be painted iron or gilded clay;
An honest cycle that has stood the test,
Is the famous one with the Humber crest·
In quality is its fame; both grow in one;
Take quality from it and its fame is gone.

HUMBERS have been the favorite Bicycles of two generations of riders. They are still the - - STANDARD.

Humber & Co., America, Ltd.,
No. 318 Broadway,
New York.

dition to purchase large quantities of merchandise and pay up back interest on mortgages held in the East and do considerable towards reducing them.

Building operations in the Twin Cities are not extensive, but quite an improvement on last year. It is a little early yet for us to expect much in this line. Labor, as a rule, is quite well employed. The city is expending a large sum of money on a reservoir and filter, and a new dam across the river a short distance below St. Anthony Falls also employs a great many men.

The saw mills are running in full blast, the greater part of them day and night.

The new dam referred to will give us about 10,000 horse power, an increase of about 50 per cent. It is proposed to utilize this by electricity, and probably the power for the street car system for the two cities will be supplied.

There has been no particular change in the local Hardware situation, dealers generally reporting a little improvement in business, but believe that the Fall will show still further gain, all being willing to pay higher prices on goods and anxious to do business for a while on the advancing market.

W. K. MORISON & CO.

The Marlin Fire Arms Co., New Haven, Conn., are distributing a neat and handsome pack of playing cards. These are sent, as in the past, on the receipt of fifteen cents in stamps or coin, and distributed to their customers with goods. A significant feature is found on the front cover of the package, where a hand of four aces is found, accompanied by this explanation: "This is the way a man feels behind a Marlin Rifle. He knows he is safe and all the game in sight is his."

The Forehand Arms Co., Worcester, Mass., have presented the Worcester Sportsmen's Club with a handsome silver trophy, to be shot for by the members of that club.

The PUTNAM Hot-Forged and Hammer-Pointed Horse NAILS

Are made in Sizes and Styles as below:

TURF NAILS, Nos. 1 to 5

FRENCH HEADS, for punched shoes without creases, Nos. 3 to 7.

REGULAR HEADS, Nos. 5 to 14.

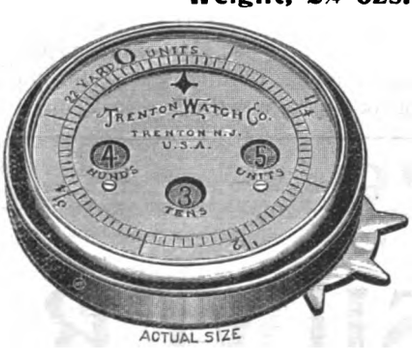
CITY HEADS, for shallow creased shoes, Nos. 5 to 9.

COUNTER HEADS, or FROST NAILS, Nos. 5 to 9.

Prices of these styles are the same as for Regular Heads of the same size.

The **only** Horseshoe nails in the world made precisely the same as the old-fashioned, hand process, being exclusively **Hot Forged and Hammer-Pointed.** This **hammering** (not pressing, rolling or shearing) while the metal is at welding heat blends all the particles into a compact, firm nail that outwears all others and will **Never Split, Sliver or Break.** *They are not sheared but have smooth edges clear to the point.*

The attempts of other manufacturers, in their advertising, to identify their product with the Putnam Nail leads us to state that the PUTNAM NAIL is made SOLELY by us in the ONLY RATIONAL WAY a GOOD horsenail can be produced.



Nickel-plated Mascot Ring for 10 Cents in Stamps or Silver.

The Trenton Watch Co., Trenton, N. J., whose new Cyclometer is illustrated upon page 32 of this issue, state that they have received many strong expressions of approval regarding it, and that although they have been filling orders for but a short time, many have been already duplicated. They add: "We recently ran one in the machine shop, with star wheel chucked up in lathe, 130,000 miles, at the rate of a mile in four seconds, and the same distance backward at the rate of a mile in three and a half seconds, and upon examination could find no perceptible wear. We have also been testing them by making them register on rapidly running lathe, at the rate of a mile in two seconds, and have even speeded them at the rate of a mile in one second, but at this terrific rate they got hot, although we have had none break under the test." The attention of the trade is called to their special announcement upon page 48 of this issue.

Notice of a ten per cent. increase in wages has been given in the works of the National Malleable Castings Co., Cleveland, Ohio. The action was voluntarily on the part of the company, and was taken because of the improvement in business. The Eberhard Mfg. Co. took similar action. The Eberhard Co. employ 1100 men and the National Co. 900.

BICYCLE TRADE RECORD.

Bicycle manufacturers and dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Companies, Stores, Etc.

Akron, Ohio.—A company is being organized, with a capital stock of $75,000, for the manufacture of bicycles.

Albion, Mich.—Roy Wiley and others are interested in the establishment of a bicycle factory. A company is being organized for this purpose.

Alexandria, Va.—The Brott Electric Bicycle Co. has amended its charter, changing its name to the Brott Rapid Transit Co., and increasing its capital stock.

Araville, N. D.—Carvel & Stevens are opening new Hardware store, and will take up bicycles, if inducements are offered by bicycle manufacturers.

Charleston, S. C.—The Marshall & Westcoat Co., incorporated with Julius J. Westcoat, president; John B. McManee, vice-president; J. T. Humphreys, treasurer; J. R. Tobias, secretary, to engage in the Hardware business. The company has a capital stock of $100,000, and will take up bicycles.

Collinsville, Ill.—Kirschbaum Hardware Co., incorporated with a capital stock of $5000, and will take up bicycles.

Forestville, Conn.—E. D. Rockwell has purchased machine shops, and will probably convey the property to the Liberty Light Co., which has recently been organized, and which company will manufacture bicycles.

Hubbard, Iowa. — Chilson & Fannon, Hardware, bicycles, etc., new firm organized to succeed to the business of the Hubbard Hardware store.

Kaukauna, Wis. — Butler & Guessenheimer, bicycles, have commenced business, having been appointed agents for the Waverley.

Lafayette, Ind.—R. L. Jaquey, books and stationery, has added a bicycle department, handling the Spalding wheel.

Ligonier, Ind.—Steps are being taken looking to the establishment of a bicycle agency. A bonus of $1500 has been raised for this purpose.

Little Falls, N. Y.—Snyder & Fisher, knitting manufacturers, will change their plant into a bicycle factory. They expect to get into operation by the fall, and will give employment to seventy-five operatives. They will manufacture a high grade wheel.

Louisville, Ky.—W. W. Knofel, manager for the Western Cycle Exchange, has been appointed agent for the Monarch, Chicago Special and Defiance bicycles, and has opened for business at No. 131 West Market Street.

Maplewood, Mass.—Fernald & Bliss, bicycles, have opened new store in the Maplewood block.

Medford, Wis. — F. R. Zeit, bicycles, commenced business, handling the Crawford and the Andrae.

Milwaukee, Wis.—Philip Gross & Son, bicycles, have commenced business, handling the Eagle Altiar.

Minneapolis, Minn. — The Minneapolis Cycling Co. has been incorporated by Geo. H. Gillette, C. D. Bates and others, with a capital stock of $100,000.

Mobile, Ala. — Arnbrecht & Patterson, bicycles, new firm commenced business, handling the Spalding, Outing, Union and Ontario bicycles.

New York, N. Y.—The United Cycle Co. has been incorporated, with a capital stock of $10,000, the directors being J. B. Pendleton and J. J. Douglass, of New York City, and M. L. Ohr, of Brooklyn.

Norfolk, Neb. — John Friday, bicycles, will open a new store.

Norway, Mich. — F. C. Cole, bicyclist, commenced business, having the exclusive agency for the Crescent Wheel.

Pettisville, Ore.— Conrad Mohr, implements, bicycles, etc., opened a new store.

Pittsfield, Mass.—L. L. Atwood will commence the manufacture of bicycles shortly. He will have some of the parts manufactured in England; all of the enameling, plating and machine work being done in Pittsfield.

Racine, Wis. — Spencer Hall and others are reported to be organizing a company, with a capital stock of $50,000, to manufacture a newly patented bicycle, the plant of which is owned by Mr. Hall.

Richmond, Ind.—M. C. Henley, manufacturer of roller skates and other sporting goods, contemplates going into the manufacture of high grade bicycles. The present factory will be thoroughly equipped with all the modern appliances for the manufacture of bicycles, and every arrangement is being perfected, by means of which the output of wheels from the start will be extensive.

San Jose, Cal.—San Jose Hardware Co. has been organized, with a capital stock of $25,000, and will inaugurate a bicycle department.

San Sabre, Tex.—Grey & Withite is a new firm composed of T. M. Grey and J. M. Withite, who will conduct a general Hardware, sporting goods and bicycle business.

Sioux Falls, S. D.—Steps are being taken, looking to the organization of a company for the manufacture of bicycles.

St. Louis, Mo.—A number of local capitalists are organizing a company, with a capital stock of $50,000, to establish a bicycle manufacturing plant.

Terre Haute, Ind.—Macauley Bros., stationers, have opened a bicycle department, and report business satisfactory.

Toronto, Can.—The Massey-Harris Hardware Co., limited, manufacturers of agricultural implements, have decided to engage extensively in the manufacture of bicycles, and are erecting for this purpose a five-story factory building, which will be equipped to turn out between 5000 and 10,000 wheels per annum. They will manufacture a high grade wheel. The same company have had under consideration for some time past the erection of a branch factory in the United States, but have deferred this matter for the present, owing to the serious illness of the president of the company. The subject is to be again taken up as soon as he recovers.

Union City, Ind.—A company is being organized, with a capital stock of $40,000, for the manufacture of bicycles.

Washington, D. C.—G. N. Cross, No. 610 Thirteenth Street, N. W., is organizing a company to manufacture an improved bicycle lock, which has received the commendation of many prominent bicycle men. The important feature about it is that it is fastened to one of the bars of the bicycle, and does not have to be carried in the pocket, as with other bicycle locks. Mr. Cross is preparing to place a small quantity of stock in the new company. The lock will probably sell for $1.

Washington, D. C. — Central Bicycle Store has commenced business at No. 402 Fifth Street, N. W.

Changes and Removals.

Fairview, Ark.—W. C. Horton, Hardware, bicycles, etc., has been succeeded by Newton & Co.

Fort Bragg, Cal.—George A. Johnson, bicycles, reported as having sold out.

Lamoni, Iowa.—Thomas Teale & Son, Hardware, has been succeeded by the Lamoni Hardware Co., with which W. Reese is also interested. The reorganized concern will take up bicycles.

San Diego, Cal.—C. H. Edwards, bicycles, has been succeeded by a new firm under the name of Tibbals, Hannahs & Cobb.

New Goods and Improvements.

Gas City, Ind.—J. R. West is introducing the Universal Tire Setter.

Indianapolis, Ind.—The Hay & Willits Mfg. Co., who manufacture the Outing Bicycle, have moved into larger quarters, at No. 76 North Pennsylvania Street.

New York, N. Y.—The Anglo-American Cycle Fittings Co. have removed their business to No. 105 Chambers Street, where they occupy the entire fourth floor. This company have just put on the market a new celluloid tipped cork handle in white, black and imitation tortoise shell.

Correspondence Solicited.

Decatur, Ala. — William Tucker, Hardware, bicycles, etc., has commenced business, and invites correspondence from manufacturers of bicycles and bicycle sundries, looking to accepting agency.

Finchford, Iowa.—C. H. Stears, of Janesville, Wis., is preparing to open a new bicycle store. Propositions from bicycle manufacturers solicited.

Philadelphia, Pa.—Party who does not desire to be known, desires correspondence with manufacturers of high grade bicycles wishing to establish an agency in Philadelphia. He may be addressed as N., 295, care of Philadelphia *Press*. This party has a fine store on one of the principal streets, and enjoys a first-class trade.

Miscellaneous.

Bridgeport, Conn.—Bridgeport Cycle Co. announce that one of the partners will retire from business, and is offering to sell a half interest in the company, which has been established five years. The plant is well equipped, and has a repair shop with all requisite power.

THE ROYAL DOOR CHECK AND SPRING.

The Latest, Cheapest, Best.

Patented, Sept. 11, 1894.

Simple, Compact, Strong, Durable.

The ***Royal*** has a ***compressed air check.*** No liquids to freeze up or leak. Doors open easily. No back suction. Easiest attachment. Does not require a skilled mechanic to put them on. Improved ratchet for increasing tension on spring. Will fit right or left-hand doors.

PRICE-LIST:

		BRONZED.
No. 1, for Light Screen Doors	each,	$1.40
No. 2, for Medium Inside Doors	"	3.30
No. 3, for Large Inside or Small Store Doors	"	4.30
No. 4, for Large Store or Vestibule Doors	"	5.60
No. 5, for Extra Large Doors	"	7.00

Packed One Dozen in a Case. Write for Trade Discounts

DIRECTIONS.

Place the shoe (S) in an upright position on the door, about six inches from back and flush with the top; *fasten securely;* slide the check into the shoe until the lugs (B) fit solid, then put in the end-screw (D). Bring arm (L) down to the transom-rail till it rests firmly, then put in the screws and the spring is ready for adjustment.

HOW TO ADJUST IT.

The thumb-screw (E) regulates the air check. A very slight turn changes the result. If the door slams, tighten it up. If it checks too soon, loosen it. It should check about three inches from the closing. If the spring is weak, increase the tension by turning up the ratchet-wheel (C) one cog. Care should be taken that the spring is not made too strong. If the spring swings the door easily, it is strong enough. Regulate the closing by the screw (E). In case that the transom-rail has a raised moulding, shorten the arm (R) by changing it into the next hole. Also, in putting the arm on the pintle, see that it is *securely fastened* and *rigid.* The checks are reversible for right or left-hand doors by simply changing the arms from one side of the pintle to the other. Follow the above directions, and the spring will give good satisfaction.

WOOD MANTELS.

PERSISTENT

Enterprising people are beginning to learn the value of advertising the year round. The persistency of those who are not intimidated by the cry of "dull times," but keep their names ever before the public, will surely place them on the right side in the end. Think over the persistent advertisers you know.

Just What Every Manufacturer Wants!

The Reference Book

OF THE

Hardware and Kindred Trades of the United States and Canada.

THE Book contains, in the most condensed and convenient form possible, the Names and Ratings of all firms in the following Trades in the United States and Canada:

Hardware Dealers.
Dealers in Sporting Goods, Bicycles, Firearms, &c.
Agricultural Implement Dealers.
Stove Dealers.

Sent (Postpaid) on Receipt of

TWO DOLLARS.

CERTAIN marks are printed after each name, showing the line or lines of goods handled.

The work is complete, condensed and convenient, and will be found especially desirable in sending circulars, on account of the street numbers. The ratings enable the user to select names of any specified rating or over that may be desired.

In cities the lists are classified—Hardware dealers all in one condensed list, Stove dealers in another, etc. In most cases, in the Hardware list, are specified the special kind of Hardware handled, as Shelf Hardware, Cutlery, etc.

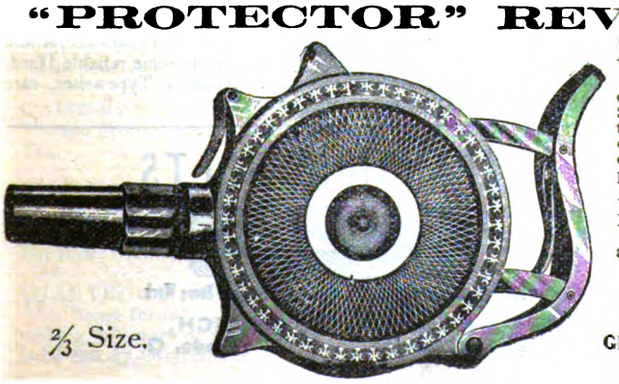
BEST AND CHEAPEST
STONE WATER FILTER
ON THE MARKET.
Tripoli Stone Block System.



Set up ready for use. There are two crocks, each of four gallons capacity—an upper one holding the Filter Block, and the lower one, which can be used as a water cooler if desired. This Block is four inches in diameter by the same in height, and is hollowed out on inside. This fits on a metal tube, which fastens by means of a nut to bottom of Filter Jar. Block can be lifted off tube, cleaned and replaced in two minutes, and with no trouble at all. Water passes from outside of block, through the walls, into the hollow chamber, and from thence, by the means of the Drip Tube, into the lower receptacle.

The Finest Piece of Salt Glazed Stoneware Ever Offered the Public.

F. H. WEEKS - AKRON, OHIO.

"PROTECTOR" REVOLVER.

MERIDEN, CONN., U. S. A.

The Conroy patented New Automatic Refrigerator Door Fastener, with lock and key.

THIS FASTENER is the most complete one ever invented The door will push to more easily with this Fastener than any in the market. The Fastener will tighten the door by the door closing. It is the most substantial; nothing about it to get out of order By lifting the handle quarter circle the door will open, and if it sticks it will release it. It has a new and improved lock, absolutely secure. Made for flush or raised doors, composed of brass or bronze metal in any finish desired, plain or ornamental.

Emery AND Corundum Wheels.

The Chicago Rolling Ladder

Especially Adapted for Hardware Stores.

THE CHICAGO ROLLING LADDER.

The first requisite for a store ladder is **ease of operation.** The Chicago is the only ladder of the style shown above that does work easily. If you would save one-half your labor, fit your store up with either the **Chicago** or **Bicycle Step Ladder** system. Write for Catalogue illustrating our 4 distinct ladder systems to

STANLEY'S PATENT Roofing Bracket.

STANLEY
Rule & Level Co.
New Britain, Conn.

SOLD BY ALL HARDWARE DEALERS.

The parts are of Spring Steel, firmly riveted together. Push the beveled ends up under two layers of shingles, already nailed down; the Bracket has two separate bearings on the roof, and is so formed that any increase of pressure from above, increases its stability.

One dozen per minute can be placed in position, or removed; and great economy in lumber and nails will be found. There are no loose parts to get lost; and no nail-holes are made in the roof. In constant use these Brackets will last a life-time.

No. 1. Roofing Brackets, 8 inch, ½ dozen in box. Per Doz., $3.00

NOTICE.

GENTLEMEN:—On and after March 1st, the business heretofore conducted by me will be continued by a Company, to be known as

The Estey Wire Works Company.

Thanking you for favors received in the past, I bespeak a continuance of your patronage under the new organization and trust that the same pleasant relations existing between us may be continued.

Yours truly,
W. S. ESTEY.

As above announced we have succeeded to the business of W. S. ESTEY, and trust that we will merit a continuance of your valued orders as heretofore extended to Mr. W. S. Estey.

Yours truly,
ESTEY WIRE WORKS COMPANY
March 1, 1895. 65 Fulton St., New York.

ORANGE SPORTING POWDER, MANUFACTURED BY LAFLIN & RAND POWDER CO.

ORANGE RIFLE EXTRA, ORANGE SPECIAL, ORANGE DUCKING, ORANGE LIGHTNING.

The attention of TRAP AND FIELD SHOOTERS, RIFLEMEN AND DEALERS IN GUNPOWDER, is called to the new ORANGE SPORTING POWDER, patented April 17th, 1888, and branded ORANGE RIFLE EXTRA.

This Powder is quick and strong, and burns with such perfect combustion that the only residum left in the barrel after shooting is a dark oily substance easily removed While this Powder is not exactly SMOKELESS, it gives only a light bluish smoke, which is almost instantly dissipated, and interferes but little with the shooting of the second barrel, taking the place of the so called smokeless powders in this respect.

This brand of powder sells at the same price as any other brand of Rifle Powder and is superior to any made. No person who shoots can afford not to give it a trial, as after once trying it he will never use any other Powder when he can obtain the ORANGE EXTRA. Weight and quality guaranteed.

MILITARY, MINING AND BLASTING POWDER.

LAFLIN & RAND POWDER CO., - 99 Cedar Street, New York City.

PLACE THE MATTER CLEARLY.

To make a man realize an idea as you realize it, is what is necessary to make him understand his needs. Advertisements should aim to place a matter so clearly before the public that they see it as clearly as the advertiser does.

Digitized by Google

IT TAKES A PULL

to separate the plies of our rubber belting. A yoke of oxen can do it, but hard service won't, so strong is the friction. Our belting is uniform in width and thickness, consequently more of its surface comes in contact with a pulley. That means

NO WASTE OF POWER.

Rubber belting is never injured by water, hence it is best for out-door use, for wet localities, and for mills where the atmosphere is surcharged with moisture or steam, as in paper mills, tanneries, etc. Buy the durable kind, branded 1846-Para, Double Diamond or Carbon, made for 50 years by the

The PUTNAM Hot-Forged and Hammer-Pointed Horse NAILS

Are made in Sizes and Styles as below:

TURF NAILS, Nos. 1 to 5.

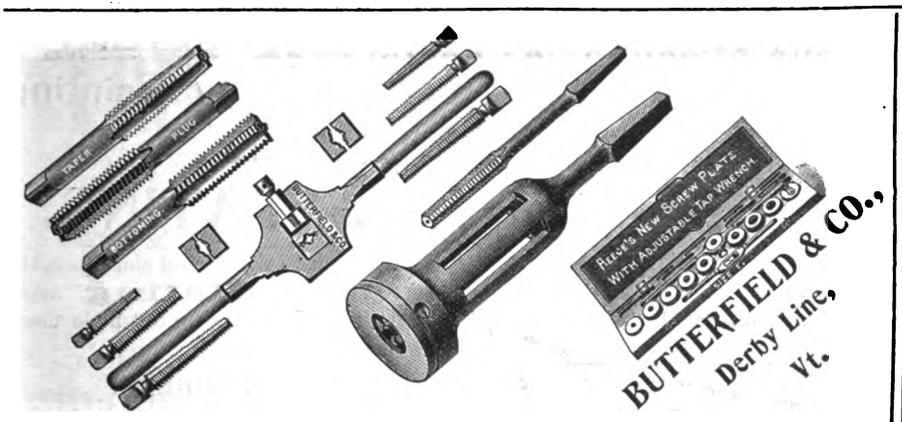
FRENCH HEADS, for punched shoes without creases, Nos. 3 to 7.

REGULAR HEADS, Nos. 5 to 14.

CITY HEADS, for shallow creased shoes, Nos. 5 to 9.

COUNTER HEADS, or FROST NAILS, Nos. 5 to 9.

Prices of these styles are the same as for Regular Heads of the same size.



The **only** Horseshoe nails in the world made precisely the same as the old-fashioned, hand process, being exclusively **Hot Forged and Hammer-Pointed.** This **hammering** (not pressing, rolling or shearing) while the metal is at welding heat blends all the particles into a compact, firm nail that outwears all others and will **Never Split, Sliver or Break.** *They are not sheared but have smooth edges clear to the point.*

The attempts of other manufacturers, in their advertising, to identify their product with the Putnam Nail leads us to state that the PUTNAM NAIL is made SOLELY by us in the ONLY RATIONAL WAY a GOOD horsenail can be produced.

Nickel-plated Mascot Ring for 10 Cents in Stamps or Silver.

BLACKBOARDS

Are now ready for Painting,

AND THERE IS BUT ONE ARTICLE WITH WHICH TO PRODUCE A SATISFACTORY RESULT, AND THAT IS

THE LAWRENCE BLACKBOARD SLATING.

This slating will not glaze, scale or blister when properly applied. The great fault with other liquid slatings is that they produce either too smooth or too rough a surface. **The Lawrence Slating** avoids both faults and produces a slightly rough yet black surface, that can easily be written on, which takes up but little chalk, and from which erasures are easily made.

CIRCULARS AND PRICE LISTS ON APPLICATION TO THE MANUFACTURERS.

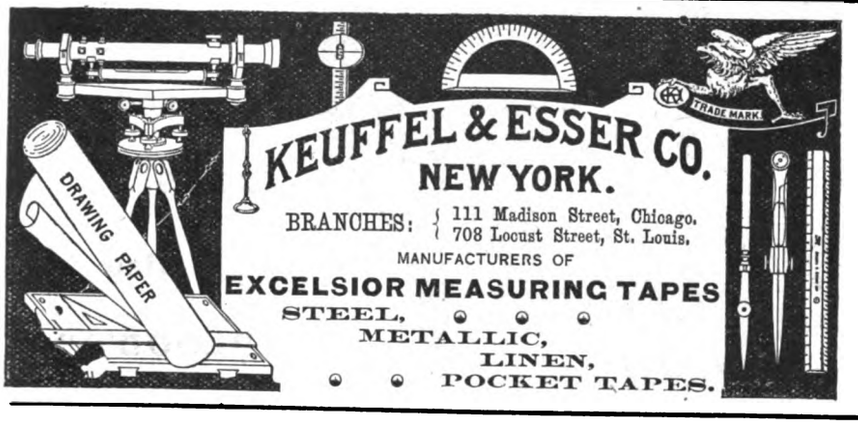
American Lead Pencil Co.,

429 Broome Street, New York.
110 Cheapside, London, England.



113. "CARBON" PENCIL.

TO obviate that tired feeling and dull pain in the fingers, which invariably accompany the use of the ordinary black lead pencil whenever too much pressure is brought to bear or it is used any length of time, and at the same time to produce an article that is very smooth, very black and very firm, thus adapting it for all kinds of work where a fine, smooth, black and legible mark is required, this pencil cannot be too highly commended. For writing on soft paper t surpasses anything heretofore produced; and for sketching, draughting and heavy shading it is indispensable.

Dozen mailed on receipt of 50 cents. **Samples, Catalogue, Information upon Application. Address**

SCALES, PLUMB-BOBS, THUMBTACKS, &c.

The AMERICAN WICK is made on scientific principles. The gum inherent in the natural cotton is taken out, and no expense is spared to produce a wick that will give THE **GREATEST ILLUMINATION.**

THE
AMERICAN WICK
Made by the
WICK DEPARTMENT
Of the STANDARD OIL CO. of NEW YORK.

Oil drawn up through the AMERICAN WICK burns with a large, clear, white light and the flame does not drop off in size as it does when a poor wick is used. When the cotton is clogged with its natural dust and gum the full illuminating power of the oil is not obtained and the complaint is heard that the light **DROPS.**

THE ORIGINAL IS THE BEST.

ROYAL CENTRAL DRAFT LAMP.

This Lamp has no Superior in the known world.

Gives the Largest Light for Wick Exposure of any Lamp made.

ROYAL LAMP.—No. 1013.

Chimney Lift and Wick Raising Device the best and easiest of adjustment. There are many imitations of these improvements, but the **ROYAL** is still the best.

The Royal Chimney. Lift will stay in position while lighting the lamp without support from the hands. This no other lift device will do.

The Wick Raising Device of the Royal Lamp is unquestionably the best, and has the approval of our largest competitors by their practical adoption of it.

The Wick can be adjusted more accurately and more easily than by any other device.

Workmanship, Style and Finish are unsurpassed. Made in all finishes of Stand, Table and Banquet Lamp. No better lamp for the dealer to handle.

The "Alligator Wrenches are forged solid in one piece, with tempered steel jaws They have ratchet teeth *cut diagonally* across one jaw, thus enabling them to bite with three teeth at once.
The "Curtis" Wrenches have the diagonally cut teeth of the "Alligator" on both jaws acting in opposite directions. The jaws are connected by swinging bolt and swinging link which gives a quick, sure grip. These Wrenches can be used in contracted space where no other wrench can.

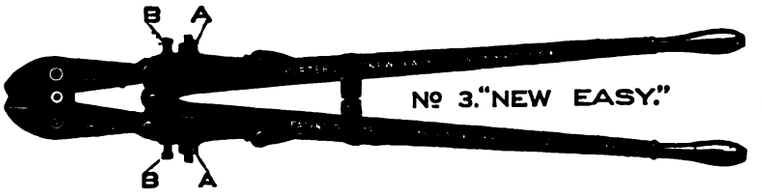
OHIO KNOCK-DOWN STOVE PIPE.

THE Ohio Stove Pipe is the only practicable, durable Smoke Proof Knock-Down Stove Pipe made that needs no directions for putting it together. The Ohio Stove Pipe's peculiar construction enables any person to easily put it together or take it apart. A number of the Ohio Stove Pipe Joints put together will make a continuous line (46 ft. long if desired) of perfectly firm, smoke-tight pipe that will not collapse.

The Ohio Stove Pipe is always shipped in crates of 25 joints of the following sizse:

4 in....per crate. 5 in....per crate. 6 in....per crate. 7 in....per crate.
4½ in.... " 5½ in.... " 6½ in ... "



Ask your jobber for this stove pipe; if he does not keep the Ohio, write us.

"The Good Times Coming."

The signs of the times are propitious. The midsummer dullness, of course, has its effect upon the rising wave of prosperity, but conditions that count for anything indicate a general revival in all directions with the coming of fall. The wage market, which is perhaps the surest barometer, is moving in a suggestive manner. During a space of thirty days in June the record of increased wages for over two hundred and fifty thousand workmen was noted. A large share of the increase was in the line of iron manufacture—and an eminent authority has laid down the rule that iron is the best barometer we have of the conditions of American manufacture. Other lines have been likewise affected. There was an increase of wages among the coke makers in May. There have been general advances in the New England woolen and cotton mills. The leather workers have felt some benefit in the same direction. The significant fact noted in connection with these advances is that they are almost without exception made by employers without solicitation upon the part of their employees.

Many factories that were closed during the two years of depression, have been reopened. We hear of manufacturers being behind their orders in all directions. The retail dealers have faced empty shelves so long, that they have been glad upon the return of courage, to stock up; and rising prices have stimulated them very largely in this direction. The general public make no complaint at paying a little more for their commodities, as they have learned by sad experience that idle mills and depressed conditions of trade have an unpleasant reaction upon the prosperity of all.

Perhaps the most hopeful sign of any, is that this prosperous condition of affairs is not a spasmodic boom, which is to recede and leave conditions worse than they were before. It has been forced upon the country by the needs of the people, and each forward movement has been so cautiously made, that even the most doubting felt that it was the logical outcome of affairs.

The Great Wheel Harvest.

The present season will be forever memorable in the annals of the Bicycle business. It is certainly wonderful, that at a period when every other industry was slowly recovering from a partial paralysis of nearly two years' duration, this infant industry requiring the most expensive nourishment on the part of its devotees, should have reached the stalwart proportions it succeeded in developing, and at once become the standard of a successful career, which, beating the record for progress to-day, is the admiration and envy of the manufacturing world. And yet, no one identified with the distribution of its artistic product, can imagine for one moment that this wonderful business has reached the zenith of its development. It is estimated that last year (1894) over 200,000 wheels were manufactured by the different companies engaged in their production. This year, with greatly increased facilities and improved machinery, together with a large increase in the number of producers, the product will reach in the neighborhood of 400,000 wheels.

What it will be next year, can only be guessed at, as this year's business has been dwarfed and held in check, by a positive inability to supply the unparalleled demand for wheels of every description.

New factories contemplate entering this seductive business; additions are being built to old factories, almost equal to the original plant, stocked with the most intricate and "up-to-date" machinery, which before the ides of March, 1896, will begin to make an impression on the trade, that will carry the production to a possible 700,000. This, with every foreign country with an intelligent population already knocking at our doors for a share in this distribution (even in blocks of 500 to 1000 wheels at a time, from individual buyers), will, we prophesy, even with the grand total above suggested for a year's production, leave us in November, 1896, with few, if any, wheels to carry over into 1897.

The leaders in the business are strongly entrenched with well-earned additions to capital already large enough for successful production, and they are in it *to stay*. The high grade meritorious wheels of to-day will reap the harvest, and the garnered sheaves will represent judicious advertising and honest construction.

The readers of HARDWARE have taken a lively interest in the question asked in our last preceding issue, as to the meaning of the word "crowbar," as shown by their letters elsewhere. The space occupied is not wasted. Knowledge as to the origin of names is of value to those who make use of such names.

Digitized by Google

Why Called a "Crow-Bar"?

The inquiry contained in the last preceding issue of HARDWARE as to the origin and meaning of the word Crowbar as applied to a very useful and quite well-known implement, has called forth a number of responses, which we take pleasure in giving below. In addition to these, we may quote also from several parties who have volunteered information upon this subject. One writer believes that it is so called "because it originally had a device attached to it that resembled the beak of a crow," and quotes the old Franklin Fourth Reader as authority. Another refers to the days of Robinson Crusoe, and quotes that illustrious personage as declaring, "Oh, how I long for an iron crow!" One correspondent of the New York *Sun* gives the following explanation: "Some seventy-five years ago, before railroads had been built in New England, the stage coach was the conveyance between Hartford, Conn., and Providence, R. I. Some four and one-half miles above this city was then the Hyde Tavern, midway between the two cities, and a halt was made over night. In those days 'flip' was the drink, composed of hard cider and New England rum, and by heating a poker in the coals of the fireplace and plunging it in the liquid. The bartender was an old man, and had a pet crow who drank to excess whenever he could, and he was called the bar crow. He would also steal spoons and small things and make a hole in the ground to hide them, so finally he was called crowbar."

The above is certainly not well taken, as we find this article spoken of by Shakespeare in *Romeo and Juliet*. In Act V. we hear Friar Laurence giving an order to Friar John to "Go hence; get me an iron crow, and bring it straight unto my cell." Later when Romeo and Balthasar enter the churchyard for the purpose of opening the tomb of the Capulets, the former refers to the same instrument under another name, saying, "Give me that mattock and the wrenching-iron." Later the same article is referred to simply under the name of "crow," which is pretty good evidence that the instrument was one well-known in the days of Shakespeare.

The letters referred to are here given, and we shall be pleased to hear from anyone else who has light to throw upon the subject.

LIKE A CROW.

EDITOR HARDWARE: In answer to yours in issue of June 25th, "Why is a Crowbar called a Crowbar?" A Crowbar has a bar with a strong beak, like a Crow, is what I find in my dictionary. I am

Yours respectfully,

J. R. NUTTING.

Office Sickels, Preston & Nutting Co., Davenport, Iowa, June 27th.

LIKE A CROW'S FOOT.

EDITOR HARDWARE: I notice your inquiry "Why is a Crowbar called a Crowbar?" Webster says under the head of crow: "A bar of iron with a beak, crook or two claws used in raising heavy weight, drawing spoke, etc." I would suggest that the reason a Crowbar is called a Crowbar, is because it has a foot like a crow's foot. Crow from the Saxton, craw, etc. Yours very truly,

O. D. WRIGHT.

Oneida Community, Kenwood, N. Y., June 27th.

CROWDBAR, NOT CROWBAR.

EDITOR HARDWARE: In your issue of June 25th last, you ask: "Why called Crowbar?" Permit me to offer an explanation for the arbitrary use of the name. Somewhere back in the "fifty's" I remember reading an article in some paper, commenting on the mutilation of some words used in different trades to designate certain articles, as, for instance, 6-penny or 8-penny nails, etc., which originated from 6 pounds or 8 pounds per 100 nails. The same writer also called attention to the misuse of the term "Crowbar," which he claimed was originally called "Crowdbar," but for short drifted into the name of Crowbar, by dropping the letter "d." Respectfully yours,

A. Heitchen & Son, Anamosa, Iowa, June 27th. A. HEITCHEN.

A SHREWD "PERHAPS."

EDITOR HARDWARE: Perhaps (?) the "claw" on end of "Crowbar" may have been thought like a *crow's foot.*

Yours truly, KING HARDWARE CO.

Atlanta, Ga., June 27th.

WILL PASS FOR A "RINGER."

EDITOR HARDWARE: *Re* your article on Crowbar in current issue. This name was adopted because the action of the tool resembled the peculiar habit of the bird, crow, which is a well-known puller of things from the ground floor; also both are black, and become the brighter the more their particular faculty is exercised.

If this is the "ringer," say so in your next, and I'll tell you where I am, for I'd like to have a HARDWARE for my own. Yours truly, P. B. CHEEK.

New York, June 25th.

QUOTED FROM KNIGHT.

EDITOR HARDWARE: You will find in Knight's American Mechanical Dictionary as a definition of Crowbar: "An iron bar used as a lever; it had usually a bent end, which was frequently forked, and may have been named after its fancied resemblance to the beak of a crow." To me this seems as good a reason as any for it being called a "crow" bar. Yours, FRANK BRACELAND.

No. 3722 Filbert Street, Philadelphia, July 4th.

A GOOSEBERRY ILLUSTRATION.

EDITOR HARDWARE: Gooseberries, why? When Adam gave names to fruit, trees, berries, etc., Mother Eve bothered him with all kinds of questions, and finally as she showed him a new kind of berry, old Adam grew exasperated and simply said: "Gooseberry" (meaning or calling Eve "goose"), "can't you see it is a berry?"—Crowbar: finally she showed him a bar, and still exsperated, he answered, "Crow and find out," hence "Crowbar."

Cincinnati, Ohio. Yours, etc., MORRIS SACHS.

Allentown Hardware Works.

The Board of Directors of the Allentown Hardware Works, Allentown, Pa., in pursuance of a resolution passed at the annual meeting of the stockholders in January last, called a special meeting of the stockholders at the works on June 18th for the purpose of voting for or against a proposition to create a bonded debt of $30,000 and issue $20,000 preferred stock. The meeting was largely attended and the stockholders were well pleased with the management of the factory. The total number of votes polled was 1,021, of which 981 were for and 40 against the issue. The entire number of shares is 1,360.

H. P. Appleton, the present energetic superintendent, took charge of the works in July, 1894, and since then the company have been gradually increasing facilities, adding new lines of manufactures, taking new contracts and adding new help. Mr. Appleton, by his natural abilities and past experience, is admirably fitted for the work he has in hand. He was for twenty-six years superintendent of the Norwich Lock Mfg. Co., but resigned when they left Connecticut for the South, later going with them until they got started in the new field, but leaving them in August, 1892.

The Hardware and house-furnishing trades should avail themselves of the scheme that the Bissell Carpet Sweeper Co. will have ready very shortly, for the coming fall season. It has been the custom of this concern to issue some attractive form of offering to their trade for each season, something in the nature of a stimulant to increase sales on their line of sweepers, and it has each season had the result of further interesting the Hardware and house-furnishing trade in their line of goods.

OFFICERS OF THE SOUTHERN ASSOCIATION.

It is with pleasure that we herewith give the portraits of the president and first and second vice-presidents of the Southern Hardware Jobbers' Association. These gentlemen were elected at the recent meeting in Louisville, and something concerning their positions in the trade and record in the past will certainly be of interest. They constitute a body of officers who are certainly qualified in every respect

PRESIDENT JOHN S. BROWN.

to increase the usefulness and extend the influence of this great association of jobbers.

John S. Brown, the president, is the sole manager of the house of George Brown, dealer in Hardware, paints, agricultural implements, etc., in Knoxville, Tenn. He has never been connected with any other house. The business was established in 1869 by George Brown, father of the president of the association, who was a distinguished lawyer with a large practice, and who never gave the house his personal attention. From 1869 to 1881 only agricultural implements were handled. John S. Brown took charge of the house in 1879 on leaving school, and has been its manager ever since. George Brown died in 1891, and since then John S. Brown and his associates have owned the entire business. Mr. Brown is a very active and energetic man, and the record of the house of which he is head is the best evidence of his business ability. He has always been a believer in Hardware associations, and was largely instrumental in forming the local Hardware association in Knoxville, out of which the Southern Hardware Jobbers' Association grew. His personal qualities are of such character as to endear him to all that know him, and his popularity in the trade is best indicated by his unamious election to the important position to which he has just been called.

J. D. Moore, the first vice-president of the association, is president of the Moore & Handley Hardware Co., dealers in wholesale Hardware, Birmingham, Ala. He is a native of Georgia, was reared on a farm and was educated at Bowdon College, Georgia. He taught school for five years and then commenced a general merchandise business at Roanoke, Ala., in partnership with W. A. Handley, where he remained from January, 1876, to January, 1882, at which time he moved to Birmingham, Ala., and opened a machinery supply house under the firm name of Moore, Moore & Handley, his brother, B. F. Moore, being at that time admitted to partnership. Moore, Moore & Handley commenced with a small capital of $1,500, and carried a stock of machinery, with a small stock of Hardware. This being the period when Birmingham began to attract the attention of the outside world its population increased rapidly, and the business grew apace with the town. The firm continued the machinery and Hardware business until 1888, when it incorporated under the name of the Moore & Handley Hardware Co. J. D. Moore was elected president, W. A. Handley vice-president and B. F. Moore secretary and treasurer. These officers have continued as first elected to manage the business. The active control of the business fell to J. D. Moore and B. F. Moore, Mr. Handley being a non resident, and his connection was mainly that of a stockholder.

J. D. Moore came to this business without any former experience of the Hardware trade, and went to work to build up the business without a proper conception of how much there was to learn that he did not know. As is usual in such cases his courage was all the more, since he was unconscious of how much he had to learn. He started as bookkeeper, general manager, buyer and salesman without experienced help from whom he might gather useful knowledge, and the result was that it became necessary to be acquainted with all the details of the business and thus forced him to learn. In 1888, when the Moore & Handley

FIRST VICE-PRESIDENT J. D. MOORE.

Hardware Co. was incorporated with a full paid up capital of $100,000 and opened business, they went into the store of Moore, Moore & Handley, which of course is the property of the stockholders, and with other real estate which they have acquired makes a good showing for six years.

The Moore & Handley Hardware Co. now occupy 52,500 square feet floor space to store their stock of goods, have six traveling salesmen, cover the States of Alabama, North-

Digitized by Google

ern Florida, Western Georgia and Eastern Mississippi in the distribution of their stock.

Mr. Moore is a man of force and character, as his great success in a business way has well demonstrated.

Charles H. Watkins, the second vice-president, is president of the Watkins Hardware Co., importers and jobbers of Hardware at Richmond, Va. He is one of the youngest men in the Hardware business to-day as proprietor, and received his Hardware education in the old firm of Watkins,

SECOND VICE-PRESIDENT CHARLES H. WATKINS.

Cottrell & Co., with which firm he was connected some fifteen or sixteen years. This time was so admirably occupied that when he was prepared to go into business for himself he was equipped in all essential qualities for success. He inaugurated the Watkins Hardware Co. some five years ago, and its record from that time to this is the best possible guarantee of his business ability.

Bell's Wire Eave Trough Hanger.

Bell's Galvanized Wire Eave Trough Hanger, a cut and advertisement of which appear elsewhere in this issue, is said to be the first Wire Eave Trough Hanger made in this country. It was patented some ten years ago and placed upon the market and has steadily grown in favor with the trade. It is made of one piece of heavy steel wire, galvanized, and is constructed so as to form a brace to the trough and hold it in shape as well as in place. Its neatness, strength, the ease with which it can be put on the trough and fastened to the roof, as well as the low price at which it is sold, are some of the reasons for its popularity with the tinners of the United States; while the way in which they are bunched and the convenience with which they can be counted, handled and shipped have added to their popularity with the jobbing trade. They are made in nine sizes and are sold chiefly through the jobbing trade. A sample Hanger with circular and price list will be sent free upon application to the manufacturers, Jno. W. Bell & Co., Mercer, Pa.

The Naked Truth.

EDITOR HARDWARE: A postal card with this startling headline in large capital letters was recently circulated by a firm nearby, who are venders of one of the numerous brands of home-made tool steel. After extolling the virtues of the particular steel they desire to sell they proceed to coin a phrase which will be new and perhaps startling to those who buy imported tool steel. The sentence reads this way: "Mechanical Dudes who buy Imported Steel at high prices because 'It is English, you know,' should reform. It is as important to be good citizens as good mechanics, therefore be sure to buy Steel where its value will be produced by labor here and not sent to Europe, i. e., from," etc.

Mechanical Dude! Because forsooth he chooses to buy where he knows (perhaps by costly experience) he can procure a steel which will give best results. Ought a workman be called names because he does not buy this firm's goods? How cheap and thinly disguised is the motive which fixes the standard of good citizenship.

The card has a flavor of bad taste and selfishness which we rarely meet in these days of refinement and culture, and it is only paralleled by the issue several years ago of a postal card by the same parties entitled "A Solemn Fact," which was hideously grotesque. VOILA TOUT.

American Tool Chest Co.

The following announcement is of interest to the trade

Office and Salesroom, No. 200 West Houston Street,
NEW YORK, July 1, 1895.

Owing to a similarity of names of several corporations in the United States, and in order to identify the name of our company more closely to the nature of the business transacted, we have had the name changed in accordance with law, from American Tool Co., to that of

AMERICAN TOOL CHEST CO.,

under which name our corporation will hereafter be known; and with increased facilities for the manufacture of Tool Chests and the prompt filling of orders, we hope to merit a share of your business.

Yours respectfully,
AMERICAN TOOL CHEST CO.
John H. Patrick, President.

The Improvement in Oilers.

In the days of old, any kind of an oiler was considered good enough. With the demand for better bicycles has come the demand for better oilers, that would lessen the nuisance of dirty hands and greasy tool bags. The firm of Cushman & Denison have been making oilers since cycling was in its infancy and have vastly improved this article. The present "Perfect" Pocket Oiler is as far ahead of the old-time leaky oilers as the modern pneumatic safety is ahead of the old solid tired bone shaker. As oiling is the most disagreeable task of any cyclist, the "Perfect" Pocket Oiler deserves its popularity for having reduced this annoyance to a minimum.

New England Hardware Officers.

The following gentlemen were elected officers of the New England Iron & Hardware Association, at the annual stockholders' meeting, June 18th:

President: Albert M. Wiley, Frye, Phipps & Co.

Vice-President: J. K. Whipple, Fitz, Dana & Co.

Treasurer: Charles H. Breck, Joseph Breck & Sons Corporation.

Clerk: F. H. Butts, Butts & Ordway.

Directors: Leon C. Carter, Dana Hardware Co.; D. H. Bradlee, Bradlee, Hastings & Co.; H. C. Dodge, Dodge, Haley & Co.; T. H. Baldwin, Baldwin, Robbins & Co.

The Toledo Stove Co., Toledo, Ohio, are soon to erect a new factory on the site of their present structure. The new building will be five stories high and eighty by one hundred and sixty feet. It will cost $15,000.

CONFESSIONS OF AN UNSUCCESSFUL CLERK.--III.

My first afternoon with Samson & Crown was one of interested and wondering investigation. The senior partner, whose good sense and business ability were tinged with a pleasant vein of humor, sat down with me, and talked for a half hour upon the opportunities before me, and the things that it would be to my advantage to undertake or to avoid.

"Don't learn too fast, Henry," said he, "and let us older heads manage the store for the present. There is one boy I like a little less than the one who knows nothing, and that is the one who knows it all. Keep your eyes and ears open, and ask all the questions you wish of us here in the store, but don't do any talking on the outside. Look among the goods and learn all you can concerning them, but don't think you know all about them too soon. If you are waiting upon a customer, and are not certain as to price or quality, come to one of us and find out. Be sure your figures are right before your customer goes, and count over your change a dozen times if necessary, until you know it is correct. Treat all who come in with politeness. If any one angers or aggrivates you, keep silent, and come right to me. One feature of my department is to do all the swearing and jawing-back for the whole establishment."

Turning to a slim and pleasant young man, who was my senior by some two years, Mr. Samson said: "Almon, I turn this boy over to you. Teach him the cost and selling marks and instruct him in his present duties. Help him in all possible ways, and see that he does not learn too fast. We don't want his vital energies so exhausted in the first week, that he will feel permanently tired ever after."

(I thought to myself as he spoke: "Tired! I guess not. It must be the pleasantest kind of fun to work in a place this." I was longing to get back of the counter at once.)

The store of Samson & Crown was located upan Market Street, was of brick and consisted of three stories and a basement. The firm had been in business for a number of years, and held a steady, reliable trade, many customers coming from points from ten to twenty miles away. While dry goods comprised the bulk of their stock, they also handled furs, carpets; boots and shoes, hats and caps; took orders for men's clothing to be made up; and bought butter, eggs, dried apples, feathers, paper-rags, etc. In accordance with the custom of the time and place, they marked their goods at a fair price, and then took what they could get after haggling with the customer; charged a great deal upon the books, twenty-five per cent. of which was never collected; and paid for the produce above enumerated in trade.

They enjoyed the company of three employees, counting the youth who had just arrived. The head clerk, Smith Raymond by name, was a man of middle age and uncertain temper, who looked after the finances and kept the books. His associate, Almon Nichols, was a most excellent clerk, a student of books and of people; a pure, high-minded boy, whose influence and example upon me were ever of the most helpful and beneficent kind. His kindness during the time we were together, was of a most tender character, and the memory thereof has abided in my soul with pleasant fragrance through all these years.

Almon took me in hand, and revealed the mysteries of store-keeping, as seen from various points of view, from attic to cellar. Of the dried-apple and feather department upon the top floor, he said: "You will be immediately made full manager up here. I have had that honor for two years past."

My young heart glowed at the prospect of responsibility. "Will I stay up here and buy and sell these goods?" I asked.

"No. But you will come up about once in two weeks and pack them for shipment. It will take another day each week for the eggs, and about two for the butter. The paper-rags come on the list only when the buyer comes around, which is about once each month. Is your muscle pretty good?"

A somewhat brighter prospect was revealed me down in the store proper. We spent an hour in going over the stock, and locating the departments. My Mentor made a couple of diagrams, and asked me what they meant. The first one was like this:

H	I	J	K	L	M	N	O	P	Q
1	2	3	4	5	6	7	8	9	0

"Is it a game?" I asked.

"Don't make game of everything you don't understand, my boy. That's our cost mark. Look at the tags on these dress goods. Do you see that upper line?"

I did. It was: I O.

"Each letter on the top line stands for the figure underneath. The I O means that this piece of goods cost twenty-eight cents a yard. Now this is our selling mark:

S	E	T	F	O	R	G	A	I	N
1	2	3	4	5	6	7	8	9	0

"You see this mark on the upper line of the tag: F N? That means that this piece of goods, which cost twenty-eight cents per yard, is to be sold for forty—if we can get it."

Even in the silent watches of the night, I arose and studied these price marks. They were plastered all over the barn and schoolhouse at home, as these familiar scenes returned to me in my dreams; Samson and Crown and both clerks were at my elbow at various times between bed-time and dawn, shouting them into my ears. The rest of the time I was packing eggs, dried-apples and dress goods into a great butter tub.

There were other causes for dreaming. Almon had explained the arrangements that had been made for my board and lodging.

"You will take your meals with me at Mr. Samson's," he said, "and sleep in the store for its protection. Are you afraid to stay here alone?"

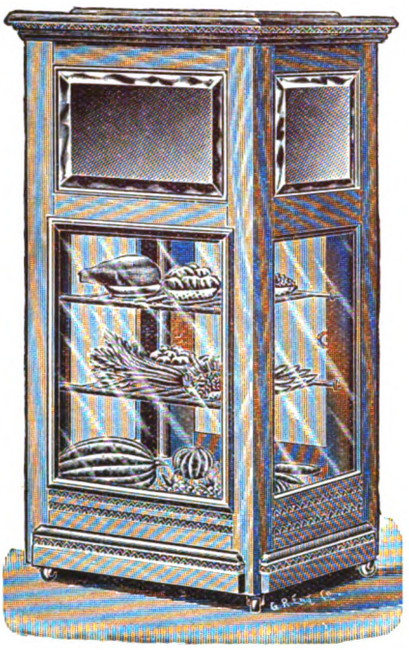
I could truthfully answer that I was not.

"Here's your bed."

He led me to a long, broad table at the further end of the store. It was used during the day for the display and sale of cotton cloth, several bolts of which were ever in evidence.

"Do I sleep on these?"

He showed me a feather bed, a pillow and some blankets in a box under the table. "You pull this out, pile them on the table, and there you are. Here's your gun," he added, producing from the drawer an ancient Colt's revolver, as long as his arm. "If a burglar tries to get in, just pull the trigger, and let him have it."



It struck me that this was thrusting considerable responsibility upon a boy from the country, at one hundred dollars per year. But I took the weapon as though shooting midnight prowlers was an incidental of the business that could not be overlooked. Thank heaven, there was never any need of carrying his instructions into effect.

The labors of this first day of exhilirating excitement ended with the filling of the coal box, the putting up of the shutters, and a half-hour's exercise with the broom. With head upon the pillow, I was able to review my experiences with some measure of coolness, and then pass into dreamland down an avenue hung with the garlands of hope and promise.

Improvements in Refrigerators.

Competition among manufacturers is now so fierce, that their best efforts must be continually exerted to enable them to hold and extend their trade. A constant succession of new styles that are improvements in fact as well as in name is demanded by the trade. Among the many novelties recently brought forward, it is our privilege to illustrate the elegant Show Case Refrigerator shown herewith. This is made of quarter sawed oak, oil rubbed and polished. Three thicknesses of sheet glass all around, with one-inch air space between, form the insulating walls to the provision chamber. The ice chamber is surrounded with

SHOW CASE REFRIGERATOR No. 18.

bevel plate mirrors on four sides, and has eight walls for insulation, including a packing of mineral wool. The air circulation is the well-known Leonard system of refrigeration, securing absolute dryness in the provision chamber, and lowest possible temperature. The flues, ice rack and shelves are all removable for cleanliness. This style is specially useful to restaurant keepers not only for food, but also for bottled goods. Any dealer having perishable goods to exhibit, such as flowers, butter, yeast, chocolates, etc., will find this to be the article he is looking for. It is 54 inches high, 30 inches long by 24 inches deep. It is manufactured by the Grand Rapids Refrigerator Co., Grand Rapids, Mich., to whom inquiries for prices should be addressed.

Help the Export Trade.

The *Maritime Register* points out the urgent need for increasing our export trade, as "the country has come to that point where it must have more consumers for its manufactured goods." It says:

"Exhibitions of American goods should be made at important trade centres in all parts of the world. Not merely simply exhibits, but goods depots should be established where American manufactures would be on sale. The government could aid most strongly in helping to establish and support such exhibitions. Manufacturers could keep their own agents at these places, or turn over control of heir wares to some one general concern."

This suggestion is of great moment just now to American manufacturers. The necessity for increasing the sale of the products of our mills and factories in foreign markets just now cannot be too strongly emphasized. The consular service of the country should be at once strengthened and stimulated to do its very utmost to further the interests of American exporters. Our home market cannot absorb the products of our factories. If foreign markets cannot be obtained for them the mills cannot be run full time and the present rising wave of prosperity will necessarily recede or be limited.—*New York Herald.*

Increase of Wages.

The Bellaire (Ohio) Nail Co. have given their one thousand employees an increase of ten per cent.

The Pennsylvania Bolt & Nut Works Co., have increased ten per cent. since July 1st.

The Port Chester (N. Y.) Bolt & Nut Works notified their employees that beginning with July 1st their wages would be increased. During the dull times of last year the wages of the men were cut, and the new rates will be the same as in 1893, or before the cut went into effect. The works have been running day and night for the last three months in order to fill orders. Two hundred employees are affected.

The proprietors of the Germantown (Pa.) Tool Works have notified their employees of an advance of 10 per cent.

The Georgia manufacturers, who have subscribed money to erect a building for a display of Georgia manufactured products, at the Cotton States and International Exposition, will hold their second annual convention in Atlanta, during the third week in October. At this time, a suberb collection of their wares will be on exhibition, and will attract the attention of the world. The coming together of this important interest will, without doubt, generate enthusiasm and new energy in the development of the State.

The Illinois Steel Co. announce that "Chas. C. Cluff has this day been appointed general eastern agent of the Illinois Steel Co., his appointment to take effect July 1st. Mr. Cluff will look after all sales for our company in the eastern territory, and any correspondence or inquiries, with reference to price of rails, billets, blooms, slabs, plates, sheets, rods, structural material, etc., should be addressed to him at No. 46 Wall Street, New York city."

W. J. Elliot certainly enjoys his share of business in the thriving town of Canonsburg, Pa., and smilingly states that business is good and getting better. He has built a large four story warehouse to accomodate his increasing trade; has a full line of general and fancy Hardware, painters and builders' supplies, house-furnishings, agricultural implements, stoves, guns and revolvers, and the Cleveland wheel.

Gray, Fall & Co., and Dudley Bros. & Black, Nashville, Tenn., have combined their business interests, under the name of Gray & Dudley Hardware Co. The officers chosen are: President, R. M. Dudley; vice-president, J. M. Gray, Jr.; secretary, J. W. Black; treasurer, James T. Jenkins. The change occurs on July 1st.

The Consolidated Steel & Wire Co., of Chicago, which purchased the Baackes Wire Nail Works, Cleveland, contemplate making several improvements in the plant. The capacity of the barbed wire fence department will be increased. A converter and blast furnace will probably be added.

Munnell & Young, Canonsburg, Pa., carry a large and varied stock of general and fancy Hardware, guns, cutlery, household furnishings, saddlery and builders' supplies. They report business improving, and are having a run on the Rambler wheel.

Kilmer Mfg. Co., manufacturers of Arrow and Adjustable Bale Ties, etc., Newburgh, New York: "We feel free to say that we have experienced good results from our advertisement in HARDWARE, and wish you success in your undertaking."

AMERICAN HARDWARE IN SWITZERLAND.

A report of unusual value has been published by the United States State department, under the heading of "American Hardware and Machinery in Switzerland." We have no hesitation in taking space for its reproduction here, as it is a subject in which American Hardware manufacturers and exporters have a deep and growing interest, and much of the information given applies as well to the sending of goods to other European countries. In a note of introduction, the consul-general says:

The various consulates of the United States in Switzerland are constantly supplied by American houses engaged in the Hardware and machinery trade with trade journals and circulars. No line of manufactures, perhaps, is so constantly urged upon the attention of the American consular representatives in this country as the line of Hardware and machinery; and, in response to the requests made, it is the pleasure of the consuls here to distribute the literature sent them and to furnish addresses of foreign dealers. It is very much to be doubted, however, if the results achieved by the distribution of circulars and the furnishing of addresses are at all considerable, for two reasons —(1) the journals and circulars sent are invariably in English, and (2) the Swiss people are not used to ordering from printed descriptions, but deal directly with agents able to speak French or German, or both, and supplied with samples of goods for actual inspection and examination.*

Realizing that American manufactures of Hardware and machinery have not been obtaining the best results from the methods employed by them, an effort is hereby made by the United States consular corps in Switzerland (in a report given below, prepared by Consul Kemmler, at Horgen), to furnish the information necessary to improvement in this direction. At the same time, it should not be forgotten, that information furnished, but not acted upon will result in nothing. It is no exaggeration to say, that much of the "inefficiency of the consular service" is not inefficiency, but the indifference of American manufacturers to the conditions of successful foreign trade as pointed out and emphasized in *Consular Reports*. That the American, so fruitful in invention and so enterprising in trade within the limits of his own country, should be lethargic when seeking to carry on trade abroad, is, indeed, strange. It is, however, none the less true.

IRVING B. RICHMAN, Consul-General.

St. Gall, April 29, 1895.

REPORT OF CONSUL KEMMLER.

In trying to comply with the request for a report on the direct importation into Switzerland of American machinery and Hardware, I met with some difficulties. The statistical reports of Switzerland are not as specific as could be desired; there are no importing or large wholesale houses in this place, and the dealers at Zurich, to whom I had to apply, are somewhat reserved and reluctant in giving specific information, being apprehensive lest a full knowledge of the extent of their transactions in this line of goods might invite competition and injuriously affect a trade which they have built up under great difficulties, with many sacrifices, after years of hard labor and by dint of untiring perseverance.

For all machinery and metal goods imported into this country (tin-plate, which comes from Great Britain, excepted) Germany is the main source of supply, although it is possible that some American goods, introduced by agencies in Germany, may have been credited to the latter country. The fact, however, is established that machinery and Hardware of American production is not only used in considerable quantities in Switzerland, and, partly at least, brought here by direct importation, though it is difficult to fix the true amount to which this direct trade is carried on.

According to the official statistical reports, there were imported into this country from the United States, during the year 1893, articles falling under the head of Hardware and machinery to the following amounts:

Description.	Quantity.		Declared value.
Agricultural and household machines	Quintals†	309	$8856
Milling machines	"	22	637
Wood and metal working machines	"	16	618
Sewing machines	"	154	11,889
Embroidering machines	"	1	52
Weaving machines (looms, etc.)	"	14	270
Knitting machines	"	3	220
All other machines	"	702	20,323
Two bicycles	"	.	309
Field implements (plows, harrows, horse rakes, etc.)	"	41	775
Cast-iron ware	"	281	3985
Wrought-iron ware	"	839	26,334
Cutlery	"	1	135
Copper and brass ware	"	3	214
Copper, pure or alloyed	"	1012	20,396
Firearms	"	1	482
Wooden ware:			
Rough, unpainted (tool handles, wagon makers' and carpenters' work, witaout metal attachments)	"	380	4034
Same, with metal attachments	"	9	208
Painted, polished, varnished, etc	"	3	159
Picture frames	"	4	361
Brushes, fine	"	2	309

The exportation to the United States during the same year was as follows:

Description.	Quantity.		Declared value.
Dynamos	Quintals	9	$312
Embroidering machines	"	836	14,425
Looms and other weaving machines	"	233	3898
Other machines	"	290	11,539
Milling, knitting, and other labor-saving machines, parts of, and bicycles	"	18	1210
Cast-iron goods	"	...	2
Forged-iron goods: Unfinished	"	11	2157
Polished, tinned, and enameled	"	201	44,225
Scrap and Sheet iron, iron wire, and nickel goods	"	108	15,686
Copper and brass, malleated and in unfinished goods	"	7	927
Aluminum	"	...	49
Tin and articles of tin	"	18	1087
Cutlery	"	2	847
Arms	"	1	484
Tinware, rough	"	9	531
Brushes, rough, unvarnished and unpolished	"	6	1497

Scientific instruments and apparatus were imported from the United States to the amount of 30,635 francs ($5912); orthopedic and surgical apparatus, 93,935 francs ($18,129); and electrical apparatus, 104,605 francs ($20,189). But these goods do not properly belong to the classes under consideration, and in scientific instruments, the export to the United States exceeded the import.

It is well known that, in machine building, the Swiss people have reached a high degree of perfection, and that Switzerland has supplied the United States with many expert machinists. They may lack, in some measure, the inventive genius and progressive spirit of the American, but they are good imitators and not slow to perceive and avail themselves of any chance for improvement. Machine building is one of the important industries in this part of Switzerland, and a large part of the product is exported to other countries. It is not to be wondered at, then, that a good many articles, which might otherwise be imported with profit, are now manufactured right at home. In spite of this fact, the importation of machinery into this country has almost trebled since 1885, while the exportation, although still exceeding the importation, has not materially increased. According to a late statistical report, the imports of machinery in 1893, inclusive of boilers, but exclusive of bicycles, amounted to 173,199 quintals, valued at 18,316,686 francs ($3,535,120), while 191,033 quintals, valued at 23,716,120 francs ($4,577,211) were exported. Bicycles

*As at least one means by which American dealers in machinery can establish a direct Swiss connection, I would mention the machinery agency of Paul Grandjean-De Bely. This agency is located at Le Locle, Canton, Neuchatel, and its proprietor is a man in every way responsible and reliable. He is anxious to establish American connections, to receive consignments of American goods, and to promote direct trade in American machinery.

† 1 quintal=220.4 pounds.

Digitized by Google

were imported to the amount of 1,852,918 francs ($357,613), principally from England and Germany.

The bulk of the whole import in the line of machinery (about 7½ per cent.) came from Germany, where the construction of machines, in imitation of American patterns, is carried on to a very large extent. One firm, which had its productions on exhibition at the World's Fair in Chicago, is represented at Zurich by an agency, and advertises under the name of "German-American Machine Works." They have their traveling agents going through the country, and under the claim that their goods (wood and metal-working machines of all kinds) are equal in style and quality to the best American productions, while they are enabled to sell them at much lower figures, succeed in doing a large business. The same is the case with agricultural machines and implements, mechanics' tools and other labor-saving apparatus, which, being constructed after American patterns—if they do not actually pass as American goods—are represented as being of equal value, and are sold at prices with which American manufacturers cannot compete.

To fight competition of this kind is, of course, uphill work; yet, in spite of these disadvantages, American goods of this kind in question are much used in Switzerland, have been gaining in favor constantly, and are now, to some extent, being directly imported from the United States, while the larger part, it is true, still seems to be procured through agencies in Germany, especially Hamburg and Bremen.

Even in small retail shops, one will frequently find American axes and hatchets, cabinetmakers, carpenters, coopers, and other mechanics' tools, field and garden implements, builders' Hardware, house-furnishing goods, etc., and where the superior merits of these are once known they find a ready sale at higher prices than the old-fashioned and often clumsy articles manufactured in the country, and even higher than the improved imitations are sold at. One of the main difficulties is to get the very conservative and economical people of this country to take hold of, and try to handle, a new article, to the use of which they are not accustomed, and which they regard with suspicion, especially if the price demanded exceeds that of the article they have been in the habit of using.

Thus, for instance, we still see the wood-choppers here generally use the old-fashioned unwieldy axe, with straight rigid handle, although they might do double the work with one of the long, keen-edged American axes, with slightly curved, pliant handle. Even the tools and implements manufactured in Switzerland are not uniform, but differ in style and shape. The consequence is that the dealers have to keep in stock quite a variety of the same implements (shovels and hoes, for instance) to suit the habits and wants of their different customers. This conservatism is a drawback, which can only be overcome by patience and perseverance. At any rate, we have the satisfaction of knowing, as already stated, that the use of American tools, implements, and machinery has largely increased during the last ten years, and is still extending from year to year, thanks to the energetic efforts of a few dealers and importers of such goods, who not only introduce them in this country, but take the trouble, as far as possible, to instruct their customers in the practical use of them.

To one of those dealers,* I am especially indebted for a good part of the information upon which this report is based. This gentleman makes a specialty of the sale of American and English machinery and Hardware, has devoted himself for twenty years to the study of this line of business, has visited the United States several times, and in this way has succeeded in building up a trade, which not only extends all through Switzerland, but even to Italy and other neighboring countries.

According to his statement, the direct importations from the United States comprise builders' Hardware, mechanics' tools, hollow ware, wooden ware, house-furnishing goods, farm and garden implements, saws, saw blades and metal saw frames, nails, scales, meat cutters, etc.; also a few wood and metal-working machines which, however, on account of their high price in the face of the competition mentioned, can only be disposed of in very limited numbers. All of these goods he imports direct, and is always on the watch for, and continually experimenting with, new articles, not always with success, but occasionally at a loss to himself.

Consular Agent Williams, in answer to my inquiry about the importation and trade in American Hardware at Lucerne, reports that a firm in that city is also importing, probably on a limited scale, direct from New York, and no doubt similar firms can be found in most of the larger cities of Switzerland.

As far as agricultural machines are concerned, another dealer at Zurich, to whom I am also indebted for valuable information, has devoted himself to the introduction of that line of goods; but as he has not met with the success he deserved, he will probably prefer not to have his name mentioned. Switzerland, which is only 16,000 square miles in extent, being a hilly or rather mountainous country, the highlands mostly devoted to grazing, and a large part of the hillsides and level lands to wine and fruit culture, while the arable ground, used for grain raising, is mostly divided into small parcels, has but a limited use for agricultural machines. Even where the plow and cultivator might be used, the tillage is often done by hand, women and children assisting in working the ground as well as in gathering the harvest. Still, on larger estates, and on level ground, where the lands are not too much cut up, plows and harrows, cultivators, field rollers, drills, mowers, reapers, and threshing machines are generally in use. I have been told that within the last three years not less than five hundred mowers and reapers have been sold in the country, mostly, however, of English and German, and partly of Swiss, production.

The gentleman referred to who represented the Osborne Reaper Co., of Auburn, N. Y., although not importing direct, but through an agency at Hamburg, had made the sale of agricultural machines a specialty, and, having in connection with his commodious sale and sample rooms a large area of ground suited to the display and trial of goods, was exceptionally well fixed for this particular branch of business. Besides, he let no opportunity pass to place his goods before the public, and never failed to bring them into competition with other makes at the exhibitions and field trials, which are arranged from time to time on suitable occasions.

In a report on one of these trials, the Osborne reaper, the only machine of American production that seems to have competed, is very favorably spoken of and highly recommended, "although it is an imported machine," as the reporter ingenuously adds. The same kind of machine, at a competitive trial in June, 1891, had been awarded the first premium by the Agricultural Society of Germany.

In August, 1894, an exhibition and trial of plows and other agricultural implements took place at Burgdorf in the Canton of Berne. From the scant reports of it, it seems that the competition was confined to plows and small implements, and that, in the trial of plows, the Swiss manufactures came off victorious over all competitors. Not a foreign-made plow received even one of the smallest prizes. This is not surprising, however, in view of the fact that the Swiss artisans, working after strange patterns, understand how to adapt their productions to the special wants of their country, as a glance over the Cantonal Industrial Exposition at Zurich, which took place last summer, clearly demonstrated. Besides, the juries in such trials are naturally inclined to favor the home production whenever it can be done without too glaring injustice.

The official report on the result of this trial has never

*Mr. A. Bannwart, Kauzleistrasse 57, Zurich.

Digitized by Google

come to my hand, but I saw from a newspaper account that the dealer at Zurich above referred to received a diploma as exhibitor. Besides mowers and reapers, this gentleman kept in stock on his spacious warerooms a variety of agricultural machines and implements, and made a fine display of his goods at the Agricultural Exposition at Zurich in the fall of last year, but I am sorry to hear that he has since met with financial reverses, compelling him to make an assignment.

Probably there are other firms in Switzerland engaged in the same branch of business, but I have not heard of them. I know, however, that there is one firm at Zurich making a specialty of American firearms, and that American manufacturers of sewing machines and typewriters have their agencies here.

Whether any stoves of American manufacture are being sold in Switzerland, I have not been able to ascertain. Baseburners built after American patterns are largely in use, but as far as I have seen them they are all manufactured in Switzerland and Germany, although they are generally called "American stoves," as is the case with a great many tools and machines used in the different trades, the forms and principles of which have been copied from American models. As a general thing, only such labor-saving machines of American production as are protected by patent in both countries find their way into the salesrooms and shops of Switzerland, and as the patent laws of this country are not very favorable to foreign inventors, and the benefit to be expected in most cases is not in proportion with the trouble and expense, but few Americans seem to avail themselves of them.

A look through the Cantonal Industrial Exposition at Zurich, which was held from June 15th until October 15th of last year, would have given American machinists a better idea of the extent to which machine building and the manufacture of improved tools and instruments is carried on, and to what perfection it has been brought in Switzerland, than anything that can be said or written about it.

With justifiable pride, though the claim may be exaggerated, a prominent paper of Zurich, in speaking of the exhibits of one of the principal tool-manufacturing firms of that city, says:

"The tools exhibited by this firm fully equal the justly celebrated American products, and the great demand and the widespread use of them is the best proof of their excellent quality."

Under these circumstances, only an expert, or one thoroughly acquainted with the trade, would be able to determine, after close examination and comparison of goods and prices, what class of article or special machines could profitably be imported. The federal exposition, which will be held at Geneva during the summer and fall of 1896, will give those interested in the matter another opportunity to look over the field and see in what particular class of goods they may be able to compete.

I am sorry that I have not been able to obtain price lists sufficient to warrant me in giving comparative figures; from what I have secured, however, I have no doubt that our American manufacturers in many lines are fully able to compete, even in price, with European manufacturers, especially if they send direct, thereby saving the commission of intermediaries. From what has been said, we know that they will find no difficulty in placing such of their goods as are in demand, or of any use here, on the market through firms already existing and experienced in the business, if they do not prefer to establish agencies of their own, which, however, could only succeed under the management of some one thoroughly acquainted not only with the language, but also with the business methods and general conditions of trade in this country. Joint agencies, with depots in the principal commercial cities, would probably best answer the purpose, as has been suggested time and again by American consuls in Switzerland.

If a manufacturer or exporter, however, prefers to introduce his goods through established firms, which is the most direct and least hazardous course, he can do so by sending an experienced representative, who ought to be perfectly at home in the trade and able to speak the French and German languages, and by judicious advertising in the leading papers of the country. The most clever and successful traveling man, if he lacks the knowledge of the languages or dialects spoken here, and is not conversant with the business methods and the wants of the people, will generally fail to accomplish anything. Besides, even if an agent has established business connections, he will have to repeat his visits at regular intervals if he wants to keep his trade. American manufacturers and exporters would do well to follow the example of the business men in Germany and Switzerland, who have their young men specially trained for service in foreign countries. Catalogues, circulars, etc., are but poor substitutes for a live, intelligent man.

The American consuls receive many circulars for distribution, and are generally willing to place them into proper hands, but they rarely lead to any substantial results, partly because they are generally printed in the English language, and partly because they fail to give the information the business men here desire. If they are to be of any benefit at all they must be printed in either German or French, contain a clear description of the goods offered, and give the lowest price of the goods delivered in Switzerland or at one of the nearest seaports on three months' time or at a reasonable discount for cash. The attempt of American dealers to force their home methods and terms upon business men in foreign countries is always likely to result in failure.

Another, and perhaps the most promising way for American manufacturers to start a trade in Switzerland, is to send such of their goods as are likely to find a sale here, or at least samples of them, to responsible firms on consignment. That is the method by which German and Swiss manufacturers have established their large trade in all parts of the world, but American business men do not generally seem inclined to adopt this course. At least, an attempt lately made in this direction by a responsible Swiss firm,* which, with the object of extending its sphere of operations, and being favorably situated for handling and displaying agricultural machines and implements, tried to get a stock of such goods from American firms on consignment, did not meet with any success. Nothing short of a ready sale, with prices at the factory, or at best at an American seaport, would satisfy the firms with which the party referred to corresponded. The probability is, that English or German firms will gladly accept an offer which American firms have rejected. Manufacturers who wish to introduce their productions into new fields ought to be willing to assume some part of the financial risk; at least, that is the way business men in this country generally look at it. Though wide-awake, they are very conservative and do not like to undertake anything without seeing their way out. Before they order, they want to be able to calculate as nearly as possible what it is going to cost them to bring a given article into their salesrooms.

My attention has been called to another matter worth mentioning. In sending goods into Switzerland, the fact that the duties are imposed by weight, and the packing is taxed with the goods, should not be lost sight of. The packing, therefore, ought to be as light as the safety of the goods will allow, every pound of packing increasing, by the amount of duty paid on it, the cost of the article it contains.

A point specially to be kept in view by American manu-

* The Kirchwasser and Handelsgesellschaft, Zug.

Digitized by Google

facturers is that goods intended for foreign consumption should be made of the best quality, according to the tastes and requirements of the customer, as the Swiss, German, and English manufacturers are doing, who have long since learned, and are always ready, to adapt their products to the wants of their patrons in regard to style, quality, design, strength, weight, measure, and everything else, making the habits and usages of the different countries with which they have dealings a special study, and keeping themselves posted on all changes in fashion, styles, improvements, new inventions, etc.

Great care should be taken in respect to labeling, packing, and shipment. Where the foreign purchaser bears the expense of transportation, the most advantageous route ought to be selected, and the patron protected against overcharges, which often consume a large part of his profit.

The duties imposed on machinery and Hardware by the tariff laws of this country are as follows per quintal (220.4 pounds):

	Francs.*
Agricultural and other machines (reapers, mowers, threshing machines, grain drills, steam plows, meat choppers, feed cutters, fruit presses, wringers, churns, sewing, knitting, weaving and embroidering machines, wood and metal-working machines, and other labor-saving machinery and apparatus, except locomotives; dynamos, scales, finished parts of machinery, etc.,)	4.00
Plows, harrows, cultivators, clod crushers, field rollers, horse hay rakes, etc.,	6.00
Scythes and sickles,	7.00
Other field and garden implements, axes, hatchets, etc., made of wrought iron or steel,	10.00
Same, polished, tinned, varnished, etc.,	12.00
Wooden hay forks, rakes, shovels, etc.,	6.00
Same, with iron prongs, teeth, etc.; washboards, bird cages, etc.,	12.00
Hand planers, not polished; coffee and spice mills, with wooden cases, not painted or varnished; tool handles, etc.,	10.00
Same, painted, polished, varnished, carved, etc.,	30.00
Locomotives,	10.00
Rough, heavy iron castings,	.60
Cast-iron goods, hollow ware, stoves, etc., rough,	2.50
Same, with ornamentation or finer finish,	5.00
Wrought iron goods, rough, heavy (plowshares, wagon axles, anvils, etc.),	3.00
Goods made of wrought iron, malleable iron, steel, sheet iron, or wire, not finely finished,	10.00
Same, partly polished, tinned, varnished, galvanized (door locks, nails, bolts, screws, farm and garden implements, axes, etc.),	12.00
Same, finely finished, polished, painted, varnished, enameled, or bronzed (exclusive of agricultural implements)	22.00
Same, nickeled,	25.00
Cutlers' goods,	40.00
Arms of all kinds and finished parts of same,	50.00
Lead, copper, brass, nickel, and bronze goods according to finish and amount of work involved in production,	8.00 to 60.00
Farm and freight wagons, trucks and sleds,	6.00
Carriages, sleighs, etc.,	20.00

As will be seen from these figures, the Swiss tariff is not prohibitive, but may be termed a tariff for revenue, with incidental protection. While it admits raw material free, or at a nominal duty, it increases the rate in proportion with the finish and amount of work required for the completion of the article, and thus, without creating or fostering monopolies, stimulates the industries of the country and gives them a chance to compete successfully with other nations in the markets of the world.

Summing up, I can only refer back to what I have already stated, and repeat what Frank H. Mason, Esq., then United States consul at Basle, and now consul-general at Frankfort, expressed years ago when he wrote:

As a principle it may be stated that the introduction of American manufactured products into Switzerland can be accomplished only by the same means that are employed for a like purpose at home. The goods must be advertised, intelligently exhibited, submitted to purchasers for inspection and trial; in a word, the business, whatever it is, must be pushed, as Americans are accustomed to push their trade at home, and in whatever foreign countries they have obtained a footing. . . . When the same energy, persistence, and foresight which are now displayed in the manufacture of American goods are turned to the work of selling them, there will come the crisis of competition which Europe will have cause to dread. When American merchants establish permanent agencies in the new countries where Germany, France, and England are now competing for commercial advantages; when young men are sent to these agencies to learn the language and study the habits and wants of the people; when American goods are made, packed, marked, and in every way adapted to the peculiar notions and requirements of the people for whose use they are destined; and when the foreign service of the United States is placed on the secure and sustained footing that has been found most advantageous by other nations; then it will be found that the people who have created a great nation within a century, are merchants as well as manufacturers and farmers; that they know how to sell as well as create. There will then be heard far less than now of strikes and crises in American industry, and the United States will have taken the high and influential position as a commercial nation, to which it is entitled by its unequaled resources, the energy, enterprise, and progressive spirit of its people.

This is as true to-day as it was ten years ago, when it was written; but the American manufacturers and exporters, having meanwhile gained a pretty strong foothold in Switzerland, have to-day, as explained above, much more favorable ground to work upon than they had at that time. If they only improve the opportunity and employ the means suggested, they ought to be able to extend their trade with this country to a considerable extent, though the field is not a very large one, the wants of it rather limited, and the competition keen and lively.

With their intelligent, skillful labor, improved tools and machinery, inventive genius, progressive spirit, cheap raw material, and other advantages, American manufacturers ought to, and no doubt soon will, be able to compete in most branches of industry with almost any country in Europe, even against the cheaper, but somewhat slower and less effective labor of those countries.

Horgen, April 25, 1895. W. F. KEMMLER, Consul.

*1 franc=19.3 cents.

Bissell's "Grand Rapids."

Of the thirty-eight different brands of Carpet Sweepers made by the famous Bissell Carpet Sweeper Co., probably none have a more enviable reputation than their celebrated "Grand Rapids." All of the latest and best patents taken out in carpet sweepers have been used on this machine, and in consequence it has had a numerous sale. Probably 60 per cent. of the output of the Bissell Carpet Sweeper Co. consists of "Grand Rapids." It is known and recognized now as the leader in all sections of the civilized world. It is made in two styles, japan and nickel finish, listing respectively $24 and $27 per dozen.

Simon H. Arnold, Houstonville, Pa., is a new one in the Hardware line, but is enjoying a good trade. He occupies his new three-story brick building, and carries a line of house-furnishing, general Hardware, cutlery, guns, agricultural implements, in fact, a full line of everything in the Hardware line. He would like to have agency for a good wheel. Mr. Arnold is progressive, and will meet the success he deserves.

The new building of the Union Metallic Cartridge Co., Bridgeport, Conn., which was contracted to be erected by the H. Wales Lines Co., in sixty days, is completed. It was just fifty-four days since work was commenced. The job was one of the quickest on record.

The tack works in North Reading, Pa., have been leased by the Rick Bros. to Norristown parties, who will have them in full operation in a few days. The plant is equipped to manufacture tacks of all designs and sizes, but has not been running for several years.

Digitized by Google

NEW GOODS IN THE MARKET.

If you have anything NEW, let the world know it by illustrating it in these columns.

NO CHARGE WHATEVER is made, direct or indirect, as our interest lies in showing the readers of "HARDWARE" where the LIVE manufacturers and wholesalers are, and what they are doing.

When your NOVELTY or SPECIALTY is ready, send us an Electrotype and descriptive matter, which will appear immediately.

The Hardwaremen everywhere read this department; it is to your interest to make prompt use of it.

A New Window Spring.

George S. Colburn, West Gardner, Mass., is manufacturing a new Window Spring, illustrations of which appear here. Fig. 1 shows the spring. Fig. 2 shows the springs attached to the window frame. The manufacturers claimthat these springs

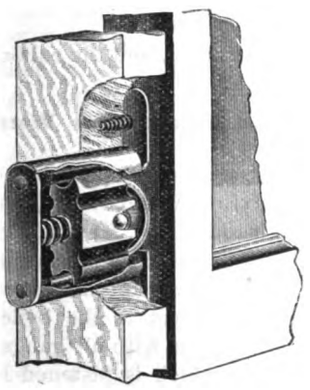

FIG. 1.

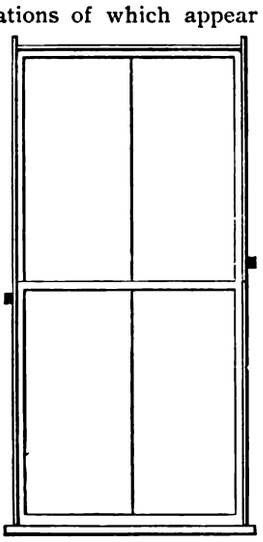

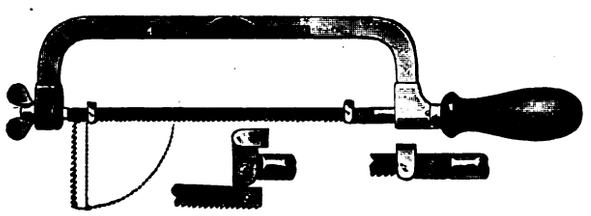

FIG. 2.

work equally as well as weights and pulleys and are less expensive. The statement is made that these springs do away with the pockets that are necessary with weights and pulleys, thus providing against the wind blowing in. The windows can also be fitted very tight so they will not rattle. Two springs are required to fit a window. They can be obtained of A. J. Wilkinson or Burdette & Williams, Boston, Mass., at $4.50 per dozen.

Acme Hack Saw Frames.

The Holt Mfg. Co., Hartford, Conn., are putting on the market the Acme Hack Saw Frames; illustration of one is herewith shown. The manufacturers state "that these frames are simple, complete and sensible;" also "that there are no pins to break and that they are most economical, as it requires less time to replace a saw than in other frames." The point is made that the frames are strong, as the saw is supported by buttons. To adjust a saw, hook

one end to the front end of the frame as shown in illustration, bring the other end up to the places on handle and drop the button. These frames are fully nickel-plated and are nicely packed one-third dozen in a box. Eight-inch, price per dozen, $9. Discount to the trade.

Walker's Quick and Easy Cork Puller.

The Erie Specialty Co., Erie, Pa., are offering their quick and easy Cork Puller in an improved form, as here shown. The extension of the mouth of the machine is designed to make a centering and gripping device to hold the bottle in line with the screw and to thus prevent all possibility of breakage of the bottle or screw by coming in contact with each other. One movement of the lever forward draws the cork and the reverse movement throws the cork off and places the lever back in position. It is explained that owing to the angle of the base only a slight pressure is re-

FIG. 1.

quired to hold the bottle in place while the cork is being drawn. In Fig. 2 is shown the crown and seal lifter attachment conveniently placed at one side of the puller, this feature being referred to as a valuable addition. The machine is finely finished in nickel, and the manufacturers state that it is strongly constructed in every part; that each

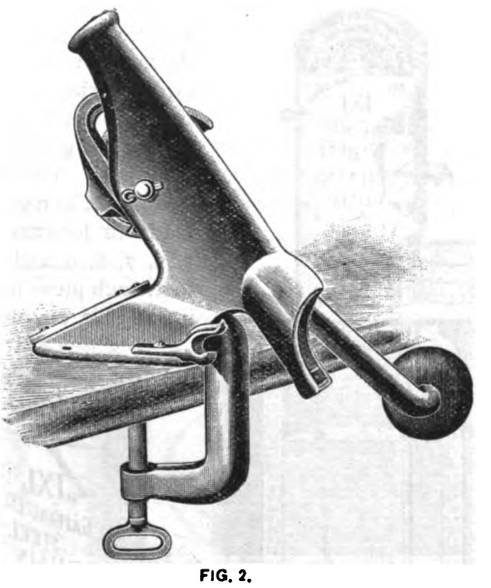

FIG. 2.

screw is subjected to a severe test, and that the nut in which the screw works is made of a superior composition, giving lasting and wearing qualities.

The "Quincy" Corn Popper.

The illustration herewith shows a new corn popper which the Quincy Hardware Mfg. Co., of Quincy, Ill., are making and offering to the trade, under the name of the "Quincy" Popper. It is explained that to shake the corn, it is only necessary to turn the crank. The corn is thus much more easily agitated, and will not burn. The handle is made of tinned wire neatly twisted, and so arranged that it cannot get loose from the basket. The handle wires project

Digitized by Google

through the basket far enough to rest on the jamb of a stove when the lid is lifted out, as shown in illustration. By revolving the crank, the unpopped corn will remain at the lower edge nearest the fire, thereby utilizing every good

grain. The lids slide on and cannot work loose. These poppers are made in two sizes, viz.: one quart and two quart, and are packed either knocked down or put together complete.

I. X. L. Pump, Curb, Tubing and Bucket.

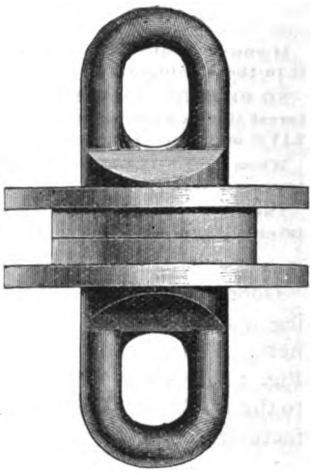
The illustrations here given represent the I. X. L. Patent Galvanized Steel Chain Pump, Curb, Galvanized Steel Tubing and Rubber Bucket, put on the market by O. P. Schriver & Co., Cincinnati, Ohio. Fig. 1 gives a view of the pump in working order; Fig. 2, the curb, is made of galvanized sheet steel, and this, with the tubing, Fig. 3, is put on the market to overcome the objection to wood curbs and tubing. The manufacturers further state that the curb is painted and varnished to make it durable, and that it will not warp, rot or fall to pieces. The tubing, which is made of No. 24 galvanized steel, with a reservoir at the top and a funnel at the bottom, is referred to as not making the water taste as wood tubing does, as not rusting or accumulating filth, and as anti-freezing, as the reservoir piece has a small hole in it to allow the water to run out. It is stated that the tubing may also be used on any make of wood curbs, as the stirrup on all the other curbs will fit the square reservoir box on the galvanized tubing. The reservoir tubing is made in lengths of 5, 6, 7, 8, 9 and 10 feet, each piece having a half coupling

FIG. 1.

FIG. 2.

FIG. 3.

on it to fit the other half on the funnel tubing, the latter being made in lengths of 6, 8 and 10 feet. Plain tubing is used in cisterns or wells where the depth is greater than 19 feet, then a piece of plain tubing is added between the reservoir and funnel to make the required length. The advantages of the rubber pump bucket, Fig. 4, are enumerated by the manufacturers as follows: "The bucket cannot be put in wrong; is made of first quality rubber, and is double—two wearing edges—with a corresponding increase of suction power; has a water space that allows a water packing, which is as good as rubber, without increased friction; is reversible and self-adjusting, as the pliability of the rubber allows it to adjust itself to any size tubing; a reverse motion of the crank will not injure it, and the rubber cannot be stripped from link."



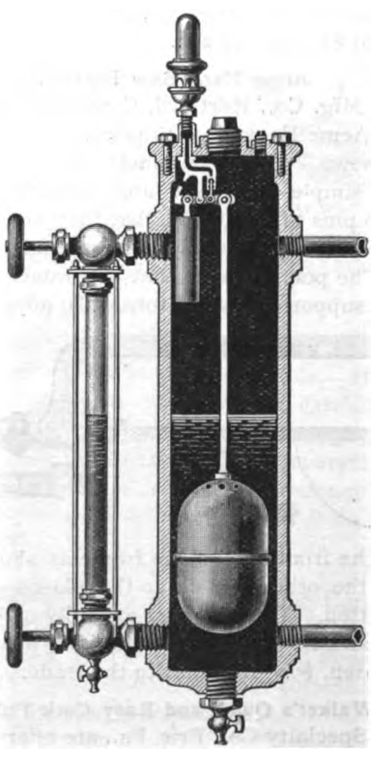


FIG. 4.

Combined Water Column and Counterbalance Low Water Alarm.

The accompanying illustration shows the Combined Water Column and Counterbalance Low Water Alarm, put on the market by the Ashley Engineering Co., Hawthorne, N. J. The principle of its operation is based upon the difference in weight of a body suspended in air and immersed in water. The alarm has two connections to the boiler common to a water column, and is shown with all gauges attached. The cover of the column, which is fastened in place by tapped bolts, is removable, and to this is attached all the mechanism of the device. Suspended from the under side of the cover is a valve working in combination with a double-ended lever, having its fulcrum between its two ends. From the ends of the lever, two cylinders are suspended, the upper and smaller one of solid iron, and the larger, hollow, with holes in its top, so that it is filled with

water. When the water stands at the desired level in the boiler and column, the solid cylinder is heavier than the larger immersed cylinder, and consequently keeps the valve closed. As the water in the column lowers, the hollow cyl

Digitized by Google

inder filled with water overbalances the weight of the solid cylinder, when deprived of the buoyancy of the surrounding water, and opens the valve, admitting steam to the alarm whistle. The solid cylinder regains its counterbalance on the admission of water to the boiler and column, closing the valve. Its working can be tested at any time by simply opening the valve at the bottom of the column, thus lowering the water in the column and sounding the whistle. By removing the bolts in the cover, the whole of the mechanism can be lifted out for cleaning or inspection, and easily replaced without touching the boiler connections, which is important.

Automatic Lawn and Garden Rake.

The Buffalo Specialty Mfg. Co., Buffalo, N. Y., are offering the trade a new Rake, illustration of which appears here. Fig. 1 shows the rake in the position it automatically assumes when pulling on the handle in the act of raking; Fig. 2 shows the position it assumes when pushing on the handle in the act of returning for another rakeful. This rake is constructed so that the

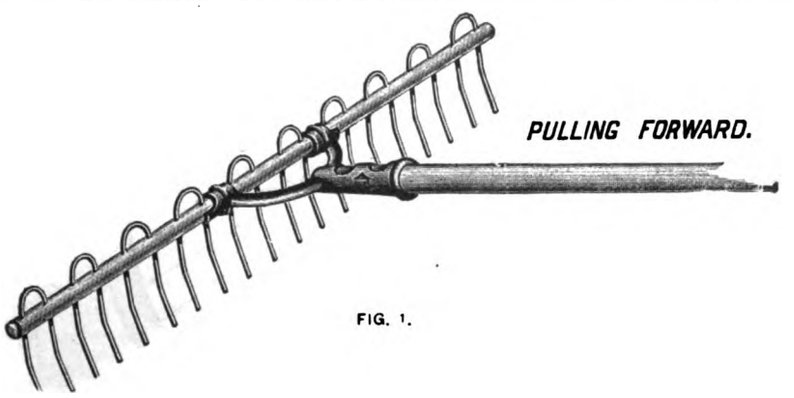

FIG. 1.

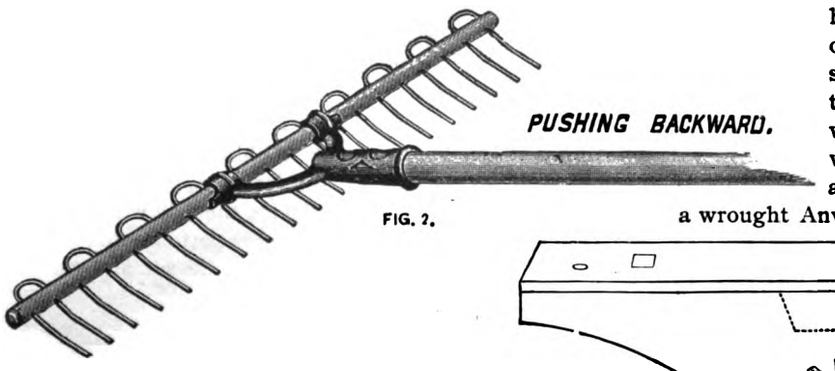

FIG. 2.

head rolls in the casting, and instantly and effectually discharges the whole load of grass, hay or leaves. It can also be used as a garden rake by dropping two nails into holes drilled for that purpose in the casting and rake. The rake is thereby converted into a rigid head rake, as the nails prevent the head from rolling in the casting.

Edward Smith & Co., No. 45 Broadway, New York, varnish makers and color grinders, may well be proud that their products play so important a part upon the *Defender*, the newly-launched vessel which is to uphold the honor of America in the coming great race. They have a note from the Herreshoffs, under date of June 13th, which says: "We shall use the Spar Coating and I. X. L. No. 2 Varnish lately ordered of you, on *Defender;* the former on the spars and such woodwork as there is to be varnished outside and the latter for inside work."

The Bissell Carpet Sweeper Co. furnish a neat oak easel on which to display samples, free of charge on orders for one-half dozen sweepers.

The Samson Anvil.

There is a new Anvil on the market, made by the Van Wagoner & Williams Hardware Co., Cleveland, Ohio, and No. 14 Warren Street, New York. The accompanying illustrations show many of the good points of the Samson

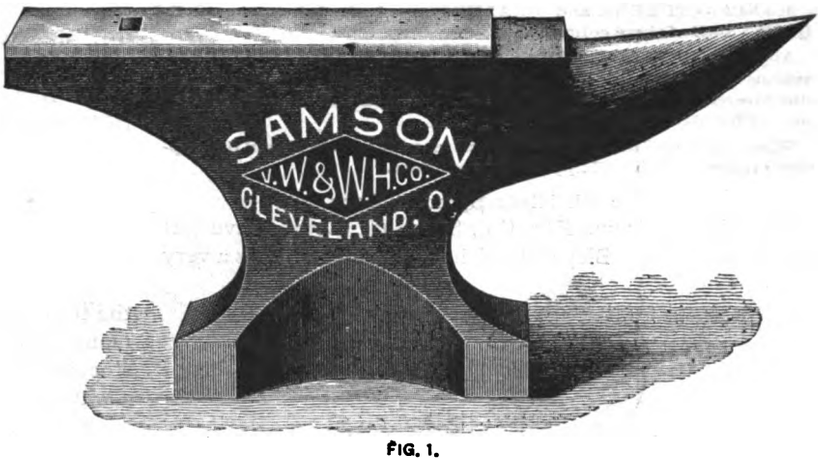

FIG. 1.

Anvil. Fig. 1 shows its general appearance, and Fig. 2 shows some of the points of construction. The base of the Anvil is of tough cast iron. The face is of three-fourth-inch crucible cast steel, so well tempered, that though hard enough in the middle to stand the severest blow, yet the edges are sufficiently soft so as not to chip. The horn has a solid point faced with tough untempered steel, hard enough so it will not bend or dent. Underneath the horn is a long, heavy shank welded to the steel facing and extending to the middle of the anvil. This is shown in Fig. 2, the dotted line B indicating the shank. It is further stated that some of the points that should recommend this Anvil to blacksmiths are as follows: The shape of the horn: It is long and pointed and of the right oval, giving plenty of clearance when a horseshoe or anything round is being worked. The trueness of the Anvil: They being prepared with a special set of grinding machinery, which insures absolute trueness. The shape and appearance of the whole Anvil resemble a wrought Anvil. The process used in welding the heavy

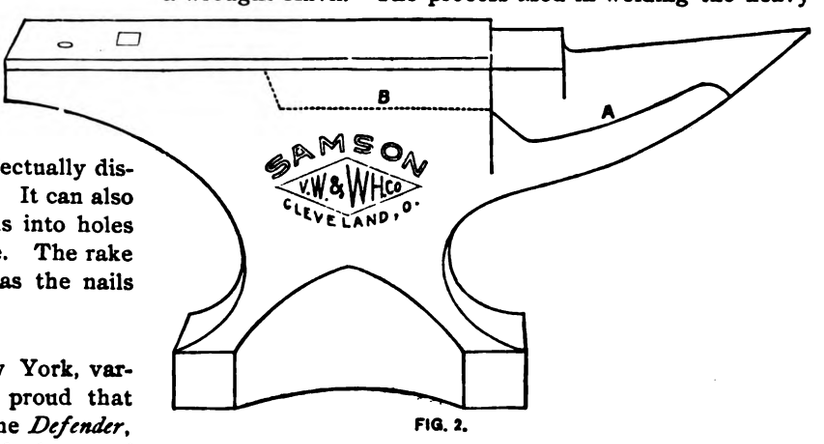

FIG. 2.

facing to the cast iron is known only to the manufacturers, and is the result of experience and careful experiments, and by this method they are able to produce a strong, handsome and shapely Anvil at a moderate price.

The Birmingham Tack Works, Birmingham, Ala., were destroyed by fire on June 24th. The loss amounted to $10,000.

The Vapor Stove Co., Lorain, Ohio, and the Moon Gas Range Co., of Columbus, Ohio, have been consolidated.

ILLUSTRATED BICYCLE NOVELTIES.

MANUFACTURERS and DEALERS are invited to make FREQUENT USE of these columns.

Anything NEW in BICYCLES or BICYCLE NOVELTIES should be sent us immediately. NO CHARGE, direct or indirect, is made, as our interest lies in SHOWING THE HARDWAREMAN what is going on in THE BICYCLING WORLD.

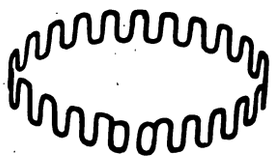
When your NOVELTY is ready, send us an Electrotype and descriptive matter, which will appear immediately.

Yale Chainless Sprocket Lock.

The Yale & Towne Mfg. Co., Stamford, Conn., have put on the market the Bicycle Lock here illustrated. It is a very

convenient lock designed to fasten the chain and sprocket wheel together. This lock measures 1x1⅞ inches, is flat, neat in appearance, and is provided with two keys. The lock is small enough to carry in the vest pocket or to slip in the tool bag. Price, 50 cents.

The "Eureka" Brazer.



The Union Heater Supply Co., Detroit, Mich., are putting on the maket the Eureka Brazer, illustration of which is here shown. One of the advantages claimed for this Brazer is that the burners are mounted on swivel joints, thus enabling the operator to adjust them in such a manner that the flames will meet where the heat is required upon the work to suit the operator. The tank is made of heavy

galvanized iron and strong enough to stand any air pressure which is required to get good results from the flames. The air gauge is so placed that the operator can always see the amount of pressure there is on the tank, as it requires from 15 to 20 pounds to do good brazing. The pump shown in the illustration is made of seamles brass tubing 2x22 inch cylinder with metal valves and iron base.

Devore's Trousers Guard.

L. M. Devore & Co., Freeport, Ill., are offering a new bicycle Trousers Guard as shown in accompanying illustration. It is constructed of spring wire, bent in a series of folds, so as to present a surface of sufficient width to hold

the trousers and at the same time make an elastic and permanent spring. When not in use it can be slipped over the stocking above the shoe top and worn without discomfort, always being ready and in position for use. These springs are furnished japanned or coppered.

Dudley's Wheel Balancer and Repair Stand.

The accompanying illustrations represent a wheel balancer with device for gauging periphery of wheel, manufactured by the A. Dudly Mfg. Co., Menominee, Mich.,

FIG. 1.

and for whom Parkhurst & Wilkinson, Nos. 14 to 164 Kinzie Street, Chicago, are sole sales agents. The manufacturers claim for their new device the following points of excellence: "The Wheel Balancer is portable and does not need to be fastened down, and it may be set and removed

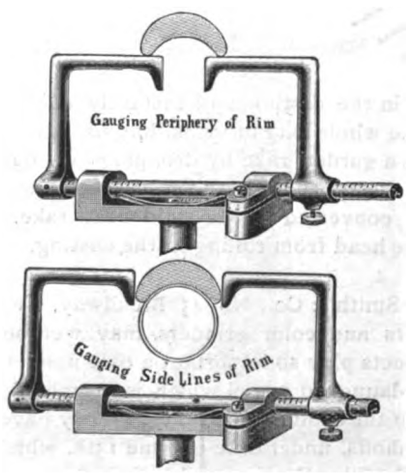


FIG. 2.

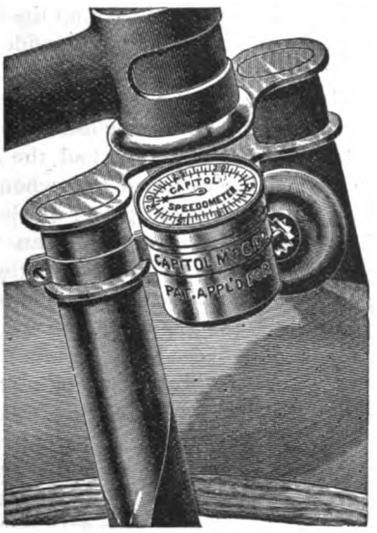
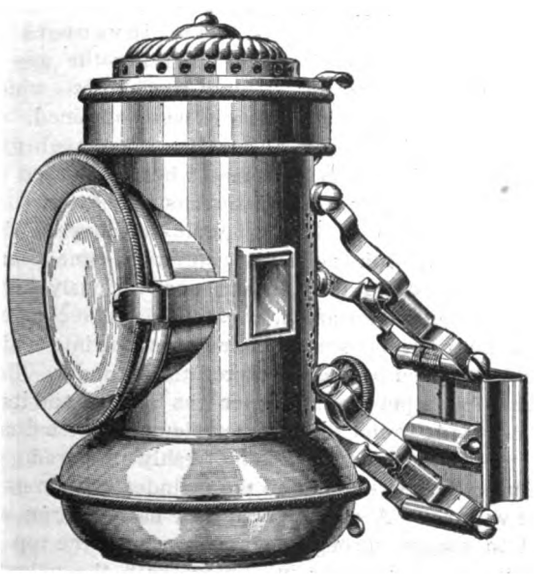


to any place desired. The Stand will balance any wheel from 24 to 30 inches diameter and can be set for any width of a wheel hub. The extension jaws of the hangers have springs, so the wheel-axle of any thickness will be held firmly in place. The balancing gauge is adjustable in every direction and will gauge the wheel-rim on its circumference and side lines, and will also gauge a wheel without remov-

Digitized by Google

ing the tire. The gauge is made of brass and steel, nicely finished and nickel-plated," and is sold for a reasonable price. Fig. 1 shows Wheel Balancer. Fig. 2 shows the gauge.

The Capital Speedmeter.



The illustration herewith gives a very fair idea of a novel little machine which the Capital Mfg. Co., of Nos. 125-137 Rees Street, Chicago, are putting on the market. As its

name indicates, its purpose is to give the rider the speed at which he is riding in miles and fractions. It fastens to the fork of the machine below the head, is therefore out of reach of mud, and can easily be read from the saddle. The contrivance is singularly simple, and weighs but three ounces. It retails at $3.50. The Capital Co. have manufactured cycle sundries since early in the game, and their guarantee of its reliability is ample. Its reliability, dust and water proofness are all guaranteed.

Cyclops Bicycle Lamp.

The Manhattan Brass Co., No. 338 East Twenty-eighth Street, New York, are putting on the market the Bicycle Lamp herewith illustrated. The lamp is made entirely of brass, nickeled and polished with a patent lock to secure it to bracket, and a bell-shaped reflector, ruby side lights and a powerful lens. The lamp is designed to burn kerosene or any good quality of illuminating oil, the reservoir

being large to enable it to burn from eight to ten hours without trimming. The top of the lamp is removable, being secured at the front with a pin and at the back with a catch. The oil reservoir is secured in a like manner and may be removed from the body of the lamp. The manufacturers state that this lamp weighs less than thirteen ounces; that it gives a splendid light and will not blow or jar out; does not become overheated, and will neither smoke nor smell.

American Screw Co.'s New List.

19	Brass Machine Screws.	Aug. 1, 1894.
34	Iron Rivets in Bulk.	Nov. 1, 1894.
35	Thousand Rivets.	Nov. 1, 1894.
36	Block and Carriage Rivets, and Burrs.	Nov. 1, 1894.
37	Hame, Coopers', and Trunk Rivets, and Belt Rivets and Burrs.	Nov. 1, 1894.

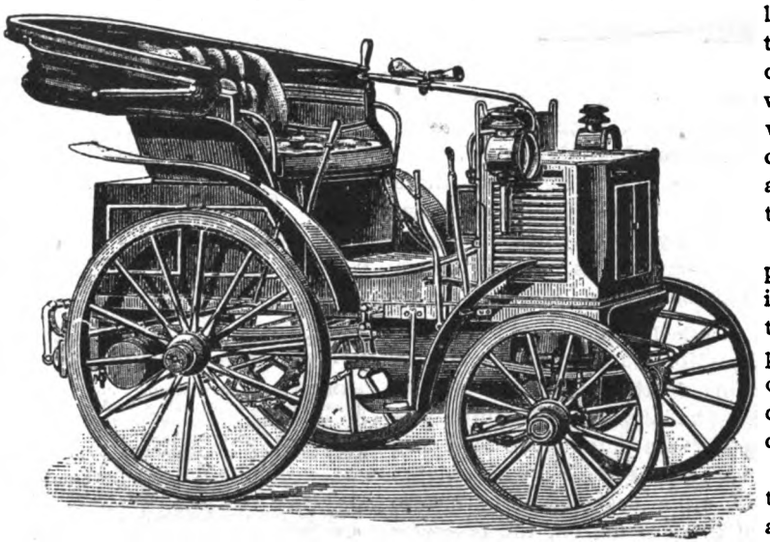
Printed Sheets, for insertion in the catalogue, will be furnished upon application.

Many teachers have undoubtedly used liquid slating that made too smooth or too rough a surface, neither of which is desirable. The Lawrence Slating avoids these faults, and produces a jet black surface that may be easily written on, that absorbs little chalk, and from which the chalk marks are easily erased. It can be applied equally well on plaster, wood, or paper. One gallon will cover 160 square feet, three coats (new wall), or 240 square feet, two coats on old boards much worn off, or 480 feet on boards slightly worn. It is put up in gallon, half-gallon, quart, pint, and half-pint cans by W. W. Lawrence & Co., Pittsburg and Buffalo.

Aluminum cofins seem to be the proper thing now. A Pittsburg firm is making them at the rate of 15,000 a year.

The Wilkinson Shear Co., of Reading, Pa., have organized with a capital of $20,000.

C. H. Sager Hardware Co., Lebanon, Ill.; incoporated with a capital of $10,000.



Digitized by Google

IS IT GOOD-BYE TO THE HORSE?

The horseless age is almost upon us. The fact is heralded by the endless improvements in the modern methods of locomotion, the cable, the trolley car, gas motors, the bicycle. Whether our useful equine friend will object to such a state of affairs remains to be seen, but certainly some of the species such as we daily see, bony, lame, knee-sprung, dragging the lumbering stage, the heavy street car, or the clumsy truck, will think the Millenium Dawn is surely here. Societies for the prevention of cruelty to animals will also have to seek other fields for their energies.

It is whispered in New York that an attempt is soon to be made to operate the department store delivery wagons by gas motors. The feasibility of such a move has been demonstrated by the numerous races for horseless carriages held quite recently in France. Some of these unique vehicles maintained an average rate of over fifteen miles an hour.

Inventors of petroleum engines in this country have come to the conclusion by exhaustive experiments, that the work of an ordinary draft horse can be accomplished by a gas or petroleum engine for the trifling sum of one cent an hour. This fact will alone recommend it to our enterprising and moneymaking merchants. From the delivery wagon to the carriage and buggy is the shortest of steps, and no doubt if the system is found thoroughly practicable we will all soon be seen bowling along in our horseless vehicles up the streets and avenues. We may then look for such advertisements as this: "Wanted a first-class coachman. None but experienced gas motormen need apply."

THE PANHARD & LEVASSOR MOTOR, WINNER OF RACE IN FRANCE: 750 MILES IN 24 HOURS AND 53 MINUTES.

The good road movement inaugurated by the lovers of cycling, is but a gentle insinuation that our public highways will soon be needed for a different style of conveyance. If the system of locomotion by which the gas is generated by the use of petroleum, be universally adopted, America with her vast supply of oil wells, would at once assume a commanding position among the commercial nations of the world, as most of the oil would have to be bought here. Bell manufacturers would be in it too, as all the new conveyances would have to be provided with gongs. Instead of the old and hackneyed expression of "Hitch up the horse, John!" we will then hear the order to "fill the tank."

Electricity is, to use a common expression, still in its infancy; but enough has been accomplished with this subtle element, to show how great are its possibilities. It is generally conceded that it will eventually supersede all forces as a motive power, but just at present for general use it is a trifle too expensive, so inventors are experimenting with oil engines and gas motors.

Like all the improvements made in steam engines, from the earliest and crude inventions to the days of our swiftly running locomotives and quadruple expansion marine engines, the improvement on gas or petroleum engines has been in matters of detail more than the application of new principles. A method of utilizing the force of gas caused by explosions at regular intervals having been found, the minds of inventors and mechanics in both the old world and the new, were put to work to perfect this style of engine. A fly-wheel sufficiently heavy to take up the surplus force of gas at the moment of explosion was added. This had the desired effect of correcting the irregularity of motion heretofore existing. The piston was thus brought back by the momentem acquired by the fly-wheel to the position in the cylinder where a fresh explosion had the greatest propelling force upon it. It was found that when the work to be done was less than the normal power of the engine, too many explosions occurred, the machine ran too fast, and there was a great waste of fuel. This defect was remedied by an ingenious application of the principle of the regulation governor, by which the gas valve was not opened when the speed of the engine exceeded a certain limit. Again, the cylinder in which the explosion took place became so hot after a time that the entire engine was liable to be smashed, owing to the expansion of parts made to fit accurately. A water jacket around the cylinder and a circulating cistern in connection with it prevented this catastrophe. The heated water flowed out above while the cold water ascended, became heated, and passed into the cistern in its turn.

With many such improvements, some trivial in themselves, but all of them of the utmost importance in making the contrivance of commercial value, the gas engine came into general use.

The problem of making the gas engine as portable as the steam engine was next considered. The inventors were here met with the difficulty of carrying the gas itself. Many tanks were made of steel or copper, into which the gas was forced until high pressures were obtained, but the result was unsatisfactory. No matter how much gas was condensed, its bulk was enormous when compared with a solid, such as coal, or a liquid, such as petroleum.

Some years ago a German genius discovered that he could adopt the ordinary gas engine with some alterations as a consumer of liquid hydro-carbons, variously known as petroleum, naptha, paraffine, or gasoline. The chief change was the addition of a small heating chamber into which the liquid fuel passed before it entered the cylinder. Beneath this chamber a petroleum burner was lighted, and its metal covering made so hot that the petroleum vaporized as soon as it entered the chamber. The freshly prepared gas was then in position to explode in the cylinder as soon as it was mixed with air. A small portion of each charge was allowed to escape through an opening near the top of the cylinder, so as to come in contact with the naked light which heated the vaporizing chamber. These various steps were automatically regulated by valves which regulated the force and time of the explosions.

Thus a machine was evolved by which the necessary amount of fuel could be conveniently stored. It was next deemed necessary to diminish the size of the gas engine. This task was accomplished by shortening the stroke of

Digitized by Google

the piston and at the same time enlarging the cross section of the cylinder. This gave a shorter connecting rod between the piston crosshead and the pin on the fly-wheel. In order to gain increased power with a shorter stroke, the speed of the engine had to be increased from 120 to 600 revolutions per minute.

The result arrived at finally was a small stunted engine eighteen inches high for two horse power.

At the races held in France during June the petroleum motor showed its superiority over the steam and electric carriages. The three winning carriages were operated by Daimler motors which are manufactured by a Parisian firm. These motors are claimed to be the lightest on the market.

These motors "run at a constant angular velocity of 700 revolutions per minute, and actuates the hind wheels through a friction gearing and a train of wheels that permits the running at four different normal speeds of about 3, 5, 7 and 10.5 miles an hour. The intermediate speeds are obtained through the sliding of a friction socket skillfully maneuvred by the driver through the aid of a pedal. The brake, which is very powerful, and of the Lemoine pattern, is controlled by a pedal. It actuates upon the intermediate axle, and this prevents the wear and the stripping off of the rubber tires with which the wheels of the carriage are often provided. In cases of urgency, or for steep slopes, the wheels are acted upon directly by means of a block brake controlled by a lever arranged upon the right side of the carriage within reach of the driver's hand. The setting of the brakes automatically ungears the motor, which continues to revolve despite the stopping of the vehicle. The noise produced by the exhaust is effectually stifled. The motor is constructed in three parts, a reservoir containing ordinary petroleum, a carburetor, and an engine with one or two cylinders. The reservoir will carry petroleum enough for a journey of nearly 200 miles. In the carburetor the air is drawn through the petroleum and passes through a sort of filter which prevents the passage of any liquid. The mixed gases are then rapidly compressed and exploded in a capsule made red hot by a flame. The motor has a four cycle motion, and works with remarkable smoothness. The cooling of the cylinders of the motor—a most important point—is assured by a circulation of air contained in a reservoir of 2440 cubic inches capacity. This water becomes heated and vaporized, especially during the summer, so it is necessary to replace it at the rate of from 420 to 600 cubic inches per hour of running. The gasoline employed in the Daimler motor has a density of from 0.7 to 0.705. The reservoir that contains it, and which is placed in front, suffices for a run of 48 miles, but more than 180 miles can be made by arranging a supplementary reservoir in the rear. The mean consumption is about 10 cubic inches to the mile, making the cost of running about three cents an hour." The speed is adjusted by means of a lever.

Experiments have recently been made by the authorities of the New York, New Haven & Hartford Railroad with electric motors, all of which proved most satisfactory. In a short time, comparatively speaking, we will see the railroad locomotives replaced by electric engines, and if King Richard III. of Shakespearian fame should pay a visit to earth, he could indeed cry aloud for "a horse!" without finding one. The course of the inventor is ever onward.

R. W. Ross & Co., Hardware, Prescott, Canada, July 3, 1895. HARDWARE Publishing Co.: Dear Sirs—Enclosed find post-office order for $1, renewing subscription to HARDWARE. We find your paper to be exceedingly good value.

The Aetna Nut Works, Southington, Conn., have increased wages seven and one-half per cent.

Yale Stylo-Chiselry.

The above is the title of a very handsome and artistic monograph just issued by the Yale & Towne Mfg. Co., Stamford, Conn., and New York. It is printed upon very heavy calendared paper, contains near forty pages, and the illustrations of this new style of work which appear therein, are of the finest character of art-printing.

The facts set forth in this publication describe an important addition to the development of art, and its application to metal-working. While based on practices now known in greater or less degree, its present perfection is due to the many and most important improvements which have followed as the result of several years of effort, and an unstinted expenditure on the part of the Yale & Towne Mfg. Co. While the interest of this company in the advancement of art and its application to the products in which they are concerned, has been too long continued and is too well-known to need assertion, they certainly must take particular pride in this latest accomplishment.

Among the articles illustrated in this work are a number of tablets, comprising ecclesiastical, military and historical. A great deal of attention is paid to general decorative work, numerous specimens of the same being presented. A history of work of this character in metal is given, and in continuation thereof we quote from the monograph as follows:

"In these pages are shown for the first time examples of a new art, and its products, both of them so new as to demand the coining of a name by which fitly to designate them. Hence, the term 'Stylo-Chiselry' has been adopted, and this in turn prefixed by the trade name 'Yale,' which latter carries with it all of its established prestige and repute, standing, as it does, for all that is best and truest in design and execution of both mechanical and artistic products.

"In this modern revival of an art which if not 'lost,' has at least long been slumbering, but which in its best phases is always beautiful, possibilities have been revealed, heretofore almost undreamed. By the use of modern methods, methods which retain all the individuality of the artist and lose none of the subtlety of the most delicate details; and furthermore, by re-enforcing the manual skill of the craftsman with all the art and appliances of the workshop of the mechanician and the laboratory of the chemist, it has now become possible to produce 'Stylo-Chiselry' at a cost within reason and usage, and at the same time of artistic value equal to that of the Taj of Agra, the mosques of Cairo, the colleges of Oxford or the aisles of Westminster.

"Possessing processes both old and new, processes the development of which has required years of labor and discovery, and which are constantly being developed by continuous expenditure of skill and money, the Yale & Towne Mfg. Co. now places before artists, architects and connoisseurs—in short, before all who admire and appreciate beauty, utility, and permanence—some of the products of this old, yet new, industry, only adding the essential fact that Yale Stylo-Chiselry, so far as expense is concerned, is available not only for temple, cathedral and palace, but also for all buildings to which it may appropriately be applied.

"The illustrations which are here given, while necessarily limited in numbers, are sufficiently varied in character to demonstrate the possibilities of Stylo-Chiselry and its practical applications. They will suffice partly to indicate its character and use, while many modifications will suggest themselves or be furnished by the makers, to meet the endless requirements which circumstances may demand and which Stylo-Chiselry can supply even beyond expectation."

The Reading Hardware Co., Reading, Pa., have recently started to run full time, on account of the increased number of orders they are receiving. Another sign of the good times.

Yale & Towne Announcement.

The following announcement carries its own explanation:

THE YALE & TOWNE MFG. CO. Stamford, Conn.

THE BLOUNT MFG. CO. Boston, Mass.

June 27, 1895.

To the Trade: The undersigned hereby announce that they have entered into relations whereby the Yale & Towne Mfg. Co., on and after July 1, 1895, will become the sales agent of the Blount Mfg. Co., and will have the exclusive control of the Liquid Door Checks made by the latter, already so favorably known in the trade.

No change will be made in existing prices or discounts, and the present high quality of the goods will be fully maintained. On and after July 1st all correspondence and orders relating to the Blount door checks should be addressed to the Yale & Towne Mfg. Co., at any of its offices, as indicated below. Respectfully,

THE YALE & TOWNE MFG. CO.
THE BLOUNT MFG. CO.

The Yale & Towne Mfg. Co. General Offices: No. 280 Broadway, New York. Warerooms: New York, Buffalo, Chicago, Philadelphia, San Francisco, Boston.

New York Hardware Club.

The following gentlemen have been unanimously elected to the Hardware Club since our last report:

Wright D. Pownall, No. 12 Park Place.
Nath. C. Tuttle, No. 336 West 84th Street.
O. S. Cockey, No. 273 Broadway.
Wm. Schlemmer, No. 209 Bowery.
Thomas Towne, No. 136 Liberty Street.
Addison C. Rand, No. 23 Park Place.
Walter S. Ballow, Providence, R. I.
Daniel Simonds, Fitchburgh, Mass.
Wm. C. Reddy, Times Building.
Robt. Slimmon, No. 96 Church Street.
Darius G. Crosby, Times Building.
C. C. Morgan, Nassau and Beekman Streets.

The Geuder & Paeschke Mfg. Co., Milwaukee, Wis., who are well known as large manufacturers of tin-wares and sheet iron goods, have been compelled to add materially to their facilities for making Coal Hods, so as to be able to cope with the ever-increasing demand for that part of their product. They make two styles of Coal Hods, viz.: the regular hod, which is fully equal to similar goods made by others, and is offered at competing prices, and their Cream City Hod, which is made from very heavy stock, and is finding much favor with dealers, who have a demand for better class goods. They also make a very nice line of one-piece fire shovels on which they are already enjoying a very good trade.

The Yale & Towne Mfg. Co.'s work termed "Stylo-Chiselry" was the subject of much comment and praise at the convention of the United Society of Christian Endeavors, recently concluded in Boston. The work in question consisted of a bronze metal tablet 28 by 26 inches, of the pledge of the society, mounted on black marble. The tablet was given by the concern as a prize, and will in the near future be placed on the market for purchase by the various societies.

The Saltsburg Rolling Mill Co., Saltsburg, Pa., have a new board of managers, as follows: S. A. Gourly, W. F. Stitt, D. U. Remaley, S. M. Nelson and John H. Jackson. The officers are: S. A. Gourly, president; D. U. Remaley, secretary; S. M. Nelson, treasurer.

Edward H. Fall, a member of a Nashville Hardware firm, committed suicide on June 24th by shooting himself through the heart.

Review of the Markets.

Hardware: The tone of the market is decidedly firm, and business is in a satisfactory condition. Some lines still show an upward tendency. Considering that this is the dull season, dealers have cause to be thankful that this state of affairs exists. Orders are large and well assorted, and the hand-to-mouth way of ordering seems to have entirely ceased. The traveling agents are doing good work. Jobbers and retailers are buying freely, and in large quantities of the lines that are expected to advance further, hoping thereby to realize a handsome profit when prices climb.

Cutlery: The domestic trade is in a most satisfactory condition, and is holding up beyond expectations. The import business is quiet.

Nuts and Bolts: There is no change in prices, though it is expected there will be as a result of another advance in the Cleveland price of iron.

Wire Nails: Since our last report prices have been advanced as expected. The quotations are now: Carload lots, $1.55 per keg, base, f. o. b., Pittsburg; less than carload lots, $1.65 per keg, base, f. o b., Pittsburg; carload lots on dock, New York, $1.70, and small lots out of store, New York, $1.80. It has of late been the practice of jobbers to buy just what quantity of nails they absolutely needed and not one keg more, consequently when prices first advanced, stocks were in a very depleted condition. Now everybody wants nails, and the mills are kept busy to supply the demand. In addition to this fact, the manufacturers of the Association have agreed to reduce the output for July, and thus give the mills a chance to shut down, to make necessary repairs. One can readily imagine how scarce nails must be.

Cut Nails: There is not so much pressure on this branch of the nail industry, though manufacturers have all the orders they can handle with promptness. Prices are as follows: Carload lots, Pittsburg, $1.30 base; less than carload lots, Pittsburg, $1.35 base. Carload lots on dock, New York, are quoted at $1.45; small lots out of store, $1.60.

White Lead, dry or in oil; Red Lead or Litharge, in kegs: In lots of less than 500 pounds, 6 cents net; in lots of 500 pounds and over, 5½ cents.

Zinc: Quotations are 4@4½ cents, as to quality and quantity for jobbing parcels.

Putty: Prices are firm at $1.45@$2.25, as to quality and style of packing.

Linseed Oil: Prices remain the same. Raw, 59 cents per gallon; boiled, 62 cents per gallon.

The prices quoted below are for small lots. Round lots, except Tobin Bronze, can be purchased at lower prices:

Clapp & Co., bankers and brokers, New York, in their weekly letter, say: "The Declaration of Independence seems more real and human liberty a larger idea, after each threatening ordeal has disappeared by use of the better argument. The tariff reformers, anti-greenback cranks, treasury looters, legislative bribers, free silver fanatics and labor brigands of the past fiscal year will now join in our annual National reminder that all of us are greater than

Digitized by Google

any. Every star will twinkle at us kindly and every stripe will waft a wave of peace as we meet and celebrate our mutual love and interdependence, and revoice the people's prayer, 'God bless us, every one.' Straws.—Government official estimates State Banks, Trust Companies, etc., own more gold than there is in Treasury of United States, National Banks and Clearing Houses. The Treasury gold reserve is now above $100,000,000, thus allowing the Treasury the right again to issue gold certificates when demanded. Russia has adopted the gold standard, and is reported as having an ample supply. It is said that the cost of producing gold is less than that of silver. Birmingham, Ala., pig iron can be delivered in Glasgow at about current quotation for Scotch iron, and at one-third less price than when protection was commenced thirty odd years ago. The Interstate Commerce Commission reports 42,000 miles of railway in receivers' hands June 30, 1894. There were 779,608 railway employees, or 93,994 less than reported in 1893. Silver advanced in January and February, while the earth's products declined; in April silver declined and the earth's products advanced. We see no relative values indicated by the price list."

THE BIRMINGHAM TRADE.

The advance of a dollar a ton on pig iron and two dollars on bar iron has produced a good feeling throughout this section. This rise was followed by an increase in the wages of the miners and furnace laborers, of whom there are about 8,000. This will keep in the district about $50,000 per month, an influence that must soon be felt in a substantial way, and has already led to an increase in trade. The price of No. 1 foundry iron has advanced $2.75 per ton beyond the price May 1st, and bar iron $8 a ton over prices of that date. These advances, so far as we know, are unprecedented in so short a time, and have the effect to make some of the more conservative think that they are going too fast, and that there is danger of breaking the market; but when we reflect that the prices of to-day are no higher than in 1893 in the midst of the panic, it then does not appear so unreasonable. Undoubtedly everyone is now keeping well up with his wants in purchases, and in some cases going even beyond, and should it become common for all the buyers to order more than they need and the trade can take, then will come the real test of the strength of the market. The practice now among the nail men, barbed wire and iron men to limit purchases to immediate specifications and for a month's supply, will have the good effect to check speculation somewhat, and keep the tone of the market firm. We are anxious that the advantage now gained may be not only firmly held, but that the tide may continue to swell until it is felt in all lines, as it is now in the chief staples of commerce. This will rob the constitutional croaker of his chief argument, that the Gold Standard has brought on all the hard times and the reductions in wages. Much of the liquidation has been completed and the return of better times will help to complete the discharge of old debts and put business on a more solid basis.

The general overhauling of lists and discounts and adjusting them to the existing circumstances of to-day means that all hands desire to turn over a new leaf and start afresh in the race for success. The success of the jobber does not depend upon having the manufacturer work for nothing, but rather that the manufacturer shall prosper, that he may feel like competing for the skill and quality of his product, rather than for price only; and the country is on the best basis where all parties are making money, the manufacturer, jobber, laborer and professional man. The nail and iron men now enjoy an enviable place when they have the buyer as a supplicant, and they deal out his allowance to him and he feels that he has been favored at that. Quite different from only a few months ago when salesmen were traveling day and night in search of some buyer who would take his product; this change all brought about by a harmonious understanding and perhaps an apparent sacrifice *at the time*, which brings a rich reward. "How pleasant for brethren to dwell together in unity." Why could this not have been done long ago?

MOORE & HANDLEY HARDWARE CO.

THE DAVENPORT TRADE.

It requires much of a typewriter's time to explain to customers the reason why goods are priced higher now than on previous invoices. In the business experience of many Hardware dealers they have heard of no advances, but have seen prices steadily decline, until the idea of paying more than before is unaccountable.

Barb wire advanced to-day $5 per ton and wire nails have again advanced, and are now selling at $1.60 from store. The advance in price of staple goods referred to in previous letters is well maintained. The sellers seem to have the advantage of the buyers in all lines of Hardware, including bar iron.

The corner-stone of our new city hall was laid yesterday with suitable ceremonies. Many substantial business blocks, beautiful residences and cosy cottage homes are being built, and the demand for builders' Hardware, especially for local trade, is good. Crops continue to promise well generally, although we need rain in this vicinity.

Business is very good indeed and collections are fair.

SICKELS, PRESTON & NUTTING CO.

[The above letter was prepared for our issue of June 25, but failed of reaching us in time for publication. That which follows was prepared for the present issue. Editor HARDWARE.]

Locally we are very much in need of rain, although middle and western Iowa report a fair amount, for the benefit of growing crops, but not enough to fill the wells, springs and creeks sufficiently for convenience in watering stock, etc. There is much anxiety with regard to the drought, as the business of the last half of the year seems to hinge on the amount of moisture we may receive during the next sixty days. We have for the first half of this year ten inches less rainfall than the normal average for the past twenty years.

The trade takes rather kindly to the recent sharp advances in staple goods, and orders are coming in regularly at the new prices. Collections are slow, as the farmers are busy, and many of them desire their retail dealers to carry their accounts until after harvest.

The contract for the Davenport, Clinton & Eastern Railway is let, and we are promised that this line will be running trains between Davenport and Clinton before next Thanksgiving day. This will give us a new railway competing for business to the East and to the great Northwest. The knowing ones predict that it is ultimately to be a part of the great Northwestern Railroad system, but of this we do not know. SICKELS, PRESTON & NUTTING CO.

THE PHILADELPHIA TRADE.

July is usually a breathing time, when salesmen are called in to have books and samples overhauled. The Fourth was, of course, a general holiday, and business is naturally slack for the first three weeks in consequence. It is gratifying to report, however, that the trade this year shows quite an improvement, and the absence of salesmen from the road is less felt by the large number of mail orders. This is a most encouraging sign, and shows that dealers are not only in need of goods, but are in nowise daunted by advancing prices. The most confirmed unbeliever in higher prices is doubtless now convinced that the new conditions have come to stay, and that the extreme prices are, after a while at least, to be a matter of history. Iron has not only advanced $6 a ton, but some brands are hard to obtain even at this advanced figure, and further advances are in prospect in many lines. The advance in wire nails is sometimes alluded to as being excessive, and whether or not it is true

Digitized by Google

that they have advanced much more than other lines, it must still be borne in mind that at least thirty cents per keg of this advance is accounted for by the rise in raw material, while it has been conceded that there is no profit in nails at the extreme figures. In other lines the advances have been notably conservative; so much so that further advances will probably follow. During the past ten days we have seen advances in planes, carriage bolts, bits, strap hinges and wringers; and several manufacturers are now working on new discount sheets, which may be expected in a few days. There is now very little fear that these advances will be extreme. Manufacturers realize that the course of wisdom is in acting conservatively, but it is absolutely necessary that prices should follow the advance in raw material, and at the same time allow a profit to all who are handling goods. Biddle Hardware Co.

THE GRAPHITE TRADE.

We have no particular boom to report, simply a steady, healthy business, which, compared with the first six months of 1894, shows a marked and satisfactory percentage of increase.

The leaders for June are Crucibles, Lubricating Graphite, Pencils and Stove Polish, in the order named.

The activity in steel and brass manufacturing has placed Crucibles at the head of the list, closely followed by a demand for Lubricants from other manufacturing interests.

All the mechanical departments are running with complete forces, and office work will deprive some of us of our usual midsummer vacations. There is still a tendency on the part of dealers to demand close figures on purchases, but at the same time quality of productions is considered, which is encouraging to the manufacturer of good goods. Payment of accounts are promptly received when due, and cause no trouble whatever.

Joseph Dixon Crucible Co.

Wright & Colton Fire.

The works of the Wright & Colton Wire Cloth Co., Worcester, Mass., were on the morning of July 3d the scene of a severe fire. The flames were on the north side, in the new addition, and originated in the blacksmith shop. The fire spread with amazing rapidity, completely gutting the building, which is 240 feet long and 60 feet wide. The fire burned only a short distance in on the old shop. The total loss is placed at $20,000 to $30,000, a good deal of the damage being caused by water. It is fully covered by insurance. The main works have been continued in operation, as the machinery was little damaged. The company say: "We are now in shape to turn out our usual amount of goods as promptly as ever. Shall immediately rebuild this building, and also put in a new brick blacksmith shop and add two stories to the main weaving building, which will give us an additional room of about 15,000 square feet."

Elsewhere will be found the card of Theodore Hiertz & Son, Montrose and Park Avenues, St. Louis, Mo. They are smelters and refiners, and furnish estimates on metal specifications of all descriptions. They are manufacturers of Nonpareil anti-friction metal, babbit metal, linotype metal, stereotype metal, electrotype metal, solder, bar tin, bar lead, cigar case seals, car seals; dealers in pig tin, pig lead, antimony, antimonial lead, copper, spelter; and buyers and smelters of ore, dross and metal. Detailed information upon any of the above points will be furnished upon application.

A ten per cent. advance in wages has been declared by Crane & Co., Chicago, manufacturers of brass goods.

Decayed teeth can now be stopped with aluminum. A process has recently been discovered.

Latest Trade Publications.

The Griswold Mfg. Co., Erie, Pa., have issued a new complete catalogue of 112 pages, bound in heavy boards, with title in silver. It is a very handy and attractive work. It contains full illustrations and descriptions, with prices, of their extensive line of goods; it is a timely publication of great use to the trade. Some special features which will attract instant attention are "Erie Spiders" (the trade mark of the company), which are plentifully scattered all over the fly leaf of the book; a blue section which is interleaved in the catalogue and contains illustrations of their full line of cast aluminum ware, most of which are entirely new goods just out for this fall's trade. In the remainder of the catalogue we find illustrations and descriptions of their regular goods, to which a number of new articles have been added. In a note of introduction the company say: "Discount sheet for this catalogue, superseding all our old catalogues and discounts, furnished on application. Stove manufacturers having voluntarily endorsed the 'Erie' Hollowware as the finest in the world, we shall endeavor to deserve a continuance of the endorsement by not only keeping up the present standard, but adding any new improvements in design and finish that will be beneficial to the ware. Every piece is examined by five different inspectors, thus insuring perfect work in each department. All goods except pots, kettles and tea kettles, packed in barrels with kiln-dried sawdust. No charges for packages or drayage."

Hall Bros. Mfg. Co., with factory at Belding, Mich., and office and salesrooms in Chicago, New York, Philadelphia and Boston, have issued a handsome little catalogue of their "Mosaic" Enameled Stove Boards. In description of these they say: "The plates used for our Enameled Stove Boards are 20 per cent. heavier than used on any other stove boards manufactured. It requires a temperature of 240 degrees to finish them, consequently the enamel is indestructible. Washing or heating will not injure the surface. The most durable, the handsomest and finest finished stove boards on the market. There will be no delay in obtaining boards of any and all sizes when ordered from our company. The season is short, and prompt shipment is necessary. Send us your specifications early and greatly oblige." Sizes and prices are given, with illustrations in colors. These are very attractive and handsome goods, and dealers who are interested should certainly see that they have a catalogue at hand for reference.

The Keuffel & Esser Co., No. 127 Fulton and No. 42 Ann Street, New York, have issued a catalogue explaining their Pilot File System, which they explain is the "ideal commercial file; binds and indexes papers at the same time; is unapproached in utility, certainty and dispatch in finding papers." The files, letter boxes, etc., and all the accompaniments thereof, are fully illustrated. The catalogue should certainly be in the hands of any one anywhere in the country who desires to add the file system to the adjuncts of the office.

The Premier Cycle Mfg. Co., Nos. 34-38 Watts Street, New York, have issued a handsome little catalogue in detailed description of their Helical Tube Premiers for 1895, listed at $100, and described as "American-made through out."

The George W. Stanley Co., Belleville, Ill., successors to the Stanley Tack Works, manufacturers of small nails, double-pointed tacks and staples, have just added to their well known line of goods a full line of Cut Tacks. They are in a position to fill orders promptly in their different lines of manufacture, and communications sent them will receive immediate attention.

Hardware costs only One Dollar a year.

Digitized by Google

Theodore Hiertz & Son, Montrose and Park Avenues, St. Louis, are selling a large amount of their Nonpariel Anti-Friction Metal to the large Hardware houses of the country. The estimate in which it is held may be judged from the fact that they have just received from John C. Kinston, Buffalo, N. Y., a manufacturer of lasts, an order for several hundred pounds. In ordering this he speaks very highly of the metal, and says that in his opinion it "is the best in the market." The company receive a great many orders and letters of this character.

The Sutton Brass Mfg. Co., Buffalo, N. Y., have incorporated. Harry C. Green is president, and Edwin L. French, A. H. Plante, George Plante and J. U. Sutton are the directors of the company.

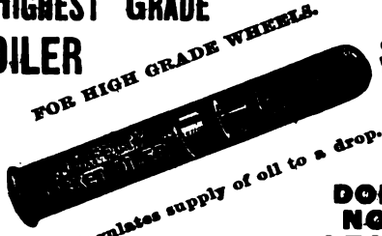
Outsider: "I hear Jones is a mighty useful man in your club."

Clubman: "Yes, he often helps make up a quorum."

Situations Wanted.

AS salesman, by a middle-aged man. Long experience in stoves, Hardware and house-furnishing goods. Understands all details. Tinner also. Will do any inside work. Location no objection. References. Moderate salary. Address "Capable," care HARDWARE, No. 143 Chambers Street, New York.

SITUATION desired by a young man who has grown up in the retail Hardware business. Experienced as buyer for export or would travel or act as foreign representative for an export house. Address J. B. B., Box 192, Caldwell, N. J.



EXPORT: A responsible, experienced man, speaking Spanish, French and German, having extensive acquaintance among exporters here and practical knowledge of the requirements of foreign markets, desires position as manager of export department of large manufacturing concern. Address "Export," care HARDWARE, No. 143 Chambers Street, New York.

Patent for Sale.

FOR SALE: One-half or whole of United States and Canada patents, recently allowed on the only Adjustable Ratchet Monkey Wrench now made. Demand great. A big winner. Address Owner, No. 231 S. Lincoln Street, Chicago, Ill.

BICYCLE TRADE RECORD.

Bicycle manufacturers and dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Companies, Stores, Etc.

Albion, Mich.—Roy Wiley is reported to be organizing a company for the purpose of manufacturing bicycles.

Binghamton, N. Y.—The Binghamton Bicycle Co. has been incorporated by Edwin L. Rose, John L. Ballard and Horatio L. Filebrown, of Binghamton. Capital stock $10,000.

Brockfield, Mass.—The Cole & Gerald Mfg. Co. reported as having added a lot of new machinery for bicycle work, including turret lathes and improved drills.

Chicago, Ill.—King B. Cycle Co. has been incorporated by Harry Berker, C. C. Stillwell and C. C. Bowersock to manufacture bicycles. Capital stock $2,000.

Chicago, Ill.—The Pond-Cottle Co., incorporated by Alexander W. Pond, Kimball H. Cottle and Henry A. Foster to manufacture bicycles. Capital stock $25,000.

Kokomo, Ind.—Steps are being taken looking to the organization of a company to manufacture bicycles.

Minneapolis, Minn. — Minneaplis Cycle Co., incorporated.

Omaha, Neb.—M. C. Doxon, bicycle manufacturer, is preparing to commence the manufacture of a high grade wheel, known as Doxon Specialist, and will turn out the first lot by the first of July.

Omaha, Neb.—Max Meyer is reported to be contemplating going into the manufacture of bicycles.

Richmond, Ind.—Richmond Bicycle Co., incorporated by M. H. Dill, George Schurman, Henry Schurman, Oliver Gaar, D. C. Reid, R. A. Jackson, L. G. Hill, W. R. Schurman, Fred. M. Curtiss. Capital stock $60,000. The company will lease a factory building of the Anderson Lawn Mower Co. and will commence manufacturing by August 1, turning out thirty wheels daily and employing seventy-five hands.

Sterling, Ill.—Edgar Galt will open a new bicycle store and make a specialty of the rental business.

Washington, D. C.—The Gendron Iron Wheel Co., of Toledo, Ohio, have opened a branch at No. 912 Pennsylvania Avenue for the sale of the Gendron bicycles, with R. B. Bond as resident manager.

Changes and Removals.

Anderson, Ind.—Strom & Craner, bicycles, partnership dissolved, J. P. Strom succeeding, and will enlarge the business. Mr. Craner withdraws to return to New Jersey, his former home.

Atlanta, Tex.—J. D. Johnson & Bros., Hardware, bicycles, etc., have been succeeded by J. B. Johnson.

Beaver Falls, Pa.—The Eclipse Bicycle Co., at stockholders meeting held June 21, decided to remove its bicycle plant from its present location, because the building now occupied is not sufficiently large to manufacture the number of wheels estimated to be necessary to supply the 1896 demands.

Dallas, Tex.—E. A. Worden, sporting goods, etc., has been succeeded by Allen & Glenn.

Dayton, Ohio.—A. W. Gump, bicycle jobber, reported to have joined business interests with Gormully & Jeffrey, manufacturers of the Rambler, at Chicago. A factory will be located at Shelby, Ind., and a medium grade wheel will be manufactured. It is stated that this departure will in no way affect the Gump jobbing interests at Dayton.

Delavan, Wis.—Parrish & Crane, bicycles, etc., reported as having been succeeded by F. A. Parrish.

Elkhart, Ind.—The Elkhart Cycling Co. sold plant to the Acme Cycle Co., newly incorporated, and the same will be greatly enlarged.

Indianapolis, Ind.—F. A. DeVore & Co., bicycles, have been succeeded by DeVore & Zinn.

Jamestown, N. Y.—Cyclone Combination Cycle Co., New York office at No. 309 Broadway, composed of Russell J. Straight, of Bradford, Pa., and Daniel H. Dorsett, of Jamestown, N. Y., has dissolved copartnership, D. H. Dorsett signing on liquidation. The company has been succeeded by the Combination Cycle Co., incorporated, the officers of which are Russell J. Straight, president; L. H. Dorsett, vice-president; William H. Bentley, treasurer and manager. Capital stock $50,000.

Los Angeles, Cal.—Allen & Patterson, bicycles, reported to have been succeeded by C. E. Patterson.

McMinnville, Ore.—A. A. Unrah, bicycles, reported as having been succeeded by F. A. Anstine.

Milwaukee, Wis.—A. B. Meisselbach, of Columbus, Ohio, manufacturer of bicycles, reported to have commenced negotiations looking to the establishment of a bicycle factory in Milwaukee.

New York, N. Y.—A. K. Hood, Hardware, bicycles, etc., reported sold out to J. Davidson, Mr. Hood removing to Portland, Me.

New York, N. Y.—J. C. Merwin has withdrawn from the house of Hulbert Bros. & Co. to give his entire time and attention to the sporting goods business, having stores already in operation at No. 1190 Fulton Street, Brooklyn, and Flushing, L. I., both of which establishments are conducted under the name of J. C. Merwin & Co., the company being F. C. Jennings, Charlestown, Vt.

Rochester, N. Y.—Fiero & Morley, bicycles, reported as having dissolved partnership — business continued by Oliver Fiero.

San Bernardino, Cal.—P. M. Peacock, bicycles, reported sold out to F. E. Allen.

San Diego, Cal.—San Diego Cycle Co. has been succeeded by George Chambers.

Waukesha Wis.—Lau & Ferguson, bicycles, reported sold out to S. J. Seabury.

New Goods and Improvements.

Brazil, Ind.—Decker & Son will erect a large bicycle factory, employing a large number of operatives.

Buffalo, N. Y.—The Queen City Bicycle Co., P. W. Pelham, president, will erect a two-story brick factory building at Idlewylde, formerly known as Gatling, and owned by the Industrial Land Co. The new factory will be 110x48 feet and will employ 200 men.

Chicago, Ill.—The Monarch Cycle Co. has awarded contract for its contemplated factory building, corner of Halstead and Fulton Streets. The building is to cost $80,000 and is to be completed by September 1st. Five hundred hands are at present employed and when the new plant is completed this force will be increased to 1,000.

Indianapolis, Ind.—The Belle Bicycle Co. are reported to have decided to commence the erection of a large addition to their bicycle factory.

Lafayette, Ind.—The Lindsay Bicycle Mfg. Co., recently incorporated to manufacture a newly patented two-speed bicycle, has contracted with the Lodge & Davis Machine Tool Co., at Cincinnati, Ohio, for an entire bicycle manufacturing equipment.

Marion, Ind.—The Halliday Temple Co., bicycle manufacturers, have recently enlarged their plant, but are reported as refusing orders, being unable to fill them.

Milwaukee, Wis.—C. J. Smith & Co. are preparing to erect a bicycle factory corner of Park and Church Streets, to cost $24,000.

Milwaukee, Wis.—J. Andrae & Sons, bicycle manufacturers, reported to be negotiating for larger factory building and contemplate extensive changes during the months of August and September.

New York, N. Y.—Horace F. Ayers, No. 114 Fifth Avenue, will build a bicycle academy corner Broadway, near the Park.

New York, N. Y.—The Anglo-American Cycle Fittings Co., at Nos. 105-107 Chambers Street, are introducing the Aurora bicycle lamp.

New York, N. Y.—The Light Cycle Co. have a large force of men working on their new building, which they hope to have completed in time for use for this year's trade.

Owensboro, Ky.—Southern Iron Works will erect additional buildings and will go into the manufacture of bicycles on an extensive scale.

Paducah, Ky.—The Paducah Cycle Works moved into new building on North Fifth Street and has added an entirely new stock of bicycles and accessories.

Philadelphia, Pa.—The Zenith Cycle Saddle Co., Disston Building, is putting on the market an improved bicycle saddle.

Plainfield, N. J.—Edward B. Ryder, at No. 306 Central Avenue, is introducing a new bicycle flagstaff, designed for carrying a flag in club colors.

Rochester, N. Y.—The Rich & Sager Bicycle Saddle Co. are having erected for their occupancy a new six-story factory building, to cost $100,000.

Recent Fires.

Davenport, Iowa.—The Davenport Bicycle Depot, at No. 221 West Third Street, damaged by fire to the extent of $200.

My dear, dear Lord,
The purest treasure mortal times afford
Is spotless reputation---That away
And wheels may be painted iron or gilded clay;
An honest cycle that has stood the test,
Is the famous one with the Humber crest·
In quality is its fame; both grow in one;
Take quality from it and its fame is gone.

HUMBERS have been the favorite Bicycles of two generations of riders. They are still the - - STANDARD.

Humber & Co., America, Ltd.,

Brock's Chain Pipe Wrench.

Curtis & Curtis, Bridgeport, Conn., manufacturers of the Forbes' Patent Die Stock, etc., are makers of Brock's Patent Chain Pipe Wrench, which is drop forged from bar steel, and in which no castings are used. They are made in seven sizes, adapted for pipes from one-eighth to twelve inches in diameter. In description of them the company say: "They combine lightness, strength and durability. The duplicate drop-forged reversible jaws are hardened to a saw temper, and may be readily sharpened by filing. When the teeth become dull the jaws may be reversed, making it practically a new tool. All parts are interchangeable and duplicates can always be obtained. The pressure of the teeth is in a line tangent to the circumference of the pipe, which combined with the encircling grip of the chain absolutely prevents crushing. They have a quick grip and never slip. Chain will not unhitch in use, but can be instantly released. They are especially adapted for use in limited space (space sufficient to admit the chain). Each number will fit a range of sizes equal to six pairs of common tongs, while it will outwear several pairs of any kind. Attention is asked to the new Patent Drop Forged Steel Safety Link. This improved method of attaching the chains removes a great defect existing in all other chain wrenches, viz.: the liability of the chain to break away from the jaws, head or handle. A double hold is given to the chain, but the reversible and interchangeable features in which this tool is unique are in no way affected." A statement as to sizes, prices, etc., will be furnished upon application.

A Substantial Testimonial.

Knoxville, Tenn., June 6, 1895. Mr. R. Givens, Corpus Christi, Tex. Dear Sir: Please ship me twenty-five cases of Sootene at once by cheapest freight, and draw on me through "Farmers' and Traders' Bank" of this city for same. I must state Sootene certainly has merit, as I gave it a thorough test by using it in my stoves and many other stoves of my neighbors, and all decided it was a success; it cleaned the pipe of soot and created a good draft. Sootene is a coming household necessity, and when once used it will be kept in every house, as no family can afford to be without Sootene.

Yours truly,
THEODORE MCSPADDEN.

American Hardware and small tools are sold everywhere in Europe. Birmingham has suffered more than any other great town from the competition of "the States." We sell in Great Britain mowers, reapers, clocks, watches, bicycles, revolvers, musical instruments, tools, machinery, and, of recent times and to a less extent, carpets and woolen goods. *New York Recorder.*

THE BERRY CLOTHES SPRINKLER
Patented.

Fills automatically and will enable you to iron your clothes immediately after sprinkling, if you so desire.
For starched clothes it is unsurpassed.
It is an excellent sprinkler for house plants.
It is capital for laying the dust while you are sweeping.
Long used carpets can be made much brighter by putting a few drops of ammonia in water and sprinkling before sweeping. Retails for 25 cents.
Liberal discount to the trade. Send for price.

THE ROYAL DOOR CHECK AND SPRING.

The Latest, Cheapest, Best.

Patented, Sept. 11, 1894.

Simple, Compact, Strong, Durable.

The ***Royal*** has a ***compressed air check.*** No liquids to freeze up or leak. Doors open easily. No back suction. Easiest attachment. Does not require a skilled mechanic to put them on. Improved ratchet for increasing tension on spring. Will fit right or left-hand doors.

PRICE-LIST:

	BRONZED.
No. 1, for Light Screen Doors	each, $2.40
No. 2, for Medium Inside Doors	" 3.30
No. 3, for Large Inside or Small Store Doors	" 4.30
No. 4, for Large Store or Vestibule Doors	" 5.60
No. 5, for Extra Large Doors	" 7.00

Packed One Dozen in a Case. Write for Trade Discounts

DIRECTIONS.

Place the shoe (S) in an upright position on the door, about six inches from back and flush with the top; *fasten securely;* slide the check into the shoe until the lugs (B) fit solid, then put in the end-screw (D). Bring arm (L) down to the transom-rail till it rests firmly, then put in the screws and the spring is ready for adjustment.

HOW TO ADJUST IT.

The thumb-screw (E) regulates the air check. A very slight turn changes the result. If the door slams, tighten it up. If it checks too soon, loosen it. It should check about three inches from the closing. If the spring is weak, increase the tension by turning up the ratchet-wheel (C) one cog. Care should be taken that the spring is not made too strong. If the spring swings the door easily, it is strong enough. Regulate the closing by the screw (E). In case that the transom-rail has a raised moulding, shorten the arm (R) by changing it into the next hole. Also, in putting the arm on the pintle, see that it is *securely fastened* and *rigid.* The checks are reversible for right or left-hand doors by simply changing the arms from one side of the pintle to the other. Follow the above directions, and the spring will give good satisfaction.

The Conroy patented New Automatic Refrigerator Door Fastener, with lock and key.

THIS FASTENER is the most complete one ever invented. The door will push to more easily with this Fastener than any in the market. The Fastener will tighten the door by the door closing. It is the most substantial; nothing about it to get out of order. By lifting the handle quarter circle the door will open, and if it sticks it will release it. It has a new and improved lock, absolutely secure. Made for flush or raised doors, composed of brass or bronze metal in any finish desired, plain or ornamental.

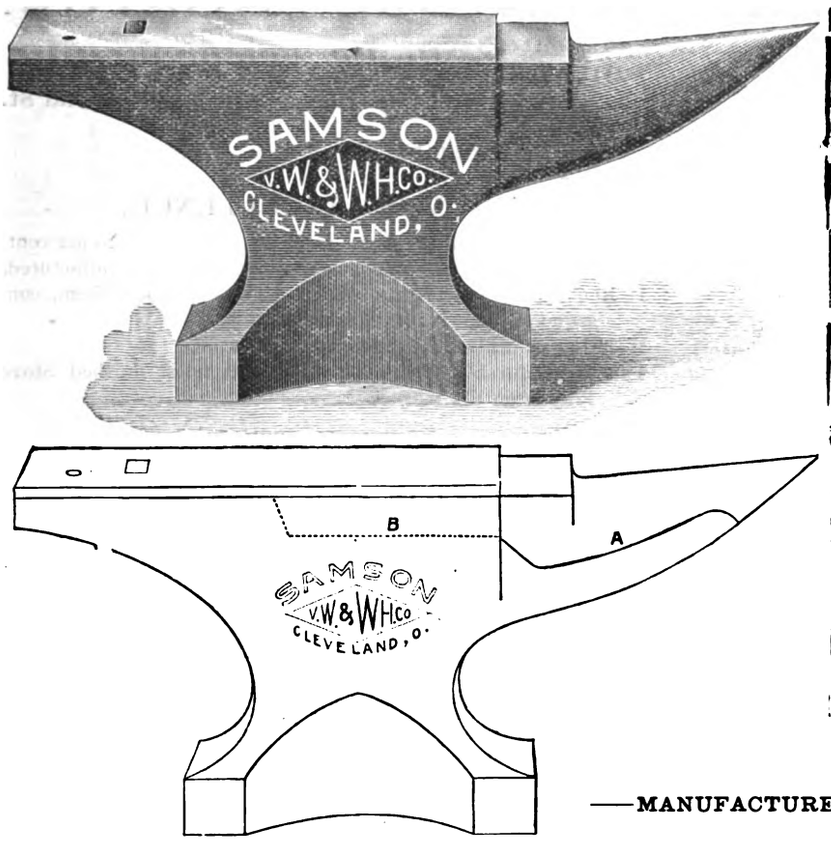
NOVELTIES IN



Brass, German Silver, and Aluminum Made to Order.

☞ *Mention "Hardware" when you write.*

A man visited Mosher, Bissell & Mather's Hardware store, West Bay City, Mich., and wanting some gasoline, went to the rear shed, where it is kept, and proceeded to draw it himself. Unfortunately, he held a lighted cigar between his teeth, and in about thirty seconds after the gasoline had been running, he found himself blown through the door. The fire blazed up brightly, but an alarm was at once turned in and the firemen soon had it out.

Digitized by Google

Samson Anvil.

This Anvil combines an unusually handsome design with great strength and a very fine temper and finish. The face is of crucible Cast Steel, much heavier than that generally used. The horn has a solid point and a facing of tough untempered steel with a long heavy shank, welded underneath to the steel facing.

The line "A" of the outline cut shows the facing of the horn and the dotted line "B" shows the shank welded to the facing plate and extending into the anvil.

The body of the anvil is of tough Cast Iron. The facings are very thick and heavy, giving strength to the anvil and solidity and durability to the parts in general use.

Owing to a novel and patented process, and skill in the welding of these heavy facings to the cast iron, we are able to produce an anvil which will successfully stand the most severe use. The temper is of the very best character, the face is true and highly polished, and the finish is superior. Every anvil is guaranteed.

We aim to furnish an anvil excellent in every respect and at a low price.

PRICES QUOTED ON APPLICATION.

"Mosaic" (TRADE MARK.) Enameled Stove Boards.

OFFICES AND SALESROOMS:

NEW YORK, 260 Canal St. | CHICAGO, 225 Fifth Ave. | PHILADELPHIA, 249 S. Second St. | BOSTON, 90 Canal St.

FACTORY: BELDING, MICH.

TO THE TRADE.

BELIEVING there is a demand for a superior line of Stove Boards and judging from the success we had last season with the "Mosaic" Enameled Board, we think it would be to your advantage to look at our samples before placing your order. We carry a full line of stock in our New York, Philadelphia and Boston salesrooms, and will be glad to answer all inquiries and quote prices.

POINTS OF EXCELLENCE.

The Plates used for our Enameled Stove Boards are 20 per cent. heavier than used on any other Stove Boards manufactured.

It Requires a temperature of 240 degrees to finish them, consequently the enamel is indestructible.

Washing or heating will not injure the surface.

The Most durable, the handsomest and finest finished Stove Boards on the market.

BRUCE & COOK,

186, 188 and 190 Water St., 248 and 250 Pearl St.,

Advertisers get results.

Digitized by Google

Just What Every Manufacturer Wants!

The Reference Book

OF THE

Hardware and Kindred Trades of the United States and Canada.

THE Book contains, in the most condensed and convenient form possible, the Names and Ratings of all firms in the following Trades in the United States and Canada:

Hardware Dealers.
Dealers in Sporting Goods, Bicycles, Firearms, &c.
Agricultural Implement Dealers.
Stove Dealers.

Sent (Postpaid) on Receipt of

TWO DOLLARS.

CERTAIN marks are printed after each name, showing the line or lines of goods handled.

The work is complete, condensed and convenient, and will be found especially desirable in sending circulars, on account of the street numbers. The ratings enable the user to select names of any specified rating or over that may be desired.

In cities the lists are classified—Hardware dealers all in one condensed list, Stove dealers in another, etc. In most cases, in the Hardware list, are specified the special kind of Hardware handled, as Shelf Hardware, Cutlery, etc.

PERSISTENT

Enterprising people are beginning to learn the value of advertising the year round. The persistency of those who are not intimidated by the cry of "dull times," but keep their names ever before the public, will surely place them on the right side in the end. Think over the persistent advertisers you know.

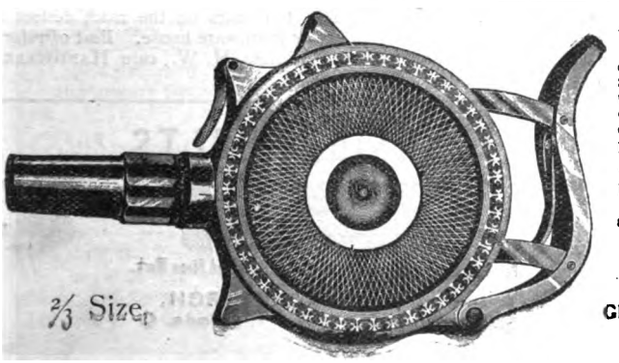
BEST AND CHEAPEST
STONE WATER FILTER
ON THE MARKET.
Tripoli Stone Block System.



Set up ready for use. There are two crocks, each of four gallons capacity—an upper one holding the Filter Block, and the lower one, which can be used as a water cooler if desired. This Block is four inches in diameter by the same in height, and is hollowed out on inside. This fits on a metal tube, which fastens by means of a nut to bottom of Filter Jar. Block can be lifted off tube, cleaned and replaced in two minutes, and with no trouble at all. Water passes from outside of block, through the walls, into the hollow chamber, and from thence, by the means of the Drip Tube, into the lower receptacle.

The Finest Piece of Salt Glazed Stoneware Ever Offered the Public.

F. H. WEEKS - AKRON, OHIO.

"PROTECTOR" REVOLVER.

A New Departure in Small Arms.

COPY OF LETTER.

SPRINGFIELD, OHIO, February 21, 1895.

IRWIN AUGER BIT COMPANY, Wilmington, Ohio.

Gentlemen:—We send by same mail one of your Machine Bits, which, without dressing or handling in any way, has bored 57,000 holes 4 1-2 inches deep, and is still good. It has such a record that the party felt you would be glad to know it. Yours, etc.,

THE SPRINGFIELD HARDWARE CO.,
Per Wiseman.

Buffing Wheels,

STANDARD GOODS AND SPECIALTIES.

The quality speaks for itself. We have the only plant in existence devoted exclusively to the manufacture of a full line of High Grade Buffing Wheels. Our Catalogue is an ornament to any office; a postal card secures it. "The quality controls the price."

DIVINE BROTHERS,
CHADWICKS, N. Y.

NOTICE.

GENTLEMEN:—On and after March 1st, the business heretofore conducted by me will be continued by a Company, to be known as

The Estey Wire Works Company.

Thanking you for favors received in the past, I bespeak a continuance of your patronage under the new organization and trust that the same pleasant relations existing between us may be continued.

Yours truly,

W. S. ESTEY.

As above announced we have succeeded to the business of W. S. ESTEY, and trust that we will merit a continuance of your valued orders as heretofore extended to Mr. W. S. Estey.

Yours truly,

ESTEY WIRE WORKS COMPANY
March 1, 1895. 65 Fulton St., New York.

ORANGE SPORTING POWDER, MANUFACTURED BY LAFLIN & RAND POWDER CO.

ORANGE RIFLE EXTRA, ORANGE SPECIAL, ORANGE DUCKING, ORANGE LIGHTNING.

The attention of TRAP AND FIELD SHOOTERS, RIFLEMEN AND DEALERS IN GUNPOWDER, is called to the new ORANGE SPORTING POWDER, patented April 17th, 1888, and branded **ORANGE RIFLE EXTRA.**

This Powder is quick and strong, and burns with such perfect combustion that the only residum left in the barrel after shooting is a dark oily substance easily removed While this Powder is not exactly SMOKELESS, it gives only a light bluish smoke, which is almost instantly dissipated, and interferes but little with the shooting of the second barrel, taking the place of the so called smokeless powders in this respect.

This brand of powder sells at the same price as any other brand of Rifle Powder and is superior to any made. No person who shoots can afford not to give it a trial, as after once trying it he will never use any other Powder when he can obtain the ORANGE EXTRA. Weight and quality guaranteed.

MILITARY, MINING AND BLASTING POWDER.

LAFLIN & RAND POWDER CO., - 99 Cedar Street, New York City.

PLACE THE MATTER CLEARLY.

To make a man realize an idea as you realize it, is what is necessary to make him understand his needs. Advertisements should aim to place a matter so clearly before the public that they see it as clearly as the advertiser does.

Digitized by Google

IT TAKES A PULL

to separate the plies of our rubber belting. A yoke of oxen can do it, but hard service won't, so strong is the friction. Our belting is uniform in width and thickness, consequently more of its surface comes in contact with a pulley. That means

NO WASTE OF POWER.

Rubber belting is never injured by water, hence it is best for out-door use, for wet localities, and for mills where the atmosphere is surcharged with moisture or steam, as in paper mills, tanneries, etc. Buy the durable kind, branded 1846-Para, Double Diamond or Carbon, made for 50 years by the

The PUTNAM Hot-Forged and Hammer-Pointed Horse NAILS

Are made in Sizes and Styles as below:

TURF NAILS, Nos. 1 to 5.

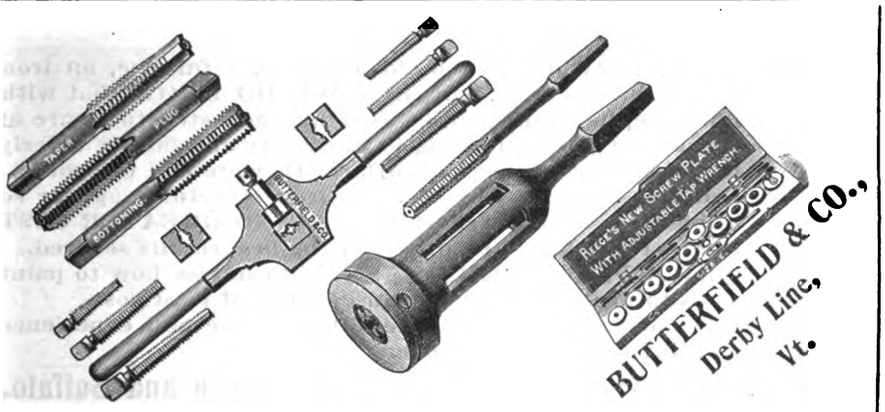
FRENCH HEADS, for punched shoes without creases, Nos. 3 to 7.

REGULAR HEADS, Nos. 5 to 14.

CITY HEADS, for shallow creased shoes, Nos. 5 to 9.

COUNTER HEADS, or FROST NAILS, Nos. 5 to 9.

Prices of these styles are the same as for Regular Heads of the same size.



The **only** Horseshoe nails in the world made precisely the same as the old-fashioned, hand process, being exclusively **Hot Forged and Hammer-Pointed.** This **hammering** (not pressing, rolling or shearing) while the metal is at welding heat blends all the particles into a compact, firm nail that outwears all others and will **Never Split, Sliver or Break.** *They are not sheared but have smooth edges clear to the point.*

The attempts of other manufacturers, in their advertising, to identify their product with the Putnam Nail leads us to state that the PUTNAM NAIL is made SOLELY by us in the ONLY RATIONAL WAY a GOOD horsenail can be produced.

Nickel-plated Mascot Ring for 10 Cents in Stamps or Silver.

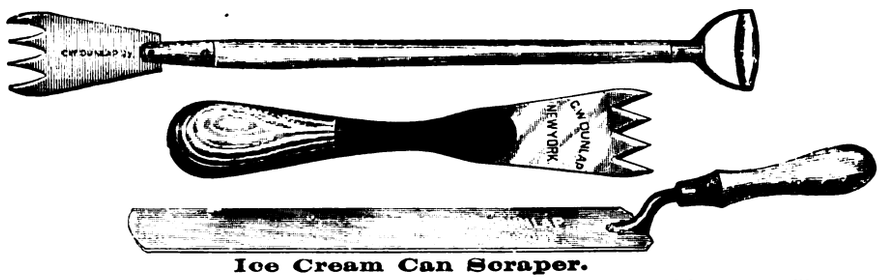
TIME WILL TELL.

A constant dropping will wear a rock. Keep dropping your advertisement on the public through

HARDWARE,

and they will soon melt under like rock salt.



We do not know how to build a bridge, a furnace, an iron roof or a bessemer plant, BUT WE DO KNOW that with few exceptions the paints used on such structures are of the lowest grade, lacking in durability and failing utterly to preserve from rust the surfaces they pretend to protect; and this explains why so many iron structures appear so dilapidated in such a short time. AT NO GREATER COST the best paint may be used and the best results secured.

OUR SPECIAL BUSINESS is to advise how to paint so as to protect, preserve and beautify at least cost.

We place at your disposal our knowledge and experience and invite correspondence.

BLAKE & JOHNSON,
WATERBURY, CONN.

American Lead Pencil Co.,

429 Broome Street, New York.
110 Cheapside, London, England.

113. "CARBON" PENCIL.

TO obviate that tired feeling and dull pain in the fingers, which invariably accompany the use of the ordinary black lead pencil whenever too much pressure is brought to bear or it is used any length of time, and at the same time to produce an article that is very smooth, very black and very firm, thus adapting it for all kinds of work where a fine, smooth, black and legible mark is required, this pencil cannot be too highly commended. For writing on soft paper it surpasses anything heretofore produced; and for sketching, draughting and heavy shading it is indispensable.

Dozen mailed on receipt of 50 cents. Samples, Catalogue, Information upon Application. Address

American Lead Pencil Co., 429 Broome Street, New York.

SCALES, PLUMB-BOBS, THUMBTACKS, &c.

The AMERICAN WICK is made on scientific principles. The gum inherent in the natural cotton is taken out, and no expense is spared to produce a wick that will give THE GREATEST ILLUMINATION.

THE
AMERICAN WICK
Made by the
WICK DEPARTMENT
Of the STANDARD OIL CO. of NEW YORK.

Oil drawn up through the AMERICAN WICK burns with a large, clear, white light and the flame does not drop off in size as it does when a poor wick is used. When the cotton is clogged with its natural dust and gum the full illuminating power of the oil is not obtained and the complaint is heard that the light DROPS.

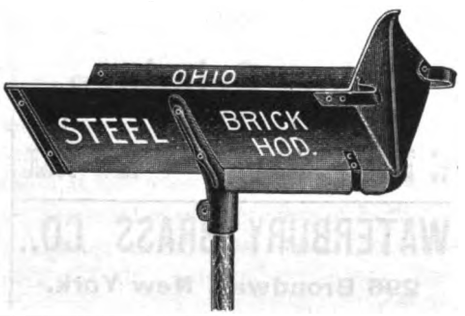
OHIO "WATER TIGHT"

STEEL MORTAR and BRICK HODS



OHIO "Water Tight" Steel Hods are from 25 to 50 per cent. lighter when in use than the common wooden Hod.

Ohio "Water Tight" Steel Hod bodies are positively Water Tight. These bodies are the only ones made, folded from a single piece of sheet steel without cutting the metal, are reinforced on the edges and at the dumping point By our special devised machinery we are enabled to furnish the strongest, lightest, most durable and only double end mortar and brick hods offered to the trade.

Our improved Malleable Iron Fork and Wooden Shoulder Saddle make it easier for the user to carry, or to attach a piece of cloth, should he so desire, to the under side of the saddle than the old style.

With our improved one piece Malleable Iron Fork and socket for holding the hardwood handle and taking up the shrinkage, a broken handle can be readily replaced, and hods shipped knocked down.

Reasonable and Unreasonable Competition.

During the past few days we have had the presidents of many of our great railroads in session at New York to try and devise a plan which will keep them all from going into bankruptcy, as many roads have already done.

Not every student of economic questions appreciates how enormously competition has been increased by steam, electricity and machinery. In the beginning there was a fear in the minds of many that the aggregations of capital necessary to economically apply these great forces would result in monopoly and higher prices to the masses, but experience has shown that, instead of abolishing competition, it has lifted it to a higher plane and intensified its force. This is illustrated by all the great branches of production and distribution. Railroad rates have steadily declined in the face of combinations and consolidations until the people of the United States to-day secure their transportation at about half the rates of other principal commercial nations. The last report of the Interstate Commerce Commission says: "Comparing the amounts received by the railways for transportation with the amounts they would have received on the volume of traffic carried from 1889 to 1893 if the average receipts per mile in 1888 had been maintained during the subsequent five years, the public would have paid for freight and passenger transportation by railroads, from 1888 to 1893 inclusive, $525,459,587 more than was actually paid for such transportation during that period." The same report shows that railroad stock of a par value of $2,859,334,000 or 61.24 per cent. of the total stock of all railroads of the United States paid no dividends last year, and that mortgage bonds amounting to $492,275,999 and income bonds amounting to $204,864,269 paid no interest. In other words, extreme, *unreasonable* competition has left investors, to this extent, without income, for the benefit of shippers and the public. All fair-minded men will admit that this is an injustice to the people who paid their money to furnish transportation facilities for the public, and that it is a striking illustration of the result of unreasonable competition. Yet some persons are not satisfied; they oppose pooling and even advocate Government ownership and operation of railroads.

Everything unreasonable is accompanied by unjust discrimination; hence the necessity for the adjustment of everything on a *reasonable* basis.

When the Sugar Trust was formed in 1887, it was thought by many that the public would probably be compelled to pay higher rates for sugar. Granulated at that time was selling at $6 per 100 pounds. For the first three years prices were somewhat higher owing partly to crop conditions and partly to refiners obtaining a better margin of profit; but since that time prices have steadily declined, until to-day granulated sugar is selling at $4.44 per 100 pounds, after paying an import duty of 40 per cent. *ad valorem* on the raw, and both refiners and distributers are making a fair profit. Before the Trust was formed an era of unreasonable competition had reduced the profits of both refiners and distributers to *nil*, and had actually bankrupted or driven out of business a majority of the refiners.

The Standard Oil Co. has for many years exercised a controlling influence in the petroleum industry, and yet the price has steadily declined from 35 cents a gallon in 1867 to 21 cents in 1877, 7.8 cents in 1887, 5.24 cents in 1893, and 5.18 in 1894. Owing to diminished production the price is now tending upward, the bulk price in New York now being 5.95. A reasonable competition has been maintained during the entire period, but the business has been so concentrated that it could be handled intelligently and economically, with the above results. Indeed, for the economical handling of any branch of production or manufacture, concentration of management is absolutely necessary. Without it, expenses of doing business inevitably result in high prices to the consumer. This is strikingly true of gas companies, and an illustration of it is seen in the baking powder business at the present time.

There are three principal manufacturers of high class baking powders, besides numberless small ones who make baking powder of all kinds and qualities. Each of the three leading companies maintains a large and expensive plant and staff of employees, and expends hundreds of thousands of dollars each year in advertising. It is safe to say that if the business of these three companies could be unified, one-half of the existing expenses could be saved, with benefit alike to manufacturers, distributers and consumers. The price of pure cream of tartar baking powders has been kept high by the enormous expenditure attending their

Digitized by Google

manufacture and sale; and the trend towards lower prices will sooner or later compel a reduction in the price of this class of baking powder.

In the case of this article, unreasonable competition, with its attendant expenses, has had the effect to keep prices high to the consumer, while reasonable competition, with a concentrated and economical management, would have resulted in lower prices.

The present is manifestly an age of reason, and the logic of events, coupled with intelligent presentation of them, will steadily tend to dispel the prejudice in the minds of people who always have been quick to hail with delight any competition, no matter how unreasonable, and who have heretofore been prejudiced against the organization of industrial forces.

Free Cartage and Boxing.

This subject, so often discussed among Hardware merchants, in association gatherings and in the trade press, has come to the front for new attention, in view of the facts stated below:

The Simmons Hardware Co., St. Louis, make special announcement that they "are making no charge for package and cartage."

The Lockwood-Taylor Hardware Co., Cleveland, make this statement under date of July 10th: "Hereafter we shall deliver all goods at depot or boat without charge for boxing or cartage."

In the *Wisconsin*, of Milwaukee, of July 10th, the following item appears: "The Pritzlaff Hardware Co. has taken a step in the interests of its customers which, while it will be a very nice thing for the latter, it means a loss of many thousands of dollars annually to the Milwaukee company. Heretofore the Pritzlaff, like all other wholesale Hardware houses throughout the Northwest, has charged a minimum price for cartage and boxing of all goods shipped or handled by the company's teams in this city. These charges represented the actual cost to the company of such work, which has been added to the bills of the customers, the total amounted to from $3 to $5 per day for each one of eleven draying teams constantly in use by the Pritzlaff concern. Beginning July 15th these extra charges are discontinued, the company boxing and delivering all goods it ships to customers free. This is the initial move in the Hardware trade, Chicago dealers still charging the regular amounts for this work. It is probable that the big concerns of the same kind there will be compelled, for self-protection, to adopt the Miiwaukee plan. Milwaukee wholesale grocers adopted the same plan about a year ago, and it is still in vogue."

A Protest Against Convict Labor.

EDITOR HARDWARE: Yours is at hand. Goods like ours are largely made by convict labor, and while we have a territory in which, on account of quality, we cannot be dislodged, we cannot reach out in all directions, on account of the competition with "jail-bird" products. On the principle of calling sinners to repentance, and not the righteous, we can receive no benefit from extra labor upon a trade we hold already, while to put our prices on a plane with twenty-six cents a day convict labor, means to sell the goods at far below cost. The amazing stupidity of our law-makers in promising protection to labor, while at the same time virtually entering into a conspiracy to down honest labor and shut the doors of the manufactories who pay taxes to keep up the government, is only intensified in contrast by the zealous care of monarchial governments for their labor. You have but to step from this country into the Queen's realm, Canada, to find that anyone bringing convict made goods into that country, is jailed. And yet we preach protection to American labor! The most astounding part of the whole matter is, that the heads of labor organizations, while demanding increased pay for labor, will not turn a hand to stay the convict system which causes so many men and children to go hungry. The secret of the whole matter is that the contractors of convict labor are politicians, and are so linked with the powers that be, that it is a herculean task to dislodge them. Imagine a State furnishing buildings and labor at twenty-six cents a day, and then wanting capital to put up its own buildings, pay taxes and employ men at $1.50 to $3.50 per day! This is statesmanship with a vengeance. This prison octopus affects us all, and the sooner honest labor is lifted up from the scourge, the better for all. Yours truly,

Burlington, N. J., July 12, 1895. STUART & PETERSON CO.

Dedicated to Mr. Nutting.

It is not often that a Hardwareman has the honor of having a real story book dedicated to him. Such, however, has been the lot of James R. Nutting, of the Sickels, Preston & Nutting Co., of Davenport, Iowa. That Mr. Nutting himself is an expert in the use of a pen, need not be stated to those who have had the pleasure of reading his letters in the columns of HARDWARE from time to time.

The work above referred to is a new novel entitled "Roberta," by Blanche Fearing, who has already given to the world "In the City by the Lake," "The Sleeping World," etc. The book itself is a strong and imaginative statement of a great many social facts of supreme importance, with suggestions as to the solution of the same. The scene is laid in Chicago. Miss Fearing is a lady of some twenty-six summers, who has been compelled to struggle against adverse circumstances, in making her way in the literary world. She was born of poor parents, and is almost blind, but with all these disadvantages, she has quite a good education, and has also studied for the law and been admitted to the bar. She is a member of the bar of Chicago, and is licensed to practice in the Supreme Court of Illinois. She has written several books of poetry, which have been received with favor. Mr. Nutting gave her substantial assistance in getting out her first book, and helped her in other ways, and it is as a mark of appreciation of these kind services, that she has dedicated to him her latest and strongest work.

Hardware Association Meets.

The Mississippi & Missouri Hardware Association held its annual meeting July 9th in the Hotel Lafayette, Lake Minnetonka, Minn. A score of representatives attended. Routine business occupied most of the session, and on Wednesday the members visited Duluth in a body, where they were hospitably entertained till Friday, when they wended their way homeward. Among those present prominent in Hardware circles were: C. H. Bigelow, Jr., St. Paul; Horace Hill, Minneapolis; C. W. Hackett, St. Paul; J. W. Conchar, Dubuque; Robt. Donohue, Burlington, Iowa; Walter Schenck, Burlington, Iowa; S. H. Harper, Ottumwa, Iowa; W. H. Kalboch, Oskaloosa, Iowa; Geo. T. Sprague, St. Joseph; H. J. Lee, Omaha; C. A. Knapp, Sioux City; and T. J. Fernley, Philadelphia, representing the National Hardware Association; and Wm. P. Bissell, representing the Consolidated Steel & Wire Co., Chicago,

The National Convention of Stovemounters recently in session at Evansville, Ind., have elected James McGinn, of Detroit, president; A. A. Warner, of Wayack, Mich., vice-president, and Charles Streithoff, of Evansville, secretary. The 1896 convention will be held at Chicago.

The Continental Stove Works, and the Grander Stove Co., Royersford, Pa., have resumed operations.

Death of John H. Graham.

Hon. John H. Graham, the well-known and highly esteemed senior partner of the Hardware firm of John H. Graham & Co., No. 113 Chambers Street, New York, passed away, at his residence, No. 663 Lafayette Avenue, Brooklyn, on July 11th, at 10.15 P. M., after being in ill-health for some time.

Mr. Graham was born in Belfast, Ireland, on April 1, 1835. His father, General Samuel Graham, who came from Belfast when the boy was three months old, was prominent in business and public affairs of Brooklyn until his death in 1884. The son attended Public School No. 4 on Classon Avenue when Samuel C. Barnes was principal, and for five years was apprenticed to an architect and builder. This business was not exactly to his liking, and in 1854 he went into the Hardware trade, in which he was engaged up to the time of his sickness. For seven years he served in the New York State militia, and when the war broke out he organized and was made captain of Company A of the Fifth New York Heavy Artillery, of which his father was colonel. Promoted to the rank of major, he was soon afterward breveted lieutenant colonel for gallant and meritorious conduct at Harper's Ferry and in the Shenandoah campaign.

Taken prisoner in 1862, he was paroled and later exchanged. A few months before the close of the war he entered the employ of Hotchkiss, the inventor of the machine gun. In January, 1870, he went into the wholesale Hardware business. Of late two of his sons were associated with him, the firm being John H. Graham & Co., and the place of business No. 113 Chambers Street, New York. In 1857, 1858 and 1859 Mr. Graham was deputy commissioner of repairs and supplies. He was for seventeen years a member of the Democratic general committee. Mr. Graham married Miss Annie Oliver, a daughter of John Oliver, of Brooklyn.

In 1892 he was elected congressman from the fifth district of Brooklyn and also nominated a presidential elector, but declined the honor because his eligibility to serve was questioned, he at the time being a National bank director. Mr. Graham was one of the trustees of the East Brooklyn Savings Bank, and until quite recently a director of the National Shoe & Leather Bank of New York, also a director of the Port Jervis & Monticello Railroad. He was a very active worker in the interests of charity, being intimately connected with the Association for Improving the Condition of the Poor. He was a member of the New York Hardware Club, the Loyal Legion, the George C. Strong Post, G. A. R., and of the Bushwick Club. In business circles Mr. Graham achieved an enviable reputation. He was the representative of the Hardware Board of Trade in the World's Fair commission of 100, and was named one of the incorporators in both the state and national bills. Associated with Mr. Graham were his two sons, William A. and George A., who compose the firm of John H, Graham & Co.

The funeral service was held at eight o'clock Sunday evening, July 14th, in the Puritan Congregational Church, Lafayette and Marcy Avenues, Brooklyn.

Why Called Whiffletree?

In a personal note to the editor of HARDWARE, Mr. Nutting, of Davenport, Iowa, makes this suggestion: "While you are in the mood for asking derivations of names for Hardware, how would it do to find out why a Whiffletree is called a Whiffletree, and why the same article is sometimes called a Swingletree and sometimes a Singletree, and also ask which is correct. I have also heard single Whiffletree and double Whiffletree."

The suggestion is a good one. If any one can throw light upon these points, we will be glad to hear from him.

The American Axe & Tool Co. recently held its annual meeting in Newport, Ky. The following Board of Directors were elected by the stockholders: C. W. Hubbard, Chas. W. Mackey, James H. Mann, W. T Norton, G. T. Lane, H. G. Bixby, C. W. Hubbard, Jr., A. C. Mann, F. E. Mann, Chas. H. Wier, F. Q. Barstow, S. A. Rankin, F. T. Powell, Ethan Rogers and H. Knickerbacker. The board was then organized and the officers for the ensuing year named. They are as follows: C. W. Hubbard, Pittsburg, Pa., president; George T. Lane, Troy, N. Y., first vice-president; H. G. Bixby, Nashua, N. H., second vice-president; James H. Mann, treasurer, and F. M. Sterrett, New York, secretary.

New life has evidently been infused into the Cleveland Chamber of Commerce, which fact is manifested by the handsome forty-seventh annual report which we have received with the compliments of President Wilson M. Day. A glance at the membership list proclaims the fact that the commercial future of Cleveland is in safe hands. The roll bears the names of those best known to the manufacturing, professional, literary and legal worlds of the great city of Cleveland. May the good work continue.

A committee has been formed in Genoa, Italy, to organize a congress of engineers and architects to be held in that city in the autumn of this year. The congress will be divided into the following sections: Hydraulic engineering, architecture, sanitary engineering, bridges and roads, railways and tramways, naval architecture and general mechanical engineering, electrical engineering, mineralogy, metallurgy, and industrial chemistry, geodesy and agricultural engineering, military engineering, and technical education.

James C. Lindsey, of the J. C. Lindsey Hardware Co., Pittsburg, died on Thursday, July 18th, at Meadville, Pa., where he was undergoing medical treatment. He was the vice-president of the Hardware Dealers' Association, and had been well known in that line of business in Pittsburg and its vicinity for thirty years past. He was a Mason, and fifty-one years old. His widow survives.

There is shown in London a pair of small pocket scissors which do duty for cigar and flower cutter, gas pliers, ordinary pliers, wire cutter, coin tester, paper knife, nail knife, screwdriver, railway key, a pincer, and a three-inch measure.

Alderman Walkley is Honored.

The Hardware trade learned some time since that Hon. Webster R. Walkley, of the Peck, Stow & Wilcox Co., had been elected to the Board of Aldermen of Brooklyn. That he has been an able and faithful member of that body goes without saying. An evidence of that fact is found in the following extract from the proceedings of the board on July 15:

On motion of Alderman Hess, S. S. Butler, a citizen of the Twentieth Ward, was allowed the privilege of the floor, and was permitted to stand on the platform and make a brief address. He held in his hand a small morocco case. The address was as follows:

"Alderman Walkley, you have a great many friends, both in your own ward and in the other wards of your aldermanic district, who have watched your course and your record on the various public questions which have come before this Board during the past eighteen months with satisfaction, and with considerable pride in the representative of their district, and who, appreciating your labors in behalf of an economic administration of public affairs, together with your cordial and hearty support of this Republican administration, desire to present you with this badge as a slight testimonial, in consideration thereof, as well as a token as their regard for you. In after years, as you look upon this symbol of your office, we trust you will recall with pleasant remembrances your many friends who have honored themselves in thus honoring you."

Alderman Walkley, who seemed taken wholly by surprise, sat in his seat for a few moments while Mr. Butler was speaking, but soon arose and passed around to a point near the speaker, where, with bowed head and evidently much moved, he listened to the gentleman's closing words and extended his hand to receive the badge. It was of solid gold, plain, with black enameled lettering on the front, reading "Webster R. Walkley, Alderman, City of Brooklyn, 1894-1895." On the back were these words: "Presented by his constituents to show their appreciation of a faithful official, July 15, 1895."

There was applause on the floor at the moment of the presentation. Alderman Walkley hesitated a few moments and then made a brief acknowledgement, speaking in low tones and a voice that trembled a little. He said: "I heartily thank you for the kind words you have spoken, and I thank also the generous donors who have seen fit to make this presentation. It has always been my aim in life to be governed by that highest rule, 'to do unto others as I would have them do unto me.' I have voted on all questions as my conscience has approved. If in thus voting I have pleased my constituency I am very thankful. Please take to them my hearty thanks and assure them that I shall always do right as God gives me to see the right."

In comment upon this pleasant incident the Brooklyn *Standard-Union* says:

"The Board of Aldermen yielded the floor again yesterday, in order that a citizen of the Twentieth Ward, in behalf of many friends and admirers of Alderman Walkley, might present that gentleman with a modest testimonial of their appreciation of his record as a public official. It was a pleasing interlude in the monotony of routine proceedings, and it will gratify many friends of Alderman Walkley who have not the pleasure of his personal acquaintance but who, interested in reform movement, watching his course in the Common Council, have acquired a sincere esteem for him. They will be pleased to learn that combined with his earnestness and uprightness of character, his cultured mind and his steadfast loyalty to Republican principles, all of which show in his public career, he is privately a genial, refined gentleman, modestly and worthily exhibiting Christian graces of character that show no trace of cant or Phariseeism."

Michigan Hardware Association.

The meeting of the Hardwaremen of Michigan at Detroit on July 9th for the purpose of forming a State association was crowned with success, and another great Hardware association has been added to the steadily lengthening list.

The gathering was held at the Hotel Cadillac, and the attendance was very encouraging, some seventy-five firms being represented. The meeting was called to order by Frank S. Carlton, president of the Carlton Hardware Co., Calumet, who has taken so active a part in the advancement of the idea of an association. He was chosen temporary chairman. A discussion ensued upon various points of interest to the trade, and there was no question as to the wisdom that lay in association.

The meeting extended into July 11th. The name chosen was the Hardware Association of Michigan. One meeting is to be held in July of each year, a special one being set for the second Wednesday in February, 1896, at Saginaw. The admission dues were set at $3 per year and the annual dues at the same amount. Any who join before January 1st, 1896, have the first year's dues omitted. The following efficient corps of officers and committees were elected:

President, F. S. Carlton, Calumet.

Vice-President, Henry C. Webber, Detroit.

Secretary and Treasurer, Henry C. Minnie, Eaton Rapids.

Executive Committee, ex officio, F. S. Carlton, Calumet; Henry C. Webber, Detroit; Henry C. Minnie, Eaton Rapids; for two years, Charles F. Bock, Battle Creek; T. A. Harvey, Saginaw; for one year, Edw. A. Moye, Marquette; J. B. Sperry, Port Huron. Investigating Committee, for one year, W. J. Boyce, Port Huron; S. P. McDonell, Bay City; T. Frank Ireland, Belding.

The following resolutions were adopted:

Whereas, Our president, Mr. F. S. Carlton, has been directly instrumental in the organization of the Hardware Association of Michigan; therefore, be it

Resolved, That a vote of thanks be extended to him for his untiring efforts in this direction.

Whereas, the various Hardware journals of the United States have extended the favor of their co-operation in forming the Hardware Association of Michigan; therefore, be it

Resolved, That a vote of thanks be extended to them for their efforts in our behalf.

Whereas, The Hardware Association of Michigan has been organized in Detroit, Michigan; therefore, be it

Resolved, That the secretary of this association be instructed to notify all the Hardware journals of the United States of the action taken and that they be requested to insert a notice of the same in their publications.

Resolved, That a cordial invitation be and the same is hereby extended to all regular and legitimate Hardware men of Michigan to join with us in this association and remit to the secretary the amount of dues and membership fee and receive their certificate of membership.

WM. T. HEBBARD, Lansing;
CHARLES F. BOCK, Battle Creek;
EDWARD A. MOYE, Marquette;
Committee on Resolutions.

Wm. Pike, Jr., so long connected with the Brady Mfg. Co., and for the last two years as their superintendent, has resigned, and is now taking a much needed rest. Cluf Tyberg, M. E., so long and favorably known as a practical and theoretical designer and the constructor of many automatic and other labor-saving machines, has recently acquired an interest in and accepted the position of superintendent of the Brady Mfg. Co., of No. 83 Washington Street, Brooklyn, N. Y., where he will be pleased to serve his friends and patrons.

CONFESSIONS OF AN UNSUCCESSFUL CLERK.--IV.

The first endeavors permitted me in the way of selling goods, were in connection with the calico counter.

This was located to the right of the main entrance, and the critical dame or cautious girl who came in search of bargains, had from seventy-five to one hundred pieces and patterns from which to make selections.

The caller would peer into the store with an investigating air, and in nine cases out of ten--whether looking for calico or hoop-skirts—steer straight for that counter. Perhaps I have employed the wrong word in the above—drifted up against it, would be the more exact term. Conversations would open in something like this form:

"Good morning, ma'am."

"Good morning."

"Looking for something in the line of calico, this morning?"

"Well, I dunno. Jest lookin' around. What are you chargin' for Merrimac?"

The price would be named, the clerk meanwhile hauling forth the most attractive patterns, and opening them out to the best advantage.

Nine out of ten of our visitors were Yankees from the country. Eight out of these nine were suspicious of the town, the store, the proprietors, the clerks, the goods and the prices. They knew by long experience that the price asked was not always the one taken; that haggling, offering, and reducing were ever in the order of things; and much practice had made them past-masters in the art of beating down.

A dozen pieces would be slowly examined without a sign of emotion, except such as implied a general mistrust and unyielding criticism.

"How much did you say this was?"

"Twelve cents a yard."

The burden of war prices was yet upon the cotton market.

"Twelve cents! Lands' sakes. They are selling them for ten cents at Smith's."

"Not Merrimacs, I guess. We have the cheaper brands for that. Here are some at ten."

"Yes they were Merrimacks. Well, I'm only lookin' around. Don't know as I want any. Still, I might take a dress off that pink, if I could get it at ten cents."

When this sharp current in bargaining first caught me, of course I made haste to Mr. Samson for a sailing chart.

"Let her have it for eleven cents, Henry," said he. "Try to get that; but if she won't pay it, take the ten cents. Then work her down toward me, and I may be able to sell her a pretty big bill. She generally commences that way. But don't let her go out of the store empty-handed, if you give her a dress."

(The one unpardonable sin was to let a caller get away without a sale.)

It is needless to say that this superior experience against which my newness was matched, was too much for me. The eleven-cent compromise was refused, and she took her ten yards for a dollar.

She greatly appreciated the money saved, for shillings do not grow upon the bushes upon Northern Ohio farms; but the pleasant gleam behind her glasses, showed that twofold greater was the pleasure derived from getting ahead of "one of them sassy clerks."

I coaxed her gently down the counter, and left her in the hands of the genial but seasoned Samson. There came to me then a revelation in the ways of barter. There was genius in the way in which goods jumped in price when she approached them; and her joy in getting them down within reach of her offer, was only matched by Samson's quiet happiness in getting, in most cases, the full regular selling price. I was, indeed, convinced that genius has its rewards, as I carried, late in the afternoon, several huge bundles from the store to her wagon across the street.

I do not defend this method of dealing. It belonged to the order of things in Grange, and as such was generally accepted. There was one store in the vicinity that made and lived up to a rule of:

ONE PRICE ONLY: NO TRUST.

It soon went into the hands of an assignee. The people regarded the first named feature as an encroachment upon their liberties, while the "No Trust" was taken as a reflection upon their financial reliability.

We had some customers from a small iron-making town a few miles away, the majority of whose inhabitants were Welsh. There seemed to be but one way of dealing with them.

The stalwart mother would enter, thump her baby down upon the counter, and open the campaign.

"I want to see some of your dress goods."

Plain muslins or substantial woolens would be unrolled before her. We will suppose that the selling price was marked at thirty cents per yard.

She would select a piece that suited her.

"How much is that a yard?"

Knowing his customer, the clerk would say: "Forty cents."

"I won't give it. I'll give you twenty."

Then followed a season of argument, expostulation and good-natured chaffing.

"Take it along for thirty-five cents."

"Never in the world. I'll give you twenty-five."

Then another season of mercantile diplomacy. The baby would be gathered up, as a preliminary to departure. Then a halt, and more negotiations; and in the end she would take the goods at thirty cents. She was happy because she had compelled the clerk to come down ten cents per yard; and he was happy because he had made a sale at the regular figures. If he had asked her thirty cents in the start and stuck to it, some other clerk up the street would have sold her the dress.

One thing that Samson & Crown would not permit, and that was misrepresentatian of their goods. A thing must be sold for what it was, upon its own merits, and full weight or measure given. Both men were honest, truthful, and exact, and if a mistake had been made, took pleasure in making it good, no matter what the cost.

Some of the merchants of Grange were constructed after a different plan. I shall never forget a series of calculations made in my presence by a cynical clerk employed in another store.

We were standing by the counter in that other store, listening to the senior partner—we will call him Jones—selling a bill of goods.

"Just listen to the old man," said the clerk. "He has been talking to that woman for ten minutes and has told her ten lies, counting those in which he has repeated himself. Let's make a calculation," he added, taking up a pad.

"Suppose that, in a logical arrangement of rewards and punishments, a man should be sunk one foot deeper in Hades for each lie he tells. The old man has been in business for forty years or over. He sells goods, on an average, five hours each day, six days in the week. That

Digitized by Google

makes, at the rate he is now going of one to each minute, three hundred per day. Here it is:

300 lies per day.
300 days per year.

90,000 per year.
40 years.

3,600,000 total, or so many feet deep.

"That puts him pretty well down," said the young man, "and unless he is taken away pretty soon, he will be too deep for consolation or relief."

These records of business morals in minor things are not, perhaps, so trivial as they seem. Every object-lesson set before a boy, assists in the making up of his character. I had not been in the store a month before I had made up my mind on two points: To be honest in all dealings; and to keep as closely to the truth as possible. That foot-per-lie problem had set me to thinking.

An incident in selling that came near turning my young hair gray, occurred in one of the first days of my apprenticeship.

We carried a fine line of furs, and a handsome muff attracted the attention of a lady upon whom I was waiting. She asked the price.

I looked at the ticket, and there it was distinctly: "O N."

As "O" meant five and "N" a cipher, I knew that the combination stood for fifty, and therefore the price of the muff was fifty cents. But I had sold cat and rabbit skins in my earlier days, and there came into my confused head the thought that furs were going rather cheap at that rate. Remembering Mr. Samson's advice, I went to Almon and asked the price. "Fifty dollars," he said promptly, and I heaved a sigh of relief at my escape. The lady did not take it at fifty dollars, but I knew in my youthful soul that she would have snapped it up at fifty cents.

One of the city's bright lawyers said a very clever thing the other day. He was seated with a group of friends and they were discussing in a desultory way the leading topics of the day. One of the parties present, Mr. ——, persisted in monopolizing more than his share of the conversation, and his views did not at all accord with those of the lawyer. As the men separated one of them said to the lawyer:

"That —— knows a great deal, doesn't he?"

"Yes," replied the lawyer. "He knows entirely too much for one man; he ought to be incorporated."—*Chicago Mail.*

A Belgian inventor has devised an immense lamp such as has probably never been seen before. It is composed of 3000 pieces, six feet high and measures 7.10 inches in diameter. It is fed with lard oil, and the consumption is said to be very small.

A $500 fire occurred in Penfield's saw factory, Bristol, Conn., some days since.

The New Savage Hammerless Repeating Rifle.

The Savage Repeating Arms Co., Utica, N. Y., have now ready for the market its New Hammerless Rifle—model of 1895. The rifles are manufactured by the Marlin Fire Arms Co., of New Haven, Conn. The rifle embodies the result of years of careful experimenting by Arthur W. Savage, a practical sportsman, who spent several years in hunting in Australia. The gun embodies the best features of several well-known systems, and combines simplicity, strength, lightness and ease of manipulation. The guns are built to use metallic ammunition loaded with smokeless powder in its full strength. The many positive advantages of smokeless powder are so obvious that it is unnecessary to urge its utility with sportsmen. A few of the more prominent points of merit are: First, the absence of smoke; second, long range and flat trajectory; third, high velocity (2000 feet per second); fourth, great penetration; fifth, non-fouling of the barrel; sixth, less recoil; and seventh, lighter weight. The point-blank range of the Savage Rifle with smokeless powder ammunition is 200 yards for accurate shooting; for practical hunting, 250 yards.

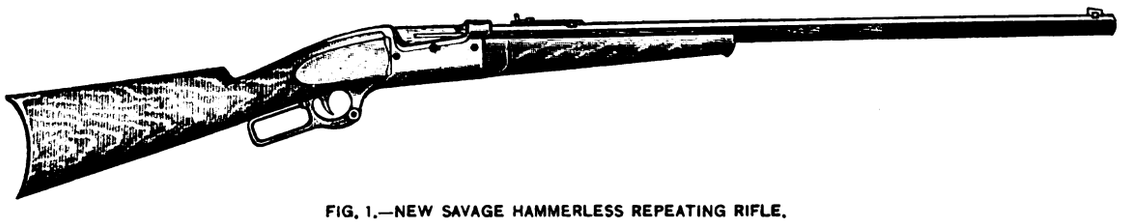

FIG. 1.—NEW SAVAGE HAMMERLESS REPEATING RIFLE.

The "stopping" power of the small metal-jacketed bullets, driven by smokeless powder, is far more deadly in effect on game than that of the larger calibre lead bullets driven by black powder. The superiority lies in the extraordinarily high velocity of the bullet, which imparts a portion of its energy to the flesh and bone, both of which become, in a sense, projectiles, producing a frightful wound, which must be seen to be understood. There is no animal, at the ordinary sporting range, that is sufficiently large to prevent the ball from passing entirely through the animal's body. Rifles of substantially the same calibre, using smokeless powder, are now being constantly used in hunting large and dangerous game in Central Africa.

The accompanying cuts show the regular Savage Sporting Rifle with the action closed; the reference letters refer to the following parts: A, represents the finger lever; B, the catch on the automatic cut-off; C, the automatic cut-off; E, the breech-bolt; F, the extractor; G, the magazine carrier; H, the projection on the receiver for connecting the finger lever; K, the sear; N, the hammer or striker; O, the main spring; P, the sear screw; R, the trigger; S, the trigger safety projection; U, the receiver breeching-up shoulder; V, the trigger and lever lock; Y, the indicator hole for showing the status of the firing mechanism. The rifles are hammerless repeaters. The magazine is arranged within the steel walls of the receiver, and is constructed to hold five cartridges, together with one cartridge in the breech opening, which makes the rifle a six-shooter. The weight, complete, is seven and one-half pounds; the length of the barrel is 26 inches; the calibre, .303; the pitch of the rifling is one turn in 10 inches. The rifle can be fired by an amateur 25 shots per minute when used as a single loader, and 40 shots per minute when used as a magazine gun. The

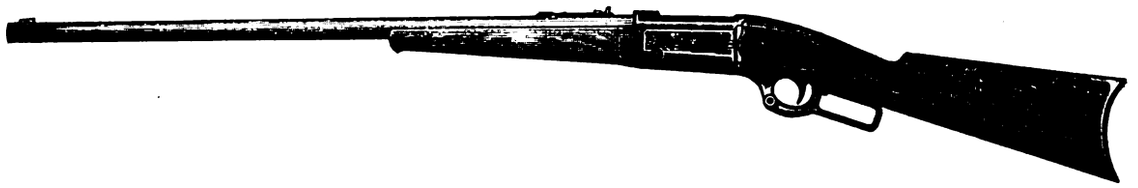

FIG. 2.—NEW SAVAGE HAMMERLESS REPEATING RIFLE.

Digitized by Google

barrel and breeching mechanism are built to resist a tensile strength of 100,000 pounds to the square inch; the barrel steel has an elastic limit of 60,000 pounds. The rifle has a multiplied extracting power on the ratio of 1 to 16—*i.e.*, a force equal to one pound in weight on the lever will exert a force equal to 16 pounds on the empty shell in the chamber. The gun is provided with an automatic indicator, consisting of numerals on the head of carrier G, exposed through a hole in the wall of the receiver, so that the sportsman can see at a glance the state of his magazine. On the top of the breech-bolt there is arranged an automatic indicator, showing, at all times, whether the firing mechanism is cocked, or in safety position. The gun is also provided with a safety device for locking the action, which can be instantaneously operated. Four different kinds of ammunition are provided for use in these rifles: first, the regular, solid head, metallic cartridge, with an extra heavy primer—the shell holding 30 grains of the "Savage" brand of smokeless powder; the metal-jacketed bullets weighing 190 grains; second, cartridges using the same shell and primer, with a metal-jacketed bullet—the jacket being placed on the rear portion only of the bullet, the front end of the bullet being soft lead forming an expanding bullet for large dangerous game; third, cartridges having the same shell, primer and bullet as first mentioned, the shells being loaded with 40 grains of black rifle powder; and fourthly, a gallery cartridge loaded with five grains of "No. 2 S" smokeless powder, with an alloy bullet weighing 100 grains. These latter cartridges are made for gallery practice and for light shooting.

The powder used in the several cartridges is compounded to give the best possible ballistic effect, and is even in pressure. The weight of the gun and the ammunition is such that the sportsman will be relieved of about one-half to one-third of the weight heretofore carried, in using black powder rifles. Some of the numerous features of novelty and advantage in this rifle are: the concentric lever, which operates the working portions of the gun and serves as a trigger guard; the cocking of the gun is accomplished after the cartridge is in the chamber and the gun breeched up, the cocking being accomplished when the gun is pulled against the shoulder of the operator; shells are ejected to the right of the operator; the withdrawal of the breech-bolt, which is moved downward at the rear end, unlocking the action and the breech-bolt is retired inside of the steel frame; the breeching-up is in the direct line of the strain, and is exceedingly strong and reliable; the magazine is circular in form, and is inside of the steel walls of the frame, each cartridge is held independently in the sprocket carrier G, the cartridge being held from end thrust by their rim, thus preventing the bullets from being jammed into the shell, which tends to produce dangerous pressure; the cartridges in the magazine can be held in reserve while the gun is used as a single loader; if the sportsman desires to lay aside his gun with the magazine charged, without a cartridge being in the chamber, he can do so by opening the action and placing his thumb of his left hand in the breech-opening, against the right face of the automatic cut-off C, and crowding the same toward the left into its recess and holding it in this position while he closes the action until the breech-bolt passes the head of the upper carriage in the magazine, when the closing of the action is completed; the gun can be instantaneously loaded and cocked by moving the lever forward and reversing the movement backward, when a cartridge will be taken from the magazine and carried into the chamber—the gun is then loaded, breached up and cocked, ready for use; it can be used as a single loader, the automatic cut-off enabling the operator to use the gun either as a single loader, or as a magazine gun, at will, without any conditions, which is accomplished by opening the action and placing a loaded cartridge—head to the rear—into the breech opening, under the catch B, which crowds the automatic cut-off C back into its recess, and at the same time carries the magazine cartridges out of reach of the breech-bolt, as the action is closed; omitting to put a loaded cartridge in the breech opening and closes the action, a cartridge is taken automatically from the magazine and carried into the chamber; the locking of the rear of the breech-bolt is accomplished by the end of the concentric lever resting on a solid shoulder in the frame, which operates as a wedge, so that the greater the recoil the greater the force which holds the breech-bolt against the breeching-up shoulder; the gun can be uncocked by moving the lever backward while the trigger is held back by the finger; the action is locked by the movement of a positive bolt, which can be instantaneously operated; the magazine is charged by opening the action, then placing the cartridge—heads to the rear—in the breech opening and crowding the cartridge, with the thumb or forefinger downward, and carrying the same rearward until the rim of the cartridge engages under the catch B on the automatic cut-off C—repeating these operations until the magazine is fully charged; metal fillers, containing six cartridges, may be used, and the gun charged in one operation. The balance of the gun always remains the same when drawing on the magazine.

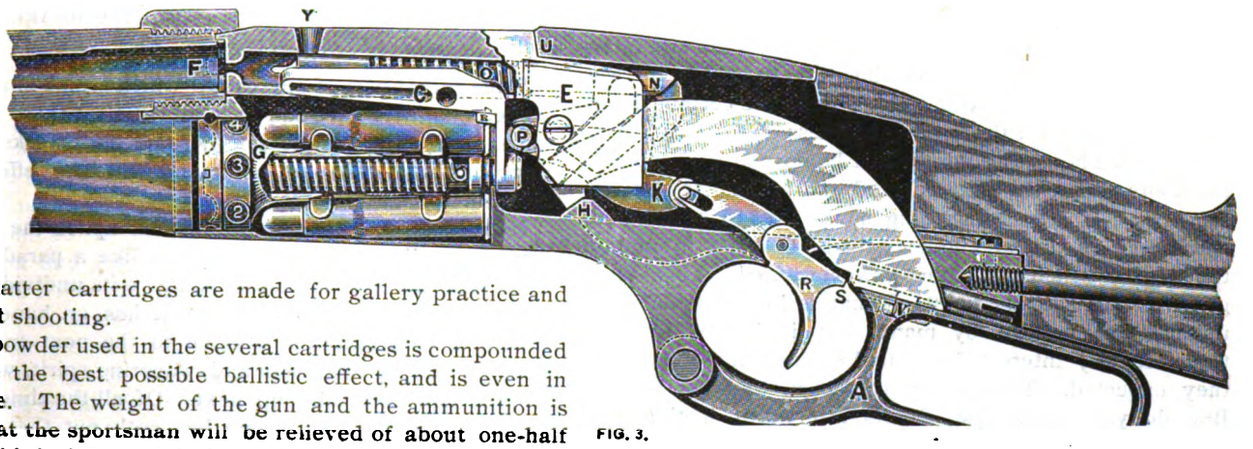

FIG. 3.

The company will furnish, on request, catalogue giving detailed description and operation of the gun.

An ingenious French photographer has recently discovered a method whereby photographs can be taken under water. His apparatus consists of a barrel filled with oxygen, surmounted with a glass bell which contains an alcohol lamp. By means of a mechanical contrivance, powdered magnesium is thrown on the flame of the lamp, which flares whenever a view is taken. Some wonderful pictures of the bed of the Mediterranean have been procured by these means.

THE HARDWARE CLERK'S CORNER.

DOES THE SUCCESS OF ANY HOUSE DEPEND UPON ITS CLERKS?

EDITOR HARDWARE: The question itself is not generally looked into by clerks themselves as deeply as it should be. For, by second thought, it might reveal to them something of a very valuable nature and lead them to take a more active part.

It appears to be a rule among a good many clerks—so much for so much. Just think a moment. What do we profit by the experience; what is its worth to me if not recognized by my employer; what value are we to those who appreciate real worth and reward accordingly? The combination is an individual one to be solved; the results act collectively. When a young man starts out to begin life he is put at the foot of the ladder. It may be office boy or otherwise, according to the nature of the business. If he is careful and has an ambition to secure a better position he will see to it that his humble part will be mastered to the satisfaction of himself and employer. There are questions of this sort arising sometimes which seem to check the progress of the ambitious boy. What would you do if you were asked to do something other than that you expected to do; or suppose I did something for someone which I thought was right and got hauled over the coals? There are many other questions which might appear simple and foolish, but play an important part in a boy's life and interfere with his performance of the duty to which he was called. There is one thing sure; there are certain things to do to prepare for the coming business of the day. If in a mercantile house the doors must be opened on time and the floors swept, the offices dusted and books placed ready for work. If a manufacturing house fires to be kindled, machinery oiled and engineer ready to start in motion the engine which gives the power wanted. This, then, gives us the starting point of what is looked upon as an unimportant feature by many, but if looked into by those directly interested will find it more important than they expected. To sum up this part, then, is to say: Boy do your work first, favors afterwards if time and place permit.

This can be applied to every position, and where sustained will be found to be extra strongholds for the structure.

Now the next step is to learn the business of the house with which the boy is connected. Having been found faithful and competent in little matters advance is made into the shipping department. There an acquaintance is made with the methods of packing and shipping and the different kinds of goods. Possibly you receive goods. This gives the boy an insight as to where they came from, and many other minor points of information too numerous to mention, but which help to make important moves to success.

This mastered, another advance is made to the goods themselves. Now it may be it is only to help put the goods in proper shape, so that they can be handled with care and despatch by those whose duty it is to use the goods for their various requirements. A chance is here given to become directly acquainted with the goods, their position, their composition, their uses and many other points of interest which arise as the occasion permits.

Then again another step is made, and right here a very important item should not be overlooked. The employer should see that the advancing clerk is made thoroughly acquainted with the goods as regards the different qualities if there be such, or whys and wherefors concerning certain articles, so that as an order clerk selections can be made with intelligence. Having been proved proficient another advance is made, and he is placed at the head of the department. The thorough experience gained places the clerk in a position where at any time he can instruct, advise and in fact know just where to place, and how, the business which comes before him.

The next step is to embark into actual commercial life, and this step is often looked into by the heads of the concern with very grave importance, and it is often decided to keep him at home, unless a supply is at hand to fill. And should it be he is sent out to represent the house, and he is fully prepared.

Now in a rough way an idea has been attempted to show that a house with a set of clerks, from top to bottom all fully equipped with the knowledge the various positions require, can be nothing less than a success, for they are ready to ward off anything that may strike to its detriment and replace it with that which is of interest to them and the house.

Then this finely constructed piece of machinery must be taken care of, for it needs a good, conscientious engineer to keep in touch with the different parts, for like everything else something is likely to get out of order and must be attended to.

Motto: A house divided against itself must fall.

New York, July 5, 1895. HARDWARE CLERK.

THE USES OF TIME.

Time is that part of our estate which seems of all others a fixed quantity. We can have all the time there is, but no more. But the example set by some hard workers seems to prove that nothing we command can be in effect so increased.

It is an axiom that the more we accomplish the more we can accomplish, though it appears like a paradox. The mind that has been so trained can give its undivided power for the time being to whatever it has on hand, can do thorough work and then pass on to the next subject. It loses no time by indecision and wavering spirit, wondering what it had best take up next. Of all the time-wasters, this is one of the worst. One has aptly put that "a busy man's recreation is more productive than an idle man's work." An ever ready mind will acquire more knowledge by half an hour's reading in a library on just the subjects upon which he wishes information, than an idler will in a day's research. An industrious man seems to strike knowledge on the jump, and he can fill his time so full of useful doings that it resembles an assortment of cutlery from an expert packer. There is no haphazard work in the days of such toilers. There is a steadiness of purpose, of mind, and of hand, that can take up new or unexpected tasks without losing time in fussing and fuming, and then carry them through to success. Such workers are generally very quiet about it. You hear less of their doings from themselves than from anyone else. Their work speaks with a more subtle tongue. They do not find fault with or quarrel with their tools and always "rejoice in their labors." Happy workers are by long odds the most successful ones.

It is good to learn in youth the art of making the most of time, for 'tis truly said that "Time is money."

ADVICE TO CLERKS.

Don't remain a clerk longer than you are compelled to. Become a proprietor.

Give a pretty young girl who comes after a sad iron, the same attention you would a laborer who comes after a shovel—but no more.

Many men fail through a lack of self-reliance. In some cases it is so lacking that they have not sufficient courage

Digitized by Google

even to try to accomplish what they believe will result in success.

It is just as easy, nay, easier, to act rightly than otherwise, and once you endeavor to guide your conduct by such methods, be sure that it will be the starting point to ultimate success.

There is nothing like full doses of hard work to keep both mind and body thoroughly healthy, and to fully enjoy the sweets of life.

"Hop's" Corner.

It is a growing subject of complaint among the retail dealers in Hardware that the manufacturers, in their desire and anxiety to make remunerative sales, are constantly crossing the boundary lines which separate the jobber from the retailer and seem to be endeavoring by all possible means to sell the consumer direct.

This same objection in a similar degree was urged over thirty-five years ago in the interest of the jobber as against the retail dealer, it being logically argued that as the distribution of a manufacturer's product by a jobber was in larger proportion than was possible through dealings with retailers, they were entitled to a large share of protection in the way of competition with the manufacturers direct. Meetings were held and jobbers' associations were formed for the purpose of resolving to purchase no goods from any maker who directly solicited the trade of the retail houses; and they even went so far as to dictate the form of labels which should be used by the offending manufacturers, who in the future must omit all reference to the post-office address of the town where the mills were situated, so the information-seeking retailer could not enter into correspondence with the producer direct.

A great many makers of American Hardware were compelled to bite the rod, and endeavor to placate the powerful band of jobbing houses, over a hundred of which could be counted in the three principal centres of New York, Boston and Philadelphia. These Eastern manufacturers had, in a struggling sort of way, been doing their level best to introduce their home-made products in competition with the vast amount of foreign goods annually marketed in our country, but it was an up-hill job! The jobbers didn't believe in the dissemination of too much intelligence as to any obtainable scale of prices and discounts. They had been educated in a school of conservatism which, by purchasing goods abroad, was enabled to cover up the bottom costs from even the best salesman in the house, by keeping them in a foreign bill-book locked up in the safe. He was supposed to accept the market cost as the basis of any sales he saw fit to make.

There were some manufacturers who at a later date could read between the lines and readily see that if the reputable retailers once handled lines of goods in which merit was the corner-stone of their popularity, the jobbers could be forced to recognize their growing demands and be compelled to supply what was needed. So they sold the retailers direct; distributed their circulars and catalogues largely. The catalogues were not very pretentious affairs in those days, being only of a few pages, but they enabled them to make known the good quality of their wares, and proved that they were wise in their day and generation; for without being compelled to follow every trifling variation in prices which in inferior goods is constantly noticeable, these same concerns and their successors have held the confidence of the retailers and consumers even to the present day.

But the question naturally arises: Can the jobber to-day command and dictate on what terms he will handle any line of goods? Some lines have grown so large and broadened so immensely in the last ten years, as to be entirely beyond the distributing machinery of the jobbing trade, or with even that of the retailer combined.

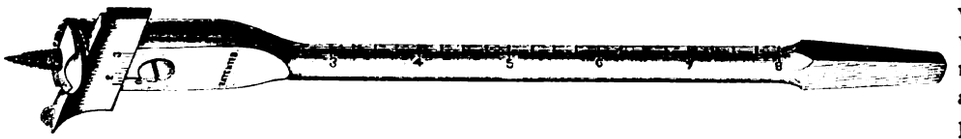
Take the now extensive line of builders' Hardware and notice on what artistic and æsthetic lines of excellence consist its present product from any leading factory; and it will be too plainly evident that only through the medium of the architect and builder direct, can any influence be brought to bear to stimulate their "up-to-date" requirements when the goods made are backed by the modern schools of mechanical art in construction and technical skill, and which show an attention to detail and harmony of design in which the dealer simply as a handler of merchantable Hardware, has little or no sympathy, as he is more apt to "damn with faint praise" any such advancement in the school of progress, on account of the endless and various amount of knowledge and labor rendered necessary in its intelligent distribution.

"Hop."

American Firearms in Germany.

American firearms manufacturers who have been seeking to introduce their wares into Germany are often embarrassed by governmental restrictions imposed there, which shut arms of our make out of competition with those made in some European countries. W. H. Robertson, our consul at Hamburg, has taken pains to learn just what the trouble is, and sets forth his findings in a report to the Department of State. It appears that all small firearms arriving in Germany from the United States are required by law, under heavy penalties, to be taken to a German official proving establishment, and there proved before being put upon the market. The expense of this preliminary often eats up so much of the profits as to make further commerce impracticable. The German law, however, recognizes tests made, under certain prescribed conditions, in proof-houses in foreign countries. The Belgians and English have established such proof-houses, and their goods, therefore, come into Germany on an equal footing with home products, crowding out American arms almost entirely in the case of the more expensive qualities, and wholly in the case of cheap articles. The Belgian proof-house is at Liege, and in England there is one at Birmingham; the proof-marks of the Gunmakers' Co., a London guild, are considered valid also. It is the council of the German Confederacy which determines what foreign proof-marks will be accepted as equivalent to the domestic.

As the government of the United States would not be likely to set up an establishment for the purpose of inspecting and stamping firearms of private manufacture, the American gunmakers would probably be obliged to combine and set up something of the sort under their own auspices if they considered the German trade worth keeping. But there would be nothing to prevent their getting the prestige which would come from having proof-tests conducted at a government armory, they guaranteeing the government against any expense thus incurred for their private profit.



Pocketknite blades are very unevenly tempered. Even in so-called standard cutlery some blades are hard and some are soft. For the latter there is no remedy, but the temper of hard blades can easily be drawn slightly. Take a kitchen poker and heat it red hot, have the blade that is to be drawn, bright, and hold it on the poker for a moment. When the color runs down to violet blue stick the blade into a piece of tallow or beef suet until cold.

The Cumberland Nail & Iron Co., Bridgeton, N. J., have resumed operations, after an idleness of over a year.

A Record Breaker.

Clark's Improved Pattern Expansive Bit is a comparatively new tool, having been on the market but a year, but it has had such unprecedented sales and has proved so uniformly reliable, that we deem it worthy of special mention. This tool is marketed by Tower & Lyon, No. 95 Chambers Street, New York. The accompanying illustration gives some idea of its good points. It is made of cast steel, in three pieces; the stock or shank, the cutter, and the screw. The manufacturers state that one of the features of this tool is the spring cap, formed by a cut, separating but not detaching the face of the stock. Another point in its favor is that the shank is graduated for depth, an advantage that will appeal to any mechanic; there is no loose clamp plate to lose. The makers inform us that thousands of dozens of these tools have been marketed and not a single one has been returned as defective.

Making of Isinglass.

We venture the statement that there is not a more interesting manufactory in the State than the Isinglass Works connected with the Boston Flint Paper Co., occupying the plant of the Wire Works, recently fitted up with suitable machinery. The work is the converting fish sounds, which come to the factory in bulk, into rolls of fine ribbon-like gelatine, or isinglass. Two heavy grinders macerate the sounds into sheets of a half inch thickness. These are passed through successive rollers until a fine ribbon-like substance is given. This is dried, and later on wound into coils of a few pounds each, and packed into cases containing 115 to 120 pounds. The material used is largely hake sounds, which come from along the coast. Superintendent Grimes called our attention to the stock recently imported from Bombay, India, boxes of Bombay crabs, which make very clear isinglass. The sounds which come from the Maracaibo Pike make a handsome article.

The isinglass with which many are familiar is in reality a food product. Its chief use is in clarifying beer, and in chemical work; it also enters into gelatine and glue compounds. That there is a wide demand for the article was shown to us by the consignment of ten half cases shipped Saturday to California parties. The isinglass cannot be made in warm weather; the rolls through which the sounds are drawn would refuse to work. So the months of December and January are utilized. The day we looked in there were forty men busy, and the machinery was all working smoothly. But the product is of so fishy a nature, we imagine there are times when the work is like handling a boat load of eels.—*Hallowell (Me.) Register.*

The Making of Shot.

The shot-making trade has a legend which recites that back in the days when guns were shot off by lighted matches and were swiveled to supports because they were too big and clumsy to be lifted to the shoulder, and when all shot was molded as bullets are to-day, some workmen were fastening an iron grating to the wall of a castle. They had cut out the hole in the stone, and after placing the iron in the hole, poured some lead in to hold the iron in place, just as they do to-day. Some of the lead escaped and ran over the edge of the wall into the moat below. Soon afterward the attention of the soldiers was attracted to the lead in the clear water, and dipping it out they found that the metal in falling from the height had become globules. After that those soldiers made their bullets by sprinkling melted lead over the castle wall into the waters of the moat.

But pure lead will not always assume the globular form when melted and thrown from a height into water, so shot-makers mix with it metallic arsenic, which not only makes the lead form into spherical pellets, but adds hardness to it.

The melting is done in the top of the tower, where a large melting kettle stands over the coal fire. In the centre of the floor is fixed a colander, with holes varying from 1-50th to 1-360th of an inch. Directly under the colander, 200 feet below, is a well of water, and all day long a shower of molten lead is falling into the water from the colander. The lead ingots are taken to the top of the tower in elevators, and the arsenic is mixed with it in the melting kettle. One man attends to the kettle and another keeps the colander supplied with the molten metal. A pipe leads from the kettle to the colander and the supply is regulated by a valve. The man at the colander continually skims the "cream" or scum of oxide from the top of the lead and sees that the lead passes through the holes freely. Near at hand is the "telltale" which shows him how the shot is running. It is a cup fixed to an endless wire which leads into the water. He sends the cup down by turning a handle and it dips into the shot lying in the water and brings up a sample of the run. The shot is always larger than the holes in the colander, for it swells while become globular in passing through the air. The shot is formed in its downward flight, and the water serves not only to cool it quickly but acts as a soft cushion so that the shot is not flattened when it strikes the bottom. The shower of shot patter into the water, churning it to foam, and the small pellets resemble a small section of a heavy downpour of rain.

A Great Fly-Wheel.

Among the most recent and novel applications of wire, perhaps none has greater interest to the mechanical world than that presented by the new wire fly-wheel lately erected at the Mannesmann Tube Co.'s Works, Germany. Heavy fly-wheels, driven at high velocities, obviously present dangers of breaking asunder from the great centrifugal force developed. The wheel at the factory mentioned consists of a cast iron hub or boss, to which two steel-plate disks or checks, about twenty feet in diameter, are bolted. The peripheral space between the disks is filled in with some seventy tons of No. 5 steel wire, completely wound round the hub, and the tensile resistance thus obtained is far superior to any casting. This huge fly-wheel is driven at a speed of 240 revolutions per minute or a peripheral velocity of about 2 8 miles per minute (250 feet per second, approximately), which is nearly three times the average speed of any express train in the world. The length of wire upon such a constructed fly-wheel would be about 250 miles. The use of paper is also regarded with favor as a face for large fly-wheels, the tensile strength of paper being enormous, and it is quite possible that some of the new big fly-wheels will be built up with a paper rim.

Stockholders of the Girard (Ohio) Stove & Foundry Co. have elected the following directors: Thomas Parrock, H. B. Shields, F. A. Williams, W. J. Wallis, L. S. Crum, A. Obendorfer, Fred Andres and William Farr. The directors elected these officers: President Thomas Parrock, vice-president and general manager W. J. Wallis, secretary F. A. Williams, treasurer L. S. Crum.

A man went into a Portland (Me.) Hardware store and asked for a second-hand coffin. He said he kept a country store and thought he would keep second-hand coffins for sale. He thought the Portland stores kept everything from hornet's nests to second-hand coffins, and was grievously disappointed to find they didn't.

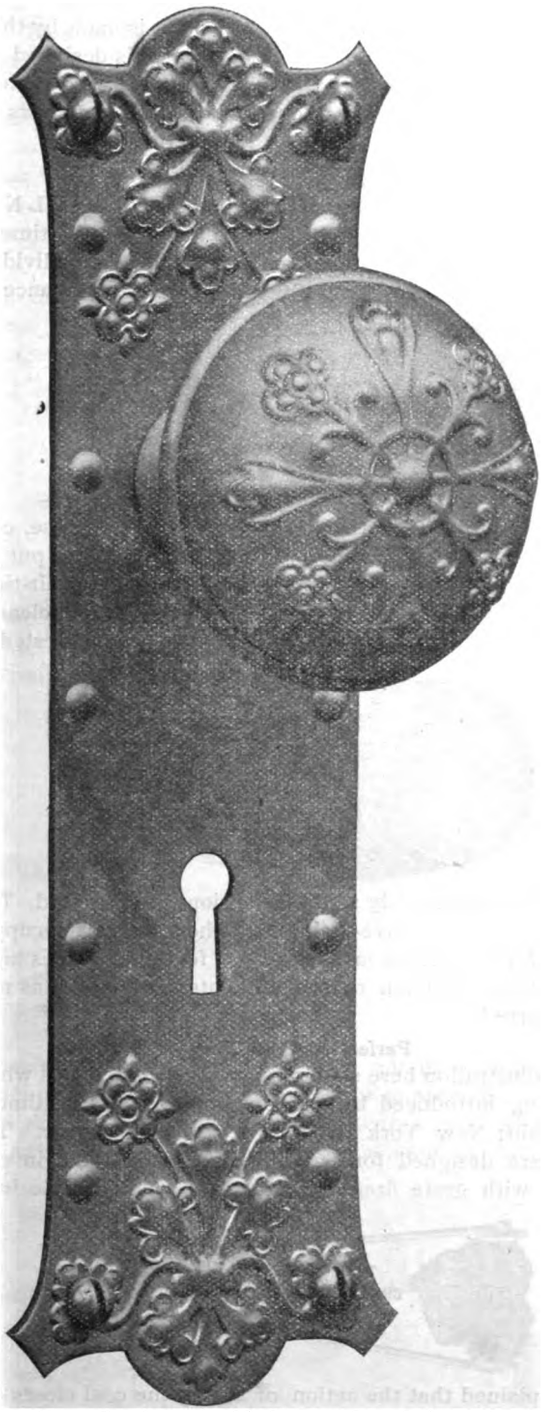
NEW GOODS IN THE MARKET.

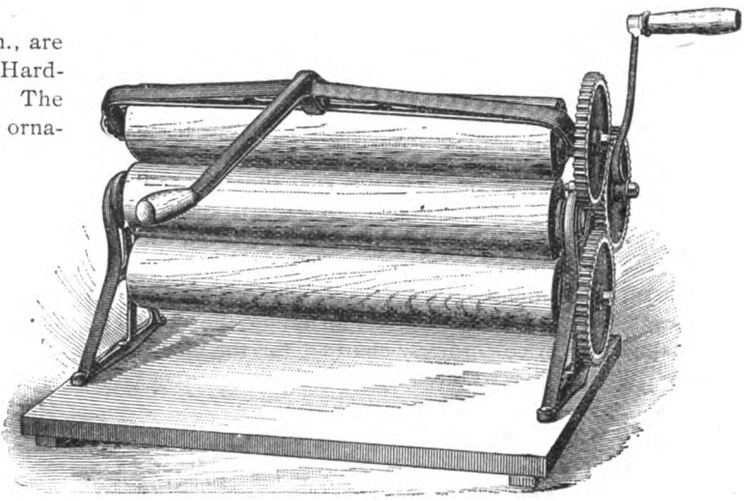
If you have anything NEW, let the world know it by illustrating it in these columns.



NO CHARGE WHATEVER is made, direct or indirect, as our interest lies in showing the readers of "HARDWARE" where the LIVE manufacturers and wholesalers are, and what they are doing.

When your NOVELTY or SPECIALTY is ready, send us an Electrotype and descriptive matter, which will appear immediately.

The Hardwaremen everywhere read this department; it is to your interest to make prompt use of it.



Trilby Hardware.

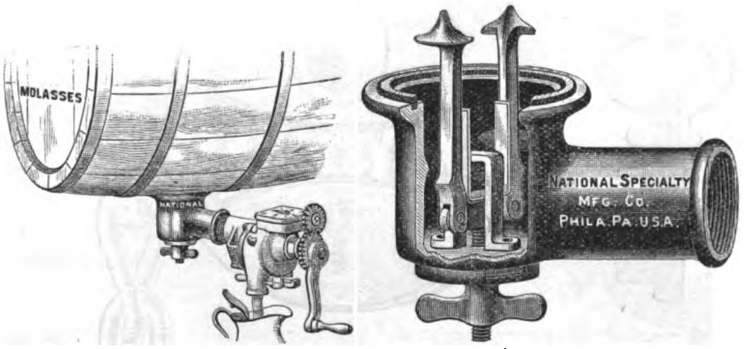
The Norwalk Lock Co., of South Norwalk, Conn., are placing on the market an artistic line of sheet metal Hardware which is finding a ready sale among the trade. The company, feeling the demand for a cheaper line of ornamental goods than could be produced in cut metal and which would have the appearance and wearing qualities of the cast goods, have brought out this popular line of "Trilby" Hardware, upon which they would be pleased to quote prices upon application.

The Petersen Mangle.

Petersen & Fischer, No. 166 Pierrepont Street, Brooklyn, N. Y., are offering the trade the Mangle here shown. It consists of three rollers, the top and bottom ones being revolved by the use of a crank and gearing, while the middle roller is revolved by contact with the upper and lower ones. The pressure is regulated by a hand lever. All parts are interchangeable, and extra rollers can be obtained. It produces a gloss equal to that obtained by an iron. The adjustment of the rollers is perfectly automatic. This machine is described as cheap, durable, and useful, and is said to save time, labor and coal, and preserve the fabric of the clothes. It retails for $5 and the wholesale price is $3.20.

National Barrel Drainer.

The National Specialty Mfg. Co., Philadelphia, Pa., have recently put on the market a new Barrel Drainer, illustrations of which appear here. Fig. 1 of the accompanying illustrations show the Faucet and Drainer in practical use; Fig. 2 shows the Drainer in sections. It is designed for use in connection with their National Measuring Faucet, and will drain a barrel of molasses to the last drop. The Drainer is threaded in the outlet to receive the Faucet. Two grapples are worked automatically by a thumb-nut, which is turned back until the grapples come together. The grapples are then inserted in the bung hole of the barrel and the thumb-nut tightened, when it will be found that the Drainer has become affixed to the barrel, the joint being conformed to the shape of the barrel and made perfectly tight by a rubber packing. A reversal of the operation instantly removes the Drainer. When once attached to each other, the Faucet and Drainer may be used repeatedly without being taken apart. The Drainer fits ove any size bung-hole and dispenses entirely with bung augers.



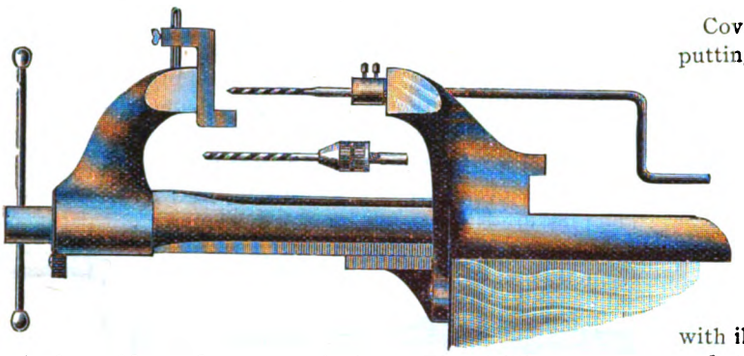


FIG. 1. FIG 2.

Digitized by Google

Pratt's Vise and Drill No. 2.

The Millers Falls Co., No. 93 Reade Street, New York, are putting on the market the Vise and Drill shown in the accompanying illustration. The jaws of the vise are of steel,

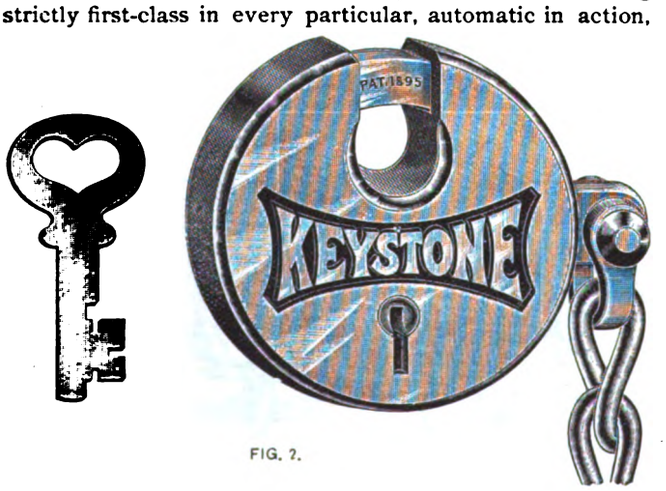
4 inches wide, and open 11 inches. The drilling attachment, including the chuck, are sold with the vise. The drill socket fits a ½-inch drill shank also the shank of the drill chuck, so that holes may be drilled from 1-32 to 1 inch in diameter. The drilling attachment, it is explained, may be removed by loosening one set screw. The makers state that the drill is adapted to nearly all kinds of work, that they are selling the tool complete, including the chuck, at about the same price formerly charged for the vise alone, and that the tool is warranted by them to give perfect satisfaction.

New Shackleless Automatic Padlock.

The Keystone Lock Works, E. T. Fraim, proprietor, Lancaster, Pa., for whom J. C. McCarty & Co., No. 97 Chambers Street, New York, are agents, are introducing the

FIG. 1.

shackleless automatic padlock shown in the accompanying illustrations. The lock is two inches in size, made of high bronze metal, and is referred to by the makers as being strictly first-class in every particular, automatic in action,



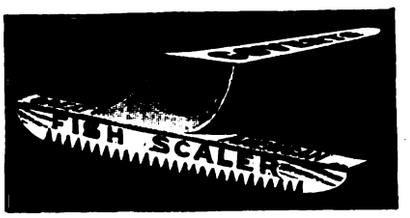


FIG. 2.

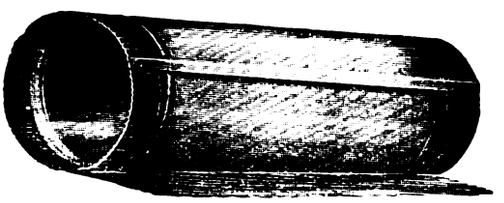
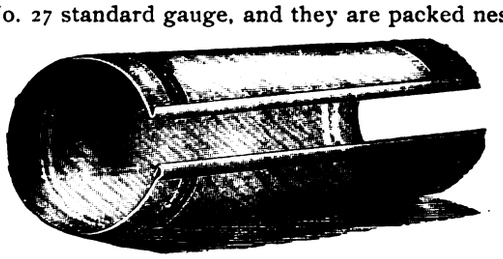
practically unpickable, and as without weak points. In operation the staple is inserted in the recess of the case, and when the staple strikes the projection marked A in Fig. 1 it releases the locking bolt, which automatically springs in position and securely locks. The locks are finished in good style with letters in black enamel relief, are provided with two nickel-plated flat steel-keys, and are packed in half dozen boxes, the changes all different.

Covert's Improved Fish Scaler.



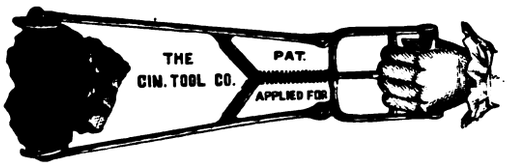
Covert's Saddlery Works, of Farmer, N. Y., U.S.A., are putting on the market their Improved Fish Scaler, as here-



with illustrated. The Scaler is now made entirely of iron and steel, plated with a non-corrosive metal. The rapidity and ease with which a fish can be cleaned with the Scaler, is referred to by the makers, and the point is made by them that it does not tear the fish. The Scaler is designed for use in fish markets and in families; also by fish peddlers. A sample Scaler can be obtained of the manufacturers by mail, for ten cents.

The "X L N T" Stove Pipe.

The accompanying illustrations represent the "X L N T" stove pipe as made by the B. C. Bibb Stove Co., Baltimore, Md., and claimed by them to possess several individual points of merit. Among these points are an avoidance of

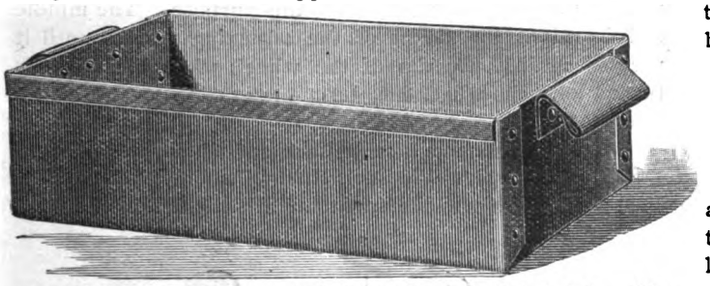


dirt and smut, so that they are perfectly clean in use, convenience of handling, ease with which they are put together, and the fact that they make a strong, air-tight joint. Every joint is made of Harvey's patent cleaned iron, No. 27 standard gauge, and they are packed nested so

that but comparatively small dimensions are required. Two hundred joints of five-inch pipe, when nested, occupy a space of two feet square and two feet five inches high. They are packed ten or twelve joints in a bundle, as may be preferred.

Perfection Coal Tongs.

The illustration here shown represents Coal Tongs which are being introduced by the Cincinnati Tool Co., Cincinnati, Ohio; New York office, No. 67 Reade Street. The Tongs are designed for handling bituminous coal in connection with grate fires and are made of malleable iron.



It is explained that the action of lifting the coal closes the jaws, the weight coming upon the T-shaped slide; that the heavier the lump the easier it is handled, and that a child can use the Tongs with ease. The total length of the Tongs is sixteen inches, and they are furnished in japan or nickel.

The J Steel Tote Box.

The accompanying illustration represents a sheet steel Tote Box put upon the market by the Kilbourne & Jacobs Mfg. Co., Columbus, Ohio. This box is made of a single sheet of pressed steel of any desired gauge. The upper edges of the sides are lapped one-half inch, stiffening and

strengthening the box, and giving it a smooth finish. The handle is riveted on each end and is of same gauge steel as box. This box being flat on bottom, and corners stiffened by laps, as seen in illustration, can be piled one upon another, ten or twelve deep, without danger of "buckling" or crushing under the strain. The weight of the box complete, only eight pounds. The manufacturers state that the box is suitable for handling bolts, rivets, screws, nails, nuts, washers, small castings, ore, quartz, and other rough or heavy substances used around machine shops.

The New Idea Nail Set.

The Storm Mfg. Co., Newark, N. J., for whom John H. Graham & Co., No. 113 Chambers Street, New York, are sales agents, are just placing on the market the New Idea

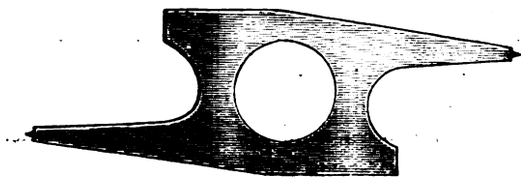

FIG. 1.

Nail Set, which is fully described and illustrated here. Fig. 1 shows the Set; Fig. 2 shows the way it should be held by mechanics when in use; Fig. 3 shows the way it is carried when nailing up work. The manufacturers state "that the

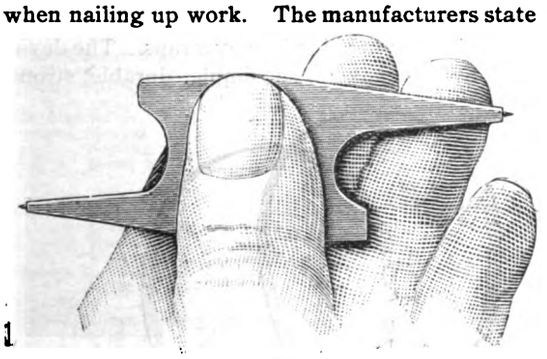

FIG. 2.

Sets are carefully made from the best quality of tool steel. The points are turned and thoroughly tempered, and will not break off." They also state that "one trial will convince anyone that it is a great improvement over the old

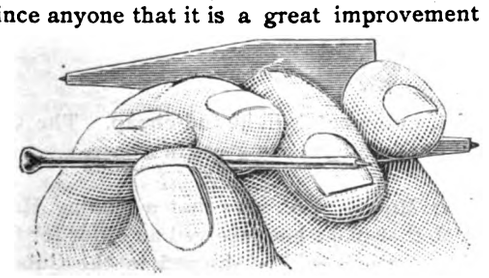

FIG. 3.

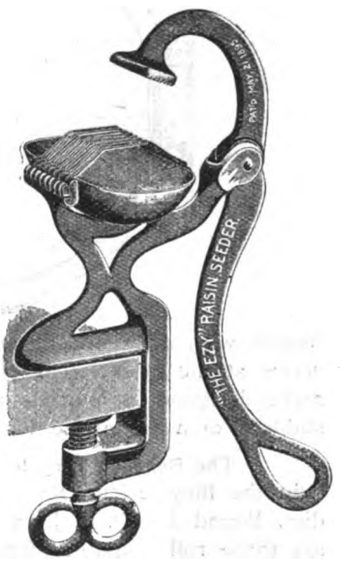
style. It is handy to carry, and not easily lost. It has the celebrated diamond point, which prevents its slipping; is double-headed, and really two sets in one." Put up in one-fourth and one gross boxes.

New 25-36 Marlin Cartridge.



The Marlin Fire Arms Co., New Haven, Conn., are offering sportsmen a new 25-36 Cartridge, illustration of which is here given. The Cartridge is loaded with thirty-six grains of powder, and has a 106-grain bullet with metal patched sides and soft lead point. The company states that owing to the mechanism of our action, cartridges can be used varying in weight and length, from the empty shell

as a minimum up to the full-sized cartridge as a maximum, thus allowing the use of varying proportions of powder and lead.

The "Ezy" Raisin Seeder.

The American Specialty Co., Hartford, Conn., and No. 132 Lake Street, Chicago, are placing on the market the "Ezy" Raisin Seeder, patented May 21, 1895. They claim it to be not only "the most practicable, but at its low retail price, twenty-five cents, a sure trade winner. In operation, the meat of the raisin is crowded up into the grooved presser-head, and the seeds, unbroken, forced through the wire bed into the removable tin cup. The form of wire bed gives increased strength, and wires being spring tempered, do not become broken or bent. With work in sight, a child can seed a pound of raisins in five minutes."

New Iron Bench Level.

C. E. Jennings & Co., No. 79 Reade Street, New York, are putting on the market two new Iron Bench Levels, illustrations of which appear here. Fig. 1 represents the ordinary Level; Fig. 2 shows a Level that can be fastened to a square or straight edge, thus obtaining a Level for greater surfaces. The makers state that the Levels are made from solid castings and built on heavy stands, which prevents them from breaking, if dropped. It is further stated that

FIG. 1.

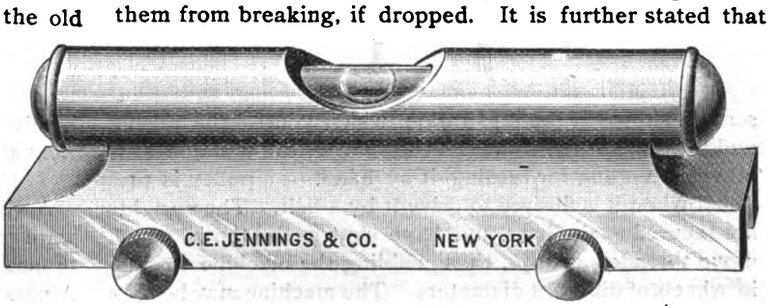


FIG. 2.

the Levels are inspected and warranted positively accurate. The Levels are four inches long and come japanned or nickeled.

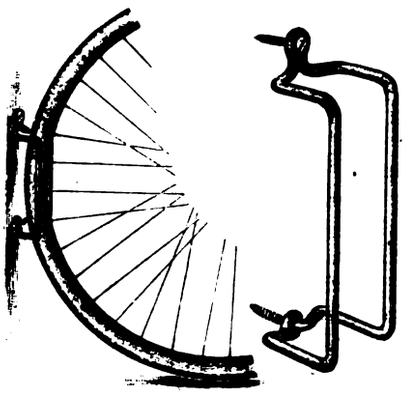
ILLUSTRATED BICYCLE NOVELTIES.

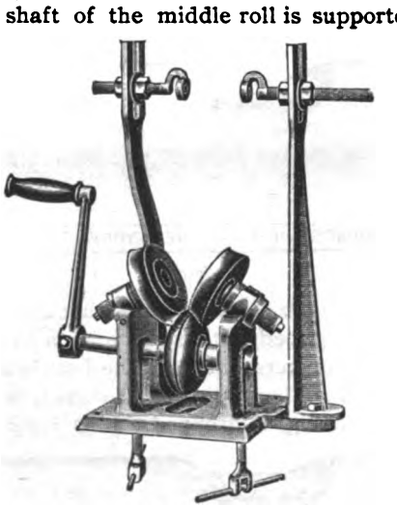


MANUFACTURERS and DEALERS are invited to make FREQUENT USE of these columns.

Anything NEW in BICYCLES or BICYCLE NOVELTIES should be sent us immediately. NO CHARGE, direct or indirect, is made, as our interest lies in SHOWING THE HARDWAREMAN what is going on in THE BICYCLING WORLD.

When your NOVELTY is ready, send us an Electrotype and descriptive matter, which will appear immediately.

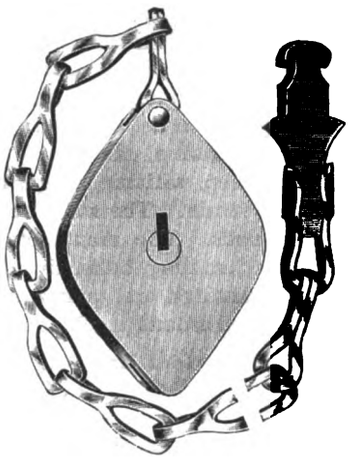
Standard Bicycle Holder.



The illustrations here shown relate to a Bicycle Holder offered by the Hamblin & Russell Mfg. Co., Worcester, Mass. The Holder is made of wire about 6 inches in

length, with a thread cut on one end and a loop for a screw at the other. The Holder is here shown in use, and is designed for putting up in the house, shop, shed, stable or on a post at the door.

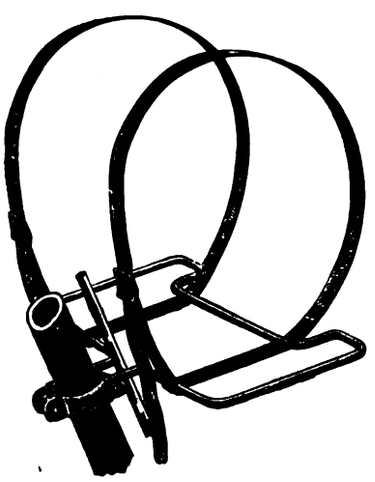
The Benedict Bicycle Rim Rolling Machine.



In the Bicycle Rim Rolling Machine made by B. Benedict, Bound Brook, N. J., and herewith illustrated, there are three rolls capable of revolving on their axis. The shafts of the two outside rolls are threaded and are held in position by two nuts which clamp against the open slotted jaws in which these shafts rest. The distance between the rolls is adjusted by these nuts, thus enabling the machine to take in any wheel, no matter how far the spokes are apart. The shaft of the middle roll is supported on two

screws, shown in the illustration, which control the raising and lowering of the roll. To the shaft of the middle roll is attached a crank for turning it by hand, or a pulley is provided when it is desired to drive it by a belt. The uprights are secured to the base and have slots at the top in which move threaded clamps, thus enabling the machine to take in wheels of different diameters. The machine may be used for truing up a bent rim or for spreading a metal rim to increase its diameter. To true a wheel one of the outside rolls is removed by loosening the nut. The wheel is then placed in position and the roll put back. The shaft of the wheel is secured to the clamps on the uprights, the two nuts of the wheel being used for this purpose. The middle roll is raised by means of the adjusting screws until it presses against the rim of the wheel, when the crank is turned until the wheel has been brought to a true condition.

Diamond Bicycle Lock and Chain.



Robert H. Ingersoll & Bro., No. 65 Cortlandt Street, New York, are offering to the trade the Diamond Bicycle Lock

and Chain, illustration of which is herewith shown. The chain is of brass strongly made as is the lock. It has a revolving key hole, and in unlocking, the clasp must be withdrawn or it will remain locked. These locks and chains are finished in either brass or nickel and sell for 25 cents.

Bay State Adjustable Bundle and Luggage Carrier.

The accompanying illustration represents an Adjustable Bundle and Luggage Carrier for bicycle use offered by Hamblin & Russell Mfg. Co., Worcester, Mass. The Carrier is made of steel wire, handsomely nickel-plated, fastening to the steering head of any style of safety machine. The articles carried are held in place by straps. The device is referred to by the makers as simple, durable, strong,

handsome, useful, ornamental, light and cheap. The Carriers are packed one in a box, one gross in a case.

A dispatch from Mobile, Ala., says that a leading Hardware merchant of that place has received an order for fifty thousand cartridges, which will be shipped to the Cubans. A passenger from Tampa reports that arms and ammunition are brought into Port Tampa daily from New Orleans and elsewhere and shipped in barges and schooners across to Cuba. The people of Tampa, he said, are in sympathy with the insurgents and assisting them in every possible way.

Joseph Bardsley's New List.

Joseph Bardsley, Nos. 147 to 151 Baxter Street, New York, announces that as a result of increased sales and improved methods of manufacture, he has been enabled to make a material reduction in the prices of Checking Spring Hinges. The new list goes in force August 1st, and is given here:

No.	For Outside Doors.	Or Inside Doors.	Per Door, Complete.
1		2 feet 9 inches wide.	$8.00
1½	2 feet 6 inches wide.	2 feet 9 inches wide.	9.00
2	2 feet 9 inches wide.	3 feet wide.	10.00
3	3 feet wide.	3 feet 6 inches wide.	12.00
4	3 feet 6 inches wide.	4 feet wide.	14.00
5	4 feet wide.	4 feet 6 inches wide.	16.00

Bicycle Shows for '96.

While the L. A. W. was holding its big meet at Asbury Park the executive committee of the Board of Trade held a session. President A. G. Spalding, Walter Burnham, Secretaries A. Kennedy-Child and E. R. Franks and Messrs. R. L. Coleman, Walter Measure and Joseph McKee were present. It was decided that the Chicago show should open on January 7, 1896, and the New York show at Madison Square a week later. The allotment of space for the Chicago show will be made on October 2d and for the New York show on October 9th.

The Grand Crossing Tack Co., Grand Crossing, Chicago, Ill., have just completed their large wire nail mill, and are now moving into it the wire nail machines which they have heretofore operated in their tack factory, and they are also putting into position in this mill the wire nail machinery which they purchased last spring from the receivers of the McCash plant at Burlington, Iowa. The mill as soon as in complete operation, will have a capacity of 1200 kegs wire nails per day.

The Jos. Dixon Crucible Co.'s calendar card for July, shows an average New Jersey girl engaged in shooting fireworks composed of American Graphite Pencils.

RECENT TRADE PUBLICATIONS.

No single treatise or other work hitherto published on the India Rubber industry, gives an insight into such a variety of uses of this important material as does the new "Descriptive Catalogue and Price List" of the New York Belting & Packing Co., Ltd., a bound volume of one hundred pages. We have often noted the growing value of the trade catalogues of manufacturers as a part of the industrial and scientific literature of the day, and it seems that these are to take the place largely of regulation books such as issue through the publishing houses in relation to many branches of industry. This style of catalogue is a distinct departure from others, in that it combines the artistic with the practical. The commonplace and somewhat monotonous trade catalogue is enlivened by sketches and descriptions that, in a pleasing way, convey an idea of the various uses of rubber, besides containing much information on the methods of manufacture, in which respect it marks a wide difference from the former policy of manufacturers, of keeping secret all facts of this kind. This catalogue is introduced with some notes on the history of the New York Belting & Packing Co., Ltd., with illustrations and descriptions of their three factories. Some account of their trade marks follows, after which comes the department of rubber belting, to which thirteen pages are devoted. There is an account of rubber belting in general, followed by detailed descriptions of the belting made by the company for grain elevator use, threshing machines, paper mills, etc., price lists of leather and rubber belting, and information of value on the use and care of belts, rules for calculating the speed of pulleys, rules for calculating horse power, how to splice belts and other similar information. Twenty-four pages are devoted to rubber hose, with an account of its manufacture; steam hose, which is an important product of this company, occupies three pages, with valuable tables and lists; one page is given to air-brake hose, two to fire hose, four to cotton hose and the "Leatherite" treatment of same, three to suction hose, seventeen to mats and matting, including the company's new patented rubber tiling, which they have supplied to the new steamers *St. Louis* and *St. Paul;* eight pages are given to packing, gaskets and tubing, and six to emery wheels. Considerable space is devoted to specialties of which a large variety are illustrated, together with remarks on vulcanization and mold work. Bicycle tires are briefly disposed of, as a separate pamphlet has been published on this subject. A double index, new and convenient in arrangement, gives the pages of both the lists and descriptions of articles. It is well described as "the most complete, comprehensive and rubber goods catalogue that has ever been issued."

The Perpetual Catalogue issued and distributed by the Michigan Stove Co., manufacturers of the Garland stoves and ranges, Detroit, Mich., is certainly the finest and most unique of its kind ever seen by us. It is in the form of a portfolio, made of heavy cardboard bound with green canvas, and fastened with a silver clasp which is stamped with the trade mark of the Garland stoves and ranges. The front of the catalogue is further ornamented by edging of a darker color, and still further enriched by the trade marks of the Garland and Michigan stoves and ranges in silver. In a pocket on the inside cover is a beautiful catalogue, the cover done in blue and silver, bearing the words "What Others Think Of Us," "Compliments of The Michigan Stove Company," the first letter in every word being printed red. The frontispiece of the book shows the officers and directors of the company, and scattered through its pages are views of the offices, salesrooms, and the different departments of the enormous factory, and giving an interesting account of all under the title of "A Visit To A Stove Foundry." The portfolio is provided with indexed compartments similar to those of a letter file, but instead of being indexed with letters they are marked as follows: "Steel Ranges," "Cookers for Coal and Wood," "Cookers for Wood Only," "Heaters for Coal," and "Heaters for Wood." In these compartments are found half-tone illustrations of the above named stoves. The manufacturers themselves say of the catalogue: "We take pleasure in handing you herewith what we can safely say is the most costly and complete stove catalogue ever issued. The half-tone plates are made from photographs direct from the goods themselves, therefore are exact *fac-similies*. They are of a size which will show the goods up to better advantage than the wood cuts usually used in price lists, and we think will be acceptable to all of our patrons." We heartily endorse the above statement.

The Steward & Romaine Mfg. Co., No. 123 North Sixth Street, Philadelphia, have issued a catalogue and price list of their single and double Patent Parallel Expansion Bolts, of which they make a large number of varieties. In a note of introduction describing these goods the company say: "We desire to call the attention of architects, engineers, builders, carpenters, masons, machinists, Hardware dealers, plumbers, steam heating companies, railing manufacturers, workers in iron, electric street railroads, electric companies, and all others whose business requires the use of fastenings of great strength, security and easy application, to Expansion Bolts. It will be seen that their greatest use is in places where it is not desirable or practicable to drill through the material to which the fastenings are to be made, and for such cases there is no better method of doing the work. It is an improvement on all other kinds of known fastenings. The facility with which they are put in and tightened will be found to make the completed work cost less than the old imperfect fastenings. This Bolt has also the very great advantage over every other fastening, that it can be removed with as much ease and facility as applied, and without injury either to the article fastened, that to which it was fixed, or the bolt itself. For fastening materials of all kinds to stone or brick work, screw eyes for trolley wire support for electric street railroads, guys for smoke stacks, fire escapes, vault lights, brackets for steam heating purposes, engine beds to masonry or solid rock, bridge work, window and door frames, cornices, elevator tracks in buildings, railings, signs of all kinds to store fronts, etc., nothing can be found to equal it."

We have received from Edward Darby & Sons, Pennsylvania Wire Works, Philadelphia, Pa., two catalogues, numbered 27 and 28. No. 28 is the revised catalogue for 1895. The firm make the following statement: "We present our revised catalogue for 1895 and trust you will find it of sufficient value to examine and preserve it for all your needs, both present and at any future time. Your attention is called to the numerous improvements and to the new articles which we have added to our extensive list of manufactures, and also to take special notice of the changes in our lists. We take pleasure in knowing the fact that we are receiving a large increase of trade from our old customers and also from many new ones, which is very gratifying to us, and assure those who intrust orders to us that it shall be our constant aim to endeavor to attend to the same promptly and satisfactorily." No. 28 is a 158 page publication and is devoted to everything in wire and iron, including the following: Brass bank work, radiator guards,

Digitized by Google

nursery guards, wrought iron gratings, spark guards, roof crestings, coal and sand screens, iron bedsteads, wire flower stands, sieves and riddles, adjustable window screens, screen doors, stable fixtures and a host of others too numerous to mention. Catalogue No. 27 is issued as an appendix to catalogue No. 24 and is dedicated to ornamental iron work, of which it shows many handsome designs.

David Williams, Nos. 96–102 Reade Street, New York, has published a work entitled "Domestic Electrical Work," a copy of which is at hand. It was written by William A. Wittbecker, and is a concise and practical explanation for plumbers, tinners and Hardware dealers, as to the proper wiring of buildings for bells, alarms and annunciators, and for gas lighting from batteries. It is illustrated with twenty-two diagrams. That there is a growing demand for simple electrical apparatus in dwelling houses, offices and workshops, and also a need of plain instructions whereby any person without a previous knowledge of electricity may be enabled to undertake their successful instalment, is a fact that will be generally recognized, and has prompted the publication of this book. "It is not intended," says the author, "for the amateur who seeks for nothing but experimental work, neither is it expected to enlighten the expert electrician; but to the person who is seeking for information that will assist him in increasing his daily earnings this little volume is addressed. The information given is above all else practical, and with a close observance of the directions laid down anyone without the slightest knowledge of electricity should be able to do the work described." The price in paper is 25 cents, and in cloth 50 cents.

The Remington Arms Co., Ilion, N. Y., have issued another of their always attractive arms catalogues, dated May, 1895. The cover is of grey linen paper, while the inside pages are of heavy calendared paper. It contains thirty four pages, giving illustrations and particulars concerning the justly celebrated productions of the Remington Arms Co.—guns, rifles, revolvers, reloading tools, sights for all rifles, bicycles and sewing machines. As a frontispiece there is a handsome picture of the armory at Ilion. In speaking of their hammerless gun the company say: "Sportsmen will find the Remington Hammerless Gun an exceeding strong and durable arm." Other qualities are enumerated, but we deem it unnecessary to mention them, as the productions of the company are generally recognized as standards of excellency.

Patterson, Gottfried & Hunter, Nos. 146–150 Centre Street, New York, are sending their friends a "cute" little card, the outer page of which shows a workman who seems to be very much dissatisfied with the file which he is using, and above his head are these lines:

"There's nothing stirs a fellow's bile
Just like a good-for-nothing file."

By raising a half leaf, we see the same industrious mechanic, with a very different expression upon his face. He seems to have found the tool for which he was in search, as described in the following lines:

"But if you want to see him smile,
Then let him use an Arcade File."

We have at hand an attractive announcement in form of duplicate cards, tied at the top with a bow of white ribbon. On the first page is a striking likeness of the late and highly esteemed John Adt, also his motto: "A good name is rather to be chosen than great riches." The second page contains the following announcement: "Having recently acquired the plant of John Adt & Son, which was established in 1866, we shall endeavor to sustain the reputation that the firm have made with the manufacturers in this and foreign countries as the originators and expert manufacturers of patent automatic wire straightening, forming and riveting machinery." Signed John Adt & Son, F. B. Shuster, proprietor.

The F. & N. Mfg. Co., Richmond, Ind., have issued an export catalogue of their Lawn Mowers and Grass Catchers. It is a convenient little sheet, illustrating and describing their F. & N. Lawn Mower, International lawn mower, Unique lawn mower, Universal grass catcher, etc. Of these goods they say that "every part is thoroughly inpected and tested, and not allowed to leave the factory unless perfect, and all parts are interchangeable, and can be duplicated in case of accident."

Among the recent trade publications received is a tasty little leather-bound catalogue, issued by the H. C. Tack Co., Cleveland, Ohio, and containing forty-four pages. It is indexed, which makes it very convenient. Besides giviving the prices of all kinds of tacks there is a table giving the weights of dozened Hardware list goods, also information pertaining to freight. The book is of a convenient size to be carried in the pocket and will prove of valuable assistance to tack purchasers.

Sidney Shepard & Co., Buffalo, N. Y., have issued a handsome catalogue of their Pure Aluminum Ware, which is illustrated in a highly artistic manner. They will be pleased to send a copy to any who may have use for the same, and as the use of aluminum ware is rapidly growing it would be to the advantage of any dealer to thoroughly post himself concerning the same. This catalogue shows a full line of kitchen utensils, with prices, descriptions, etc.

The Nubian Iron Enamel Co., Chicago, are sending their friends their calendar for the succeeding six months of 1895. The contents of the same fully carry out the description upon the cover, which speaks of the calendar as "A Compilation of Wise Saws and Poetic Thoughts, mixed with a large amount of Idiotic Nonsense, all for the laudable purpose of throwing Light upon a Dark Subject."

The Wells & Coutan Co., New York, are sending their friends a very attractive circular imitation of a steam gauge, upon the back of which is entertaining matter of a descriptive character, showing the specialties in this line which they manufacture.

John H. Bryant, No. 61 Michigan Street, Chicago, has issued a catalogue of his Mixing and Beating Machinery, Queen City presses, etc. The various articles which come under this heading are illustrated and described, with prices attached.

It Never Soaks.

The Standard Fiber Ware Co., Mankato, Minn., have certainly adopted a very effective object-lesson for the benefit of dealers who push their wares. They are sending out with orders, unfinished basins upon each of which is the following tag:

KEEP THIS IN SIGHT,

Replenished Daily with BOILING WATER, to show your Customers that even Unfinished "STANDARD" Fiber-Ware NEVER SOAKS.

If this demonstration does not convince purchasers, nothing can.

The Penn Hardware Co., Reading, Pa., have ordered the necessary machinery for a screw plant which will occupy one of the large buildings on Spruce Street. Between thirty and forty men will be employed at the start.

SPECIMENS OF YALE STYLO-CHISELRY.

In the issue last preceding we had the pleasure of describing the new line of goods added by the Yale & Towne Mfg. Co., Stamford, Conn., and New York, under the name of Yale Stylo-Chiselry. We take pleasure in this number in presenting some detailed description of the same with illustrations. This work is particularly adapted for tablets, whether ecclesiastical, military or general. In Fig. 1 we show a sample of the first named. Of work of this character the company say:

ECCLESIASTICAL TABLETS.

"The art of designing and executing mural tablets in metal and stone attained its highest development during the period of the Renaissance. Beautiful examples of this art, perfect not only in ornamentation but equally in the sister art of appropriate lettering, are to be found scattered through the churches and older public buildings of Europe, but as yet good examples of such work are regretably rare in this country. How few churches are there here where one can find inscriptions, memorials or lettered work of any character appropriately rendered. It is either severely plain and stiff or else, where ornamentation is attempted, it is too often overdone or meretricious. Most notably is this true of lettering, an art certainly old enough to deserve better treatment at our hands, and whose principles of dimensions and proportion are established with almost mathematical precision. The same comments will apply to the rendering of insignia and illuminations of altars, walls and tablets. With a wealth of available symbols, conventional but appropriate, they are as a rule ineffectively, if not inappropriately, introduced and yet more poorly rendered.

"Yale Stylo-Chiselry is most admirably adapted to the execution of work of this class, and special effort has been made in order to do it justice. The most careful study and preparation has been given to the production of memorial brasses, and in connection therewith the whole history of Christian symbolism has been studied and classified; special alphabets have been designed, which are both artistic and consistent; and all the various ecclesiastical insignia have been correctly rendered in forms available for their proper usage. In this field of work the importance of correctness of design and of accuracy in rendering will be understood by all who are qualified to criticise, and those to whom the selection of such work is entrusted will find here that these essentials are met in the most perfect and artistic manner.

MILITARY TABLETS.

"No larger field for the employment of memorial brasses has been found than to commemorate the deeds of men who have served their country on the field of battle or on the decks of its men-of-war, especially where these have laid the tribute of their lives on the altar of patriotism. Enduring records of this kind need not be confined to costly monuments. It is equally appropriate in all cases, and more feasible in most, to commemorate such deeds by memorial tablets in bronze set up in appropriate places. Such tablets, made thus of permanent material, will not suffer from exposure, and therefore may be used either within appropriate buildings or for insertion in the faces of monuments or the external walls of public buildings. The heritage of such names belongs not only to the family and friends of those who are gone, but to the community in which they lived. It is most fitting therefore that tablets commemorative of those who have borne an honored part in the military or naval service of the country should, in design and execution, be worthy monuments of those to whom they are dedicated, and should be erected in places where they may permanently be seen of all men. The numerous and elaborate military memorials which have been erected in various parts of the country bear evidence of the desire on the part of the living to perpetuate the memory of the dead soldiers to whom such monuments have been dedicated. These monuments, however, usually fail to accomplish the one thing which it is essential that they should do, namely, to furnish a detailed record of the individuals to whose memory they have been erected. The erection of collective monuments to companies of nameless men has doubtless heretofore been due to the prohibitory cost accompanying the engraving of many

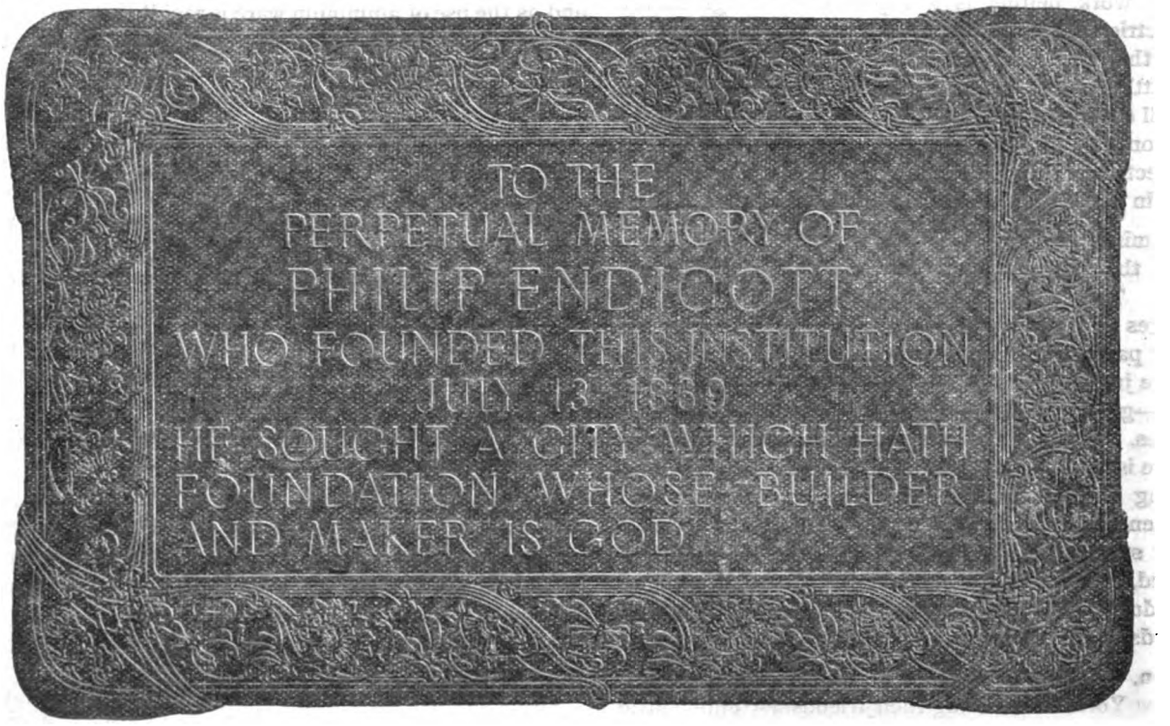

FIG. 1.

Digitized by Google

names, but by means of Stylo-Chiselry that obstacle has been fully overcome.

"Committees having the construction of such memorials in charge, as well as architects engaged in submitting designs, may now proceed in full knowledge that tablet work is entirely within the limits of reasonable estimate and execution. As an example of what is actually meant by this statement it may be mentioned that in a monument in the city of Cleveland, Ohio, it was proved to be possible to engrave the names of ten thousand soldiers and sailors, in fact the name of every man who went from Cuyahoga county to the front to fight for the preservation of the Union.

HISTORICAL TABLETS.

"Within the past few years, through the chance discovery of a few inscriptions, we have become aware of the former existence of a nation whose name had never been mentioned for more than two thousand years, although it had risen earlier and endured longer than Assyria. This is but a single instance of the importance of entrusting historical records to some more enduring materials than aniline ink and chemically bleached paper; the neglect of graven records being a matter of constantly increasing importance when the rapid deterioration of modern writing materials is considered. It has been estimated that before the end of the twenty-third century almost the entire literary product of this generation, including its public and private documents, will have mouldered away as a result of the use of poor ink and worse paper; and while this fact may not be viewed with feelings of unmixed regret there are some documents which we would not willingly see perish. In the belief that there exists a great need for practical methods of producing permanent records provision has been made to supply it, and we are now prepared to produce by means of Yale Stylo-Chiselry, upon brass, bronze, copper, marble or other enduring materials, records of historical facts, laws, regulations and declarations, deeds, contracts, wills, genealogies and inscriptions.

GENERAL DECORATIVE WORK.

"By far the widest range of applications of Yale Stylo-Chiselry will be found in general decorative work in the interiors of public buildings, residences, hotels, club houses, and indeed, in all places where rich and artistic decorative effects are desired. The illustrations devoted to this branch of the work will be of especial interest to architects, placing in their hands yet another means for adding to the richness of their designs by what is practically a new means of interpretation of the effects which it may be desired to produce. For such purposes the applications of Stylo-Chiselry are practically endless." A specimen of this line of work will be found in Fig. 2.

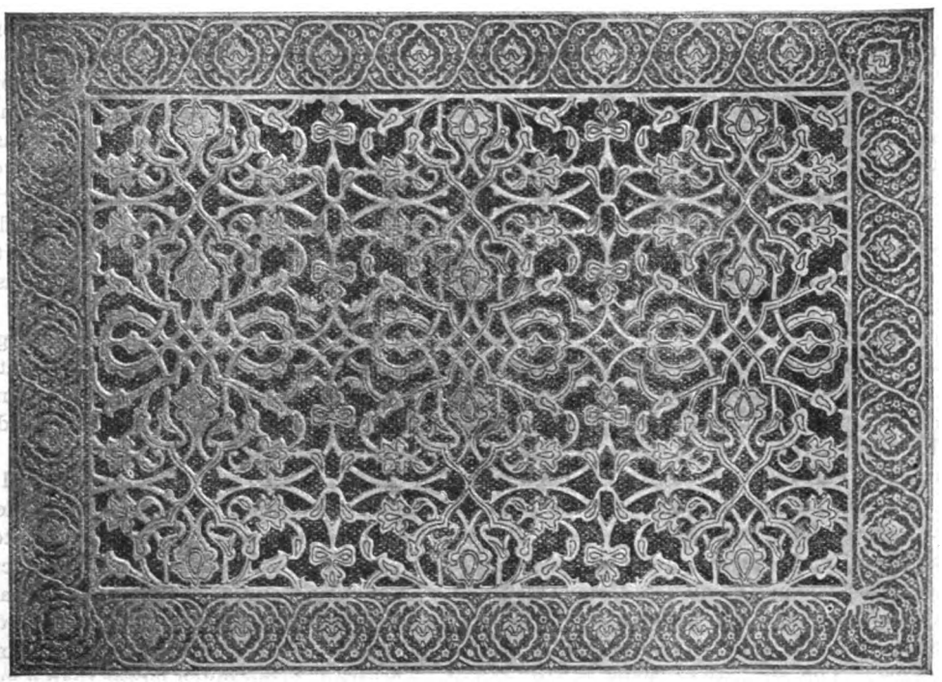

FIG. 2.

Advances in Wages.

The Newton Machine Tool Works, Philadelphia, have advanced the wages of their employees ten per cent.

The Aetna Nut Co., Southington, Conn., have increased wages seven and one-half per cent.

Employees of Fayette R. Plumb, manufacturers of edge tools, hammers and sledges, railroad, miners' and blacksmiths' tools, Philadelphia, have been made happy with the announcement of an increase of ten per cent. in their wages. Mr. Plumb says that he makes the increase in consequence of the improved condition of business, and the prospect of better prices in the near future.

An increase of ten per cent. in wages has gone into effect at the nail mills of the Norton Iron Works, Ashland, Ky. A like increase is to be effective in sixty days. Both are voluntary with the company. The present trade with the plant is the best that has been had in ten years past.

The Providence *Journal* says: "The Nicholson File Co. has a notice posted in its works, both at Providence and Pawtucket, R. I., announcing to its employees the cheering news of an advance in wages. This action, voluntary on the part of the company, is but another indication of the sure return to prosperous times and shows a disposition on its part to better the conditions of its help whenever the business outlook warrants it. Upwards of 1000 hands are affected by the increase."

Aluminum wire is increasing in use, and if it continues to cheapen may be the wire of the future. Its electrical conductivity is three times that of iron, and more than half as great as copper, while its tensile strength is one-third that of steel, and its resistance to corrosion phenomenal.

The American Handle Co., of Grand Rapids, Mich., with factories at Augusta, Kalamazoo county, and Bridgeport, Ala., filed a notice that it has disposed of all its interests and is not now acting as a corporation under the laws of Michigan.

Review of the Markets.

Money: Bank exchanges indicate a large volume of midsummer business, but trade activity is less pronounced than it was. Crop news continues favorable and speculative markets have a downward tendency for breadstuffs and cotton.

Money continues in abundant supply, but there is less disposition to invest in commercial paper, and the result is that rates are from ½ to 1 per cent. higher.

Hardware: The general trade is somewhat dull, though not as dull as it is expected to be at this time of the year. A good demand for fall goods is anticipated, and it is expected to set in earlier than usual. Little complaint is heard from the trade on account of higher prices prevailing, except possibly in the case of nails. Cards from manufacturers announcing advances in the list prices are quite common and are expected. Higher prices are influenced as much by increased wages as by the raise in the cost of raw materials.

Cutlery: There is an increased demand for imported goods, and trade may be said to be in better condition than for some time past, but as yet a good many dealers are on their vacation and have not yet settled down to fall business, which is expected to be exceptionally good.

White Lead, Red Lead and Litharge: The following quotations are subject to change without notice: White Lead, dry or in oil, Red Lead and Litharge in kegs:—In lots of less than 500 pounds, 6 cents net; in lots of 500 pounds and over, 5½ cents.

Zinc: Values for the present are 4@4½ cents, as to quality and quantity, for jobbing parcels.

Putty: The market remains steady at $1.45@$2.25, as to qnantity, package and place of delivery.

Linseed Oil: Quotations are 59 cents per gallon for raw and 62 cents per gallon for boiled.

Wire Nails: At the meeting of Wire Nail Manufacturers' Association, held in Boston, July 18th, the prices of Nails went skyward. An additional advance of 50 cents per keg was declared as the August price, and all sizes larger than tenpenny carry the same extras as tenpenny. The prices are now: for carload lots, $2.05 per keg, f. o. b., Pittsburg; less than carload lots, $2.15 per keg, f. o. b., Pittsburg. The New York quotation for carload lots of Wire Nails on dock is $2.20 and small lots from store $2.30. Manufacturers state that Nails are being bought freely at the present prices, and that they have received numerous inquiries for August. The scarcity of Nails is still one of the features of the market.

Cut Nails: The raise in prices has likewise extended to Cut Nails, the advance being the same, 50 cents per keg. Prices are as follows: Carload lots, Pittsburg, $1.80; less than carload lots, $1.85. New York prices are: Small lots from store, $2.10; carload lots on dock, $1.95.

Nuts and Bolts: The Nut and Bolt manufacturers held two sessions, one on July 9th and one on the 11th, and decided to make a raise of 10 per cent. in prices.

The prices quoted below are for small lots. Round lots, except Tobin Bronze, can be purchased at lower prices:

Copper.

Clapp & Co., bankers and brokers, New York, in their weekly letter, say: "Units of power or profit are limited by the sources of renewal. Like the drops of water on the wheel, they must keep coming. The tendency is to produce more for comfort than for profit. Dollars now have to be very plenty and very good to make dividends possible. The profits of the future, like those of the past, must be won by developing more power. Using what we have to the limit of our knowledge should not prevent the faith which has never yet been denied creative energy. Straws. —858 new enterprises were reported in the South for three months ending June 30, 1895, Available supply of wool is estimated at about 4,500,000 bales, or about average of three years. Estimated United States is debtor to other countries for interest and miscellaneous account net average of $70,000,000 annually. Estimated aggregate domestic debts are about $18,000,000,000. Dry goods imports January 1st to June 28th were valued $74,213,574, against $41,653,047 last year, and $73,726,559 in 1893 same time."

THE DAVENPORT TRADE.

On the 10th of July the Hardware jobbers in the "City by the Lake" unanimously agreed to discontinue the time-honored custom of charging for package and cartage. The example was followed by at least one jobber in each of the great cities of Dubuque and St. Louis on the 15th. Of course we are not charging "case and cartage" now, but confess it does not give us the pleasure to make this announcement that it seems to have given some of our competitors. A Chicago house, in a printed circular, states that the circumstances justify this radical measure, and expects to materially increase its trade thereby, but does not make it quite clear just how it expects to divert trade from natural channels if dealers in other cities do not make a charge for this item. The reason given by a St. Louis house is the pleasure it takes in printing this information, but does not state why such enjoyment was not sought before "circumstances" made this "radical measure" necessary in Chicago.

Since writing you of the continued drouth that was becoming alarming there has been a decided change in the weather, the rain fall for the last ten days aggregating nearly four inches. Our principal crop is corn. The recent rains, coming as they have just at the critical moment when most needed, practically assured an average yield.

A noticeable change in the footings of our sales' columns is observed, being much larger than a year ago at this time, which is explained largely by the enhanced values, but partly from the fact that we are disposing of more goods.

The advanced prices are well maintained, and indications point to further advances, not only on the heavy staple articles, which have felt the changes first, but on most goods in the Hardware line. As one of our competing neighbors writes us "Let the good work go on."

Sickels, Preston & Nutting Co.

THE BALTIMORE TRADE.

Our Commercial Renaissance! That is properly the only word which adequately covers the present condition of trade. Returning confidence, revival in the demand, resurrected resources and rising prices—what more is wanted? The resiliency of the bicycle tire is not "in it" with the recuperative power of the American people. Were such a condition confined to one locality it would be called a boom, and partake of the same ephemeral existence which was accorded those inflated bubbles a few years ago; but so general has been the improvement from the lakes to the gulf, from ocean to ocean, the undercurrent of the thinking public is that we stand in the dawn of a new era. Its possibilities are startling.

In the past twenty-five years the merchant of this country has seen the profit of his business almost entirely wiped out by the shrinking in value of his stock—decline following

decline so rapidly that it was no unusual thing for the jobber to be compelled to unload certain lines of goods much below actual cost, in order to keep his stock moving at the market value. Every depreciation meant so much loss on stock on hand. A new order of things has arisen within the past sixty days. The market has taken an upward movement. From the raw material with its phenomenal advance, labor with its higher wages, on to the different stages of manufacture, higher prices rule. If these advances are made moderately, based upon the higher cost of production and a living profit added thereto, they will work a permanent good; but if fictitious rises are effected either by pooling interests or individual effort, such inflation will surely react disastrously. Between a true and false value there lies a barrier, which, like the magic circle drawn by Richelieu, cannot be crossed without bringing condemnation upon the transgressor. The era of Buncombe is passed —manufacturers seem to realize this. The advances so far have been moderate and consistent, with the possible exception of Nails. These have been called the barometers of trade. They certainly have some points in common with thermometers. Under the influence of the recent hot spell, they passed the 100 degree Fahrenheit; at present they hover between the 150th and 200th degree. It is safe to predict, if the mercury keeps on mounting, the top of the tube will be blown off. One of our poets sings:

"Oh! For a quiet pool."

He evidently was not familiar with this Nail Pool.

For the month of July, trade has been very good; considerable in excess of last year, and under better conditions. While little has been done in the way of anticipating wants on regular fall goods, the general dealer is disposed to look ahead to some extent. Such lines as Coal Hods, Shovels, Pokers and Tongs, Galvanized Buckets, etc., will bear watching. The Edge Tool makers have made some advances; Hammers and Sledges are higher, as also Copper Rivets and Burrs. Wrought and Bright Wire goods, Butts, Hinges and Bolts all show advances more or less marked.

Collections only fair to middling.

THE TABB & JENKINS HARDWARE CO.

THE BOSTON TRADE.

Midsummer dullness has naturally lessened the volume of business throughout New England, but from reports among the trade it is even better than was anticipated, and the months of July and August will undoubtedly be an improvement over last year.

Staple goods are strong in prices, and customers seem to have an eye open for such goods as have been sold at ruinously low prices, and even at the advanced quotations orders are being placed in anticipation of future wants.

The recent advances in Wire and Cut Nails, Butts, Copper Rivets and Burrs are being well maintained. Collections are up to the average. FRYE, PHIPPS & CO.

THE CLEVELAND TRADE.

The active demand for Hardware seems to have met with a slight check, which is due to the usual summer dullness. A large number of traveling salesmen are now taking their vacations, and the effect of their absence from their routes is felt in diminished orders.

So far as we can look into the future, however, everything is encouraging, and we can see no reason to alter the views expressed in our previous communication. Values are well maintained and there is a decided tendency on the part of all manufacturers to advance prices, and if advances are not actually made there is at least a much firmer feeling than has been the case heretofore.

Nails continue to be the sensation of the market, as the makers have put another advance upon them, evidently with the idea of recovering some of the losses that they have sustained during the last two or three years. We are inclined to doubt the wisdom of their policy and fear that

Digitized by Google

the prices thus artificially made and sustained will not bring them as substantial prosperity as a more moderate policy would have produced. It seems to us that their present action tends to encourage competition to enter the field and dispute it with them, and that instead of improving the condition of the wire nail trade it will ultimately have the effect of putting it into worse condition than it has ever been.

Our collections continue very satisfactory, and all things taken together the outlook may be considered a good one.

THE MCINTOSH-HUNTINGTON CO.

THE PHILADELPHIA TRADE.

Prices are still going up with the July mercury. In fact, the mercury is so far behind, as it has been rather low for this time of year, while prices are advancing steadily to a normal level. The incredulous who have all along discounted advances and discouraged them, saying they could not hold, are now in the small minority, and there is a growing belief that we have seen the bottom, and that the depths of that pit will not be seen again for some time to come. It is generally conceded that the prices of six months ago were below cost. Such a condition of affairs could not be expected to continue, and a general feeling of hopefulness now pervades the trade, that we are entering upon a better condition of things, and for this we owe no thanks to Congress or the politicians. Almost all business men will decry any effort to tinker with the tariff, or do anything to upset the present conditions. It is all very well for newspaper editors, lawyers, college professors and theoretical men to talk Protection or Free Trade, and to advocate agitation one way or the other. Of course, the newspapers must have something to talk about, and it is food for their columns whether they are talking for Free Trade or Protection. What the business man most urgently desires is told in the words of our late great captain, "Let us have peace." If politicians will only let us alone, and if Congress will kindly refrain from assembling, Thanksgiving Day will be much more earnestly and sincerely observed in November.

The advance of the week has been both Wire and Cut Nails, which advanced on the 18th 50 cents per keg, with every prospect of the advance being permanent. It had long been prophesied that Nails would reach the $2 mark in August, and results have justified the prediction. There is a general stiffening in prices on other goods, and it is but reasonable to expect that many other goods will follow the impetus in the early fall.

From many sections come reports of encouraging character, and while some parts of the country are slower to feel the incoming tide than others, still there is little doubt that the entire country will share in the revival of business. Collections as yet are only fair. The country is poor—desperately so after the last two years of depression, but there is hope in the American people, and all are going earnestly to work hoping for better things.

BIDDLE HARDWARE CO.

My dear, dear Lord,
The purest treasure mortal times afford
Is spotless reputation---That away
And wheels may be painted iron or gilded clay;
An honest cycle that has stood the test,
Is the famous one with the Humber crest·
In quality is its fame; both grow in one;
Take quality from it and its fame is gone.

HUMBERS have been the favorite Bicycles of two generations of riders. They are still the - - STANDARD.

Humber & Co., America, Ltd.,
No. 318 Broadway,
New York.

Rating Nails: A Suggestion.

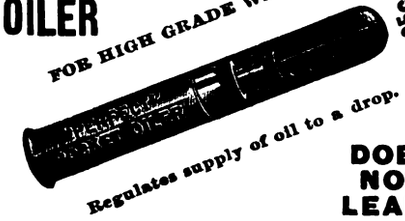
EDITOR HARDWARE: Mr. Harbeck, one of our stockholders and traveling salesmen, desires us to write to HARDWARE that the present mode of rating nails, works an injustice to the retail Hardware dealers in this way: Nearly every newspaper in the country quotes the base price of nails. The customer reads this quotation based on sixty-pennies; wanting a keg of three-penny nails, inquires the price. Now, supposing the quotation he has reads $1.75, and is told by the local dealer that the price of threes is $3.50, which, adding freight and a small profit, would be a fair price, he at once concludes that he is paying a hundred per cent. profit. Mr. Harbeck suggests that printed quotations should rate down from threes instead of up from sixties.

SICKELS, PRESTON & NUTTING CO.

Davenport, Iowa, July 22, 1895.

C. A. Griscom, Jr., manager of the International Navigation Co., has written a letter to the Holmes & Edwards Silver Co., Bridgeport, Conn., expressing entire satisfaction with the workmanship and quality of the silverware supplied by the company for use on the steamer *St. Louis*.

J. E. Smith, secretary of the Simmons Hardware Co., St. Louis, has sailed to Europe, on a tour of combined business and pleasure.



Articles of association of the Valley Hardware Co., Saginaw, Mich., have been filed. The capital is $10,000.

Side Lines Offered.

WANTED—Traveling salesman to take a good line of white metal spoons and forks and other novelties as a side line on commission. Call or address M. L., Room 1, No. 221 Fifth Avenue, Chicago, Ill.

Just What Every Manufacturer Wants!

The Reference Book

OF THE

Hardware and Kindred Trades of the United States and Canada.

THE Book contains, in the most condensed and convenient form possible, the Names and Ratings of all firms in the following Trades in the United States and Canada:

Hardware Dealers.
Dealers in Sporting Goods, Bicycles, Firearms, &c.
Agricultural Implement Dealers.
Stove Dealers.

Sent (Postpaid) on Receipt of

TWO DOLLARS.

CERTAIN marks are printed after each name, showing the line or lines of goods handled.

The work is complete, condensed and convenient, and will be found especially desirable in sending circulars, on account of the street numbers. The ratings enable the user to select names of any specified rating or over that may be desired.

In cities the lists are classified—Hardware dealers all in one condensed list, Stove dealers in another, etc. In most cases, in the Hardware list, are specified the special kind of Hardware handled, as Shelf Hardware, Cutlery, etc.

Samson Anvil.

This Anvil combines an unusually handsome design with great strength and a very fine temper and finish. The face is of crucible Cast Steel, much heavier than that generally used. The horn has a solid point and a facing of tough untempered steel with a long heavy shank, welded underneath to the steel facing.

The line "A" of the outline cut shows the facing of the horn and the dotted line "B" shows the shank welded to the facing plate and extending into the anvil.

The body of the anvil is of tough Cast Iron. The facings are very thick and heavy, giving strength to the anvil and solidity and durability to the parts in general use.

Owing to a novel and patented process, and skill in the welding of these heavy facings to the cast iron, we are able to produce an anvil which will successfully stand the most severe use. The temper is of the very best character, the face is true and highly polished, and the finish is superior. Every anvil is guaranteed.

We aim to furnish an anvil excellent in every respect and at a low price.

PRICES QUOTED ON APPLICATION.

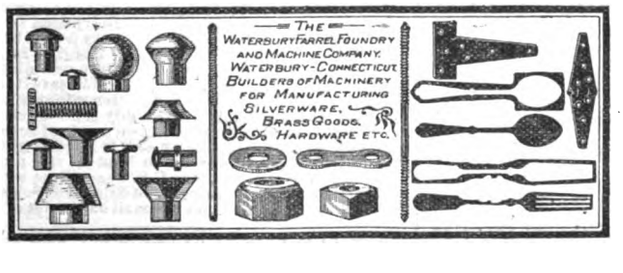
The Conroy patented New Automatic Refrigerator Door Fastener, with lock and key.



THIS FASTENER is the most complete one ever invented. The door will push to more easily with this Fastener than any in the market. The Fastener will tighten the door by the door closing. It is the most substantial; nothing about it to get out of order. By lifting the handle quarter circle the door will open, and if it sticks it will release it. It has a new and improved lock, absolutely secure. Made for flush or raised doors, composed of brass or bronze metal in any finish desired, plain or ornamental.

A Stove With No Smoke.

A stove without a stove pipe is a novelty that has reached this city from Sweden. It was imported by Nils Herlitz, who has exhibited to all of his friends. It burns anthracite coal and coke and consumes its own smoke and gas. It does not resemble a stove very closely, and when not heated would be taken for anything else than a stove. The heaters are made, so Mr. Herlitz says, of all sizes. This one is three feet high and one wide, and is of blue polished Swedish iron, finished and trimmed in nickel-plate. It is now burning one bushel of coke in thirty-six hours, and heats about 9000 cubic feet of space, equal to four common rooms in a dwelling. It is on wheels and can be shoved to any part of the house, from one room to another, with as much ease as moving trucks.

If such stoves are ever introduced in this market it will advance the coming of the millenium, inasmuch as the man who usually puts up the stove pipe will be relieved from the cause of profanity. There will then be no more sootey flues, smoking stoves or disorganized households because the fires are all out. There will be no fires from defective flues.

The invention is a new one, but the patentee has already sold 22,000 in Sweden. So great has been the demand that they were compelled to enlarge the factory. They are made at Eskelstuna, Sweden. The place is called the Sheffield of Sweden. This is the first and only stove of the kind imported to this country.—*Memphis Commercial-Appeal.*

The North Bros. Mfg. Co., Philadelphia, Pa., for whom John H. Graham & Co., No. 113 Chambers Street, are the New York agents, are offering to the trade the U. S. Dial Scales, which are sure to be in demand for canning purposes, to weigh fruit and sugar, and are also useful in the kitchen all the year around for weighing all sorts of things.

"Mosaic" (TRADE MARK.) Enameled Stove Boards.

OFFICES AND SALESROOMS:

NEW YORK, 260 Canal St. | CHICAGO, 225 Fifth Ave. | PHILADELPHIA, 249 S. Second St. | BOSTON, 90 Canal St.

FACTORY: BELDING, MICH.

TO THE TRADE.

BELIEVING there is a demand for a superior line of Stove Boards and judging from the success we had last season with the "Mosaic" Enameled Board, we think it would be to your advantage to look at our samples before placing your order. We carry a full line of stock in our New York, Philadelphia and Boston salesrooms, and will be glad to answer all inquiries and quote prices.

POINTS OF EXCELLENCE.

The Plates used for our Enameled Stove Boards are 20 per cent. heavier than used on any other Stove Boards manufactured.

It Requires a temperature of 240 degrees to finish them, consequently the enamel is indestructible.

Washing or heating will not injure the surface.

The Most durable, the handsomest and finest finished Stove Boards on the market.

Tripoli Stone Block System.

Set up ready for use. There are two crocks, each of four gallons capacity—an upper one holding the Filter Block, and the lower one, which can be used as a water cooler if desired. This Block is four inches in diameter by the same in height, and is hollowed out on inside. This fits on a metal tube, which fastens by means of a nut to bottom of Filter Jar. Block can be lifted off tube, cleaned and replaced in two minutes, and with no trouble at all. Water passes from outside of block, through the walls, into the hollow chamber, and from thence, by the means of the Drip Tube, into the lower receptacle.

The Finest Piece of Salt Glazed Stoneware Ever Offered the Public.

ORANGE SPORTING POWDER, MANUFACTURED BY LAFLIN & RAND POWDER CO.

ORANGE RIFLE EXTRA, ORANGE SPECIAL, ORANGE DUCKING, ORANGE LIGHTNING.

The attention of TRAP AND FIELD SHOOTERS, RIFLEMEN AND DEALERS IN GUNPOWDER, is called to the new ORANGE SPORTING POWDER, patented April 17th, 1888, and branded ORANGE RIFLE EXTRA.

This Powder is quick and strong, and burns with such perfect combustion that the only residum left in the barrel after shooting is a dark oily substance easily removed While this Powder is not exactly SMOKELESS, it gives only a light bluish smoke, which is almost instantly dissipated, and interferes but little with the shooting of the second barrel, taking the place of the so-called smokeless powders in this respect.

This brand of powder sells at the same price as any other brand of Rifle Powder and is superior to any made. No person who shoots can afford not to give it a trial, as after once trying it he will never use any other Powder when he can obtain the ORANGE EXTRA. Weight and quality guaranteed.

MILITARY, MINING AND BLASTING POWDER.

LAFLIN & RAND POWDER CO., - 99 Cedar Street, New York City.

PLACE THE MATTER CLEARLY.

To make a man realize an idea as you realize it, is what is necessary to make him understand his needs. Advertisements should aim to place a matter so clearly before the public that they see it as clearly as the advertiser does.

Digitized by Google

IT TAKES A PULL

to separate the plies of our rubber belting. A yoke of oxen can do it, but hard service won't, so strong is the friction. Our belting is uniform in width and thickness, consequently more of its surface comes in contact with a pulley. That means

NO WASTE OF POWER.

Rubber belting is never injured by water, hence it is best for out-door use, for wet localities, and for mills where the atmosphere is surcharged with moisture or steam, as in paper mills, tanneries, etc. Buy the durable kind, branded 1846-Para, Double Diamond or Carbon, made for 50 years by the

NEW YORK BELTING & PACKING CO. LTD

The PUTNAM Hot-Forged and Hammer-Pointed Horse NAILS

Are made in Sizes and Styles as below:

TURF NAILS, Nos. 1 to 5.

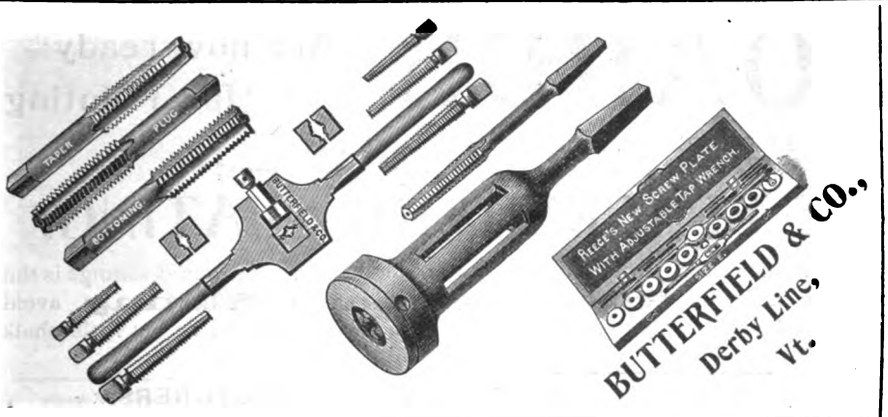
FRENCH HEADS, for punched shoes without creases, Nos. 3 to 7.

REGULAR HEADS, Nos. 5 to 14.

CITY HEADS, for shallow creased shoes, Nos. 5 to 9.

COUNTER HEADS, or FROST NAILS, Nos. 5 to 9.

Prices of these styles are the same as for Regular Heads of the same size.



The **only** Horseshoe nails in the world made precisely the same as the old-fashioned, hand process, being exclusively **Hot Forged and Hammer-Pointed.** This **hammering** (not pressing, rolling or shearing) while the metal is at welding heat blends all the particles into a compact, firm nail that outwears all others and will **Never Split, Sliver or Break.** *They are not sheared but have smooth edges clear to the point.*

The attempts of other manufacturers, in their advertising, to identify their product with the Putnam Nail leads us to state that the PUTNAM NAIL is made SOLELY by us in the ONLY RATIONAL WAY a GOOD horsenail can be produced.

Nickel-plated Mascot Ring for 10 Cents in Stamps or Silver.

PUTNAM NAIL CO., - Neponset, Boston, Mass.

BLACKBOARDS

Are now ready for Painting,

AND THERE IS BUT ONE ARTICLE WITH WHICH TO PRODUCE A SATISFACTORY RESULT, AND THAT IS

THE LAWRENCE BLACKBOARD SLATING.

This slating will not glaze, scale or blister when properly applied. The great fault with other liquid slatings is that they produce either too smooth or too rough a surface. **The Lawrence Slating** avoids both faults and produces a slightly rough yet black surface, that can easily be written on, which takes up but little chalk, and from which erasures are easily made.

CIRCULARS AND PRICE LISTS ON APPLICATION TO THE MANUFACTURERS.

Send for Catalogue C 2 illustrating them, and other Mounted Grindstones, Scythe Stones, &c.

THE CLEVELAND STONE CO.,

Hickox Building. **Cleveland, O.**

STANDARD FIBER-WARE COMPANY. STANDARD TRADE MARK. MANKATO, MINN.

WE PAY THE FREIGHT.

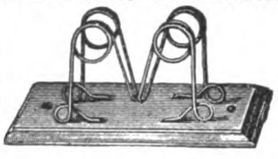
Instead of trying to crowd our goods upon an unwilling market the past two years, we have been working for better processes—to make **better goods for less money,** and now "we have got there with both feet." Our **pails are larger** than other makes, yet **cost no more.** Made of **strong fiber, wound,** and **steel bound,** they don't split open, nor chip off at edges. They have a **chime** you can **catch on** to, and a truss bottom that don't warp, loosen or leak.

All "Standard" Pails, Slop Jars, Spittoons, Wash Basins, etc., are **water-proofed** and **indurated throughout** by our newly applied process, and are **absolutely unsoakable.**

An **Ebony enamel,** hard and smooth, gives "Standard" ware an **attractive** appearance, and a **durable** finish. **Scores of families** in every county will use it largely if it can be got "at the store." **Do you want their trade?** Lots of 100 lbs. or more, delivered f. o. b. cars, at their depot, to all responsible dealers.

TIME WILL TELL.

A constant dropping will wear a rock. Keep dropping your advertisement on the public through



HARDWARE,

and they will soon melt under it like rock salt.

TO KEEP A BROOM

Use the **COMMON SENSE BROOM HOLDER.** It keeps a broom dry, keeps it in shape, keeps it from rotting. **Holds a Broom either end up,**

BEST IN THE WORLD.

PERSISTENT

Enterprising people are beginning to learn the value of advertising the year round. The persistency of those who are not intimidated by the cry of "dull times," but keep their names ever before the public, will surely place them on the right side in the end. Think over the persistent advertisers you know.

Iron & Brass Rivets,

STUDS, PINS, SCREWS,
&c.,

For Manufacturers of Light Hardware.

BLAKE & JOHNSON,
WATERBURY, CONN.

American Lead Pencil Co.,

429 Broome Street, New York.
110 Cheapside, London, England.

113. "CARBON" PENCIL.

TO obviate that tired feeling and dull pain in the fingers, which invariably accompany the use of the ordinary black lead pencil whenever too much pressure is brought to bear or it is used any length of time, and at the same time to produce an article that is very smooth, very black and very firm, thus adapting it for all kinds of work where a fine, smooth, black and legible mark is required, this pencil cannot be too highly commended. For writing on soft paper it surpasses anything heretofore produced; and for sketching, draughting and heavy shading it is indispensable.

Dozen mailed on receipt of 50 cents. Samples, Catalogue, Information upon Application. Address
American Lead Pencil Co., 429 Broome Street, New York.

HOUCHIN'S

POPULAR SPECIALTIES

Consist of Wax Tapers and Torches for Lighting Gas, Alcohol Stoves, 20 Styles, Gas Heaters and curling Iron Heaters, & Insect Powder Guns and Bellows, &c.

The AMERICAN WICK is made on scientific principles. The gum inherent in the natural cotton is taken out, and no expense is spared to produce a wick that will give THE GREATEST ILLUMINATION.

THE
AMERICAN WICK
Made by the
WICK DEPARTMENT
Of the STANDARD OIL CO. of NEW YORK.

Oil drawn up through the AMERICAN WICK burns with a large, clear, white light and the flame does not drop off in size as it does when a poor wick is used. When the cotton is clogged with its natural dust and gum the full illuminating power of the oil is not obtained and the complaint is heard that the light DROPS.

THE ORIGINAL IS THE BEST.
ROYAL CENTRAL DRAFT LAMP.

This Lamp has no Superior in the known world.

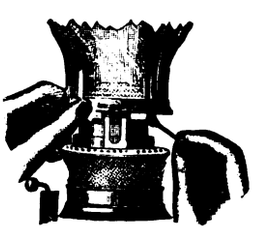
Gives the Largest Light for Wick Exposure of any Lamp made.

ROYAL LAMP.—No. 1013.

Chimney Lift and Wick Raising Device the best and easiest of adjustment. There are many imitations of these improvements, but the **ROYAL** is still the best.

The Royal Chimney. Lift will stay in position while lighting the lamp without support from the hands. This no other lift device will do.

The Wick Raising Device of the Royal Lamp is unquestionably the best, and has the approval of our largest competitors by their practical adoption of it.



The Wick can be adjusted more accurately and more easily than by any other device.

Workmanship, Style and Finish are unsurpassed. Made in all finishes of Stand, Table and Banquet Lamp. No better lamp for the dealer to handle.

The Plume & Atwood M'f'g Co.

29 Murray St., New York **199 Lake St, Chicago, Ill.**

The

B & H
LAMPS.

—Easy to Light—

—As Gas.—

For they are made with the PATENT LIFT ATTACHMENT, as shown above, by the use of which the Lamp can be lighted without removing chimney or shade

Lift the Ring that holds the Chimney, apply the match, and let the Ring drop back to place

—"The B & H"—

Is the only Lamp made with DOUBLE CENTRE DRAUGHT. This feature produces Perfect Combustion, the result being the Brightest and Best Light. They are made in the Largest variety of styles and Handsomest Finishes

Who first called a crowbar a crowbar? This conundrum is still unanswered.

The saying "hard as nails" can be appropriately changed to "as high as nails."

There are a great many business men in America, who are hoping that Congress may forget to convene for a couple of years.

The story now comes that a ship is to be constructed that will cross the Atlantic in three days. This feat is probably an impossibility, and perhaps it is best so. Three days upon the ocean is not long enough to get the malaria out of one's system.

Each year is, of course, historic, in that it joins the past and the future, and the happenings that lie within it, have their influence upon the course of after events. But some years there are, which stand out distinctly, as turning points in the world's career. In this sense, 1895 bids fair to be classed as memorable for an upward turn of prices. Two hard, dry, unpromising years lie behind it; and back still farther, we can hear the sound of crashing prices, going down, down, until in some cases, the consumer was getting goods for less than it cost to make them. The American manufacturers and merchants have heard these ominous sounds for so many years, that they can hardly believe their eyes, as they see the scales of prices moving upward and upward. They are beginning to dream of profits once more; and the dealer feels safe in carrying a stock, in the expectation that it may increase in value during the silent watches of the night.

Government Ownership of Railways.

What might be expected in this country if the government should go into the railway business is indicated by the demands of the French railway employees, some of whom are in the government service direct, and more of them in the employ of corporations operating the roads that are owned by the government. Their demands are an eight-hour day, minimum wages of five francs or one dollar a day; two weeks' vacation, with free transportation over all the railways of France; uniform wages and conditions on all lines, and a pension of 1200 francs per year after twenty years' service irrespective of age and health.

Those people who advocate our government buying up the first mortgage on the Union and Central Pacific railroads in order to protect the second mortgage held by the government, and then have the government own and operate these roads, can get a glimpse of the probable result.

Producers on the Pacific coast might get their goods carried below cost at the expense of the rest of the country. Our office-holding army would be largely increased, and the operating expenses of the roads would be much higher.

The American Federation of Labor some time since passed resolutions favoring this, doubtless expecting that the operatives would get more pay for less work than they do now, and while it may be for their interest, it certainly is not to the interest of the rest of the people of the United States.

What Holds a Customer?

The answer may be made in one word—Service. That means a satisfied patron—one pleased with the quality of goods, manner of delivery, the method of rendering accounts, the courtesy of attendants, the style of the store and its service, the personnel of the establishment, the prestige or general reputation of the store.

If all these and other minor details are pleasing, they will retain customers, almost regardless of prices. Customers must have confidence in a store if they are held; confidence is based upon character, and that is of slow growth but easily destroyed. The building of a good name for a store is the work of years. The beginnings of all the great houses which to-day enjoy public confidence were small and the start was made many many years ago. Frequently some new competitors leap into the arena and endeavor to start upon a basis regarded the equivalent of the facilities and capital of the older houses, but almost invariably they fail. Growth is as much a part of the development and maturity of business life as of animal and plant life.

The Hardwareman, or other man, who takes a genuine summer vacation, is better equipped for the labors of the year, than he who pegs away for twelve months without let up or breathing spell.

Western File Works Plant Changes Hands.

The Great Western File Co. has been organized with a capital stock of $400,000 and the plant of the Western File Co., Limited, of Beaver Falls, Pa., has been purchased and work will commence shortly. The transfer of the property was made on July 27th, though the deal was practically closed several weeks previous. The deeds were made over under the name of W. J. Judson, of New Jersey. The plant is said to have been bought for about $200,000, which, considering the fact that it cost in the neighborhood of $750,000 to equip, is a very reasonable figure. The plant will be operated by the Nicholson File Co., of Providence, R. I. The capacity of the plant will be enlarged considerably and will give employment to three or four hundred men at the beginning.

The factory is considered the largest and best equipped of its kind outside of the New England States. The Nicholson File Co., by whom the plant will be operated, have, for twenty-five years, been considered the leading file makers of the world, and at the present time they are operating several large factories, including two plants at Providence, R. I., which have a daily output of about 4000 dozen, and the American File Co., of Pawtucket, R. I., with an output of 1500 dozen per day. All of these factories have been running overtime to fill orders. It is estimated that the productions of these factories represent 50 per cent. of the files and rasps manufactured in this country during the past year.

Michigan Hardware Constitution.

The following is the full text of the constitution of the recently organized Michigan Hardware Association:

The Michigan Hardware Association is intended to include in its membership all responsible Hardware dealers throughout the State of Michigan.

The trade have long recognized the necessity of an organization and the need of closer social and business relations, realizing that much unjust competition arises from misunderstandings and imaginations therefrom; also having for its object the protection of honest dealers and guarding them against fraud. These are the principles of this Association.

It is not intended to encourage any schemes of individuals or firms, but to consider and act upon all matters pertaining to the general welfare of the trade.

You are respectfully invited to examine the Constitution and By-Laws on the succeeding pages of this pamphlet.

CONSTITUTION.

ARTICLE I.

This Association shall be called the Michigan Hardware Association.

ARTICLE II.

The objects of this Association are social intercourse and the discussion of all matters of interest relative to the Hardware trade.

BY-LAWS.

ARTICLE I.

Any person, firm or corporation in Michigan engaged in the business of selling Hardware and known and recognized as a regular Hardware dealer may become a member of this Association.

ARTICLE II.—FEES AND DUES.

Section 1. The fee for admission to membership shall be $3, which amount shall include membership dues until January 1, 1896.

Section 2. Any applicant for membership recommended by a member of the Association will be eligible to membership by a majority vote of the Executive Committee.

Section 3. No firm or corporation shall be entitled to more than one vote.

Section 4. The dues of each member shall be $3 per year, payable in advance in January.

Section 5. Persons admitted to membership in each year shall pay in advance as dues 25 cents per month for unexpired part of year, including the month of application.

ARTICLE III.—APPLICATIONS FOR MEMBERSHIP.

Section 1. All applications for membership shall be on the blank provided by this Association, and shall be accompanied by the membership fee and dues.

FEES AND DUES.

Section 2. All fees and dues must be paid before a person can be recognized as a member or become entitled to act in this Association.

ARTICLE IV.—OFFICERS.

Section 1. The officers of the Association shall be three in number, to consist of President, Vice-President and a Secretary and Treasurer, who shall be elected by ballot at the annual meeting and who shall hold office one year or until their successors are elected and shall have qualified.

EXECUTIVE COMMITTEE.

Section 2. The Executive Committee shall be seven in number, to consist of the President, Vice-President, Secretary and Treasurer and four members to be elected at each annual meeting, to hold office for two years.

ARTICLE V.—DUTIES OF PRESIDENT.

The President shall preside at all meetings and act as chairman of the Executive Committee; in his absence the Vice-President shall perform the duties of President. The President shall provide all committees unless otherwise ordered or provided for in the By-Laws.

ARTICLE VI.—DUTIES OF SECRETARY AND TREASURER.

The Secretary and Treasurer shall keep a record of all meetings of the Association and its committees, conduct all correspondence, notify all committees of their appointment, keep a list of members in a book for that purpose and perform such other duties as pertain to his office or may be prescribed by the By-Laws, have charge of all moneys of the Association, collect all fees and annual dues, pay all bills when approved by the President, and report the condition of the treasury at each annual meeting and when required by the President.

ARTICLE VII.—DUTIES OF EXECUTIVE COMMITTEE.

The Executive Committee shall provide rooms for the meetings of the Association, and shall have power to fill all vacancies in the Executive Committee, and shall transact all ordinary business of the Association not requiring a special vote.

ARTICLE VIII.—INVESTIGATING COMMITTEE.

An Investigating Committee of three members shall be elected annually at the annual meeting of the Association. It shall be the duty of this committee to receive and investigate all complaints, provided such complaints are made in writing and signed by the party or parties aggrieved, and that said complaints be accompanied by affidavits or other evidence to form a proper basis of complaints or source of investigation. They shall endeavor to adjust amicably all such grievance or complaints and if unsuccessful shall bring the matter before the Executive Committee for action. All traveling or other legitimate expenses of this committee shall be paid from the funds of the Association.

ARTICLE IX.—ENTERTAINMENT COMMITTEE.

The President shall appoint at each meeting a committee of three members, whose duty it shall be to furnish speakers or other entertainment for the next meeting.

ARTICLE X.—REGULAR MEETINGS AND QUORUMS.

The regular annual meetings of the Association shall be held on the second Wednesday in July. Fifteen members shall constitute a quorum for the transaction of business, and four will constitute a quorum of the Executive Committee.

ARTICLE XI.—SPECIAL MEETINGS

A special meeting may be called by the written request of the President or of any five members represented in the Association, the President to instruct the Secretary to issue notice of such meeting at least ten days before said meeting; the time and place to be decided by the Executive Committee.

ARTICLE XII.—REVISIONS OR AMENDMENTS

These By-Laws may be amended or revised by a two-thirds vote of those present and voting at the annual meeting of the Association. Any proposed change in the Constitution or By-Laws shall require notice to the Secretary at least thirty days prior to the annual meeting, and the Secretary shall give twenty days notice of proposed change to each member of the Association.

The design for the New York building at the Cotton States and International Exposition has been accepted, and work been commenced. It is thought that it will be one of the finest state buildings on the grounds.

THE YALE & TOWNE MFG. CO.

In the recent anniversary issue the *Hartford Courant* devotes two pages to giving a full and entertaining history of the great Yale locks, from the founding of the industry to the development of our modern artistic Hardware, and from which we take pleasure in making the subjoined extracts:

THE YALE LOCK AND KEY.

Prior to the invention of Mr. Yale, it was the thickness of the door and the size of the lock that defined the size of the round key, then in universal use. Locks were largely fastened to the inner surface of the door, and if the door was two inches thick, for instance, the shank of the key must be equally long and added to this, it must be enough longer to reach into the lock and be able to engage with the bolt. In addition, there must be the bow, for the leverage of the hand in turning, and the extension of the shank beyond the bolt in order that the key might have a bearing on its furthest end in which to turn, much like a shaft. No matter how large the lock, the key must still keep its proportion, until some of the keys were a burden to carry, while the security was not great, being dependent usually upon a few tumblers always accessible to a picking instrument in skilled hands. This combination of round key and old style rim lock was formidable in looks, but beyond; in the matters of actual safety and security, it cut but a poor figure.

Linus Yale, Jr., who had been in business with his father, Linus Yale, Sr., at Newport, Herkimer County, N. Y., manufacturing bank locks, in which field he possessed extraordinary ability and won a leading place, conceived the idea that the key mechanism of a door lock could be separated from the bolt mechanism, thus enabling him to use a uniform size of key, regardless of the thickness of the door. He was the first to separate the key mechanism of a lock from the case containing the bolting mechanism, and to enclose the former in a separate "cylinder" or key escutcheon. This fundamental invention has since passed into universal acceptance for all fine locks, and has revolutionized the lock industry of the United States. Having accomplished this, Mr. Yale further improved his lock by adapting it to receive a key of thin flat metal. He did this by providing a small cylindrical plug, containing a slot to receive the key and forming the axis or bearing in which the key revolved to operate the bolt. These two inventions were equally fundamental—the first in its effect upon lock construction, and the second, in its substitution of a flat key for the cylindrical keys previously in universal use. The key-plug of the Yale lock contains a series, usually five or more, of pin tumblers, each contained in a hole or recess, and each having above it a secondary pin or "driver," which prevents the rotation of the plug by intersecting the joint between it and the surrounding tumbler case or escutcheon. The insertion of the proper key raises the tumblers, so that the joints between them and the drivers coincide exactly with the joint between the key-plug and the surrounding escutcheon. A variation of one-fiftieth of an inch in any tumbler, or in the fitting of the key beneath it, destroys the adjustment and prevents the operation of the lock. This fact accounts for the unrivalled capacity of the Yale lock for permutations or key changes, and enables its makers to produce 50,000 or more locks without duplicating a single key, whereas the key changes of common locks are usually limited to less than 100 permutations, and more frequently to only twenty-four, or even twelve changes.

Mr. Yale had adapted his inventions to only eight different types of locks, and (in curious contrast to the high mechanical quality of his work relating to bank locks), had made these adaptations in crude and somewhat unmechanical forms, when he met Henry R. Towne, then of Philadelphia, who, perceiving the possibility of creating a large industry out of Mr. Yale's inventions, proposed that they should unite their interests. As a result, the two formed a partnership in October, 1868, under the name of "The Yale Lock Mfg. Co.," and bought land in Stamford, Conn., for the erection of a plant. Mr. Yale continued his business in Shelburne Falls while Mr. Towne undertook the designing and erection of new buildings in Stamford. In 1868, Mr. Yale died suddenly, in New York City, of heart disease, before the new plant at Stamford had been erected. Undaunted by this catastrophe, Mr. Towne, however, pushed the enterprise forward, assisted for a short time by John B. Yale, a son of the inventor, and in March, 1869, the new buildings were completed, the machinery and business removed from Shelburne Falls to Stamford, and business begun at the new location with about thirty employees. In June of that year Mr. Towne was chosen president, which position he has held continuously since, and in 1870 the entire Yale interest was disposed of and he became ultimately the sole owner.

HENRY R. TOWNE'S FORESIGHT.

Mr. Yale had chiefly devoted his time and attention to perfecting the various bank locks with which his name is identified and was admittedly the leading expert in that line. Mr. Towne was attracted to the business by the commercial possibilities he foresaw in the flat-keyed lock. He was thoroughly educated in mechanical engineering, an expert draughtsman, and acquainted with the theory and practice of mechanical principles. He was well trained and believed in thorough work, not chance-happenings upon new principles. He has been literally the leader of the house, directing personally all the new lines of endeavor and applying the principles of independence and originality which have been the foundation of its success in a thousand different ways. In addition, he has always taken the most advanced means of informing the trade and the public of the product turned out. Mr. Yale had never printed a catalogue of his productions. One of the earliest acts of Mr. Towne was the publication of a catalogue setting forth the features of the business.

FOUNDER OF THE INDUSTRY.

Henry Robinson Towne, the founder and promoter of the great industries of the Yale & Towne Mfg. Co., was born in Philadelphia, August 28, 1844. He was educated at private schools and in the University of Pennsylvania. He entered the Port Richmond Iron Works in 1862 as a mechanical draughtsman, leaving college for that purpose. He was engaged for four years in general engineering work, especially heavy marine engines for the monitors and other war vessels, the erection of which he superintended at the Boston, Portsmouth and Philadelphia navy yards. In 1866 he made an extensive tour of the engineering establishments of England, Belgium and France, spending six months in France, where he studied at the Sorbonne. Mr. Towne has been an active member of the American Society of Mechanical Engineers from its formation, a member of its council and its president in 1888 and 1889. He is a member of the Century, University, Hardware and Engineers' clubs in the city of New York, a director of the Institute of Mechanical Engineers of London, and of several other scientific organizations. He has two sons, both of whom are now associated with him in the business.

"Hop's" Corner.

Many of the old Hardwaremen, who were educated commercially in Cortlandt Street, especially the old employees of Sears, Adriance & Platt, will remember "Bill" Chapman who was with them a long time and was an "old timer" even in 1860, when he was clerk at the Western Hotel in Cortlandt Street, near Broadway, when Winchester had it. He afterwards went to the war and is alive to-day, a veteran in every sense of the word, the most important man on the Anchor Line Steamship pier above Canal Street. "Bill" was clerk for John C. Tucker & Co., when I linked my fortunes with the house in 1856, and was noted for his fidelity to business and to a system and method in all his work that were characteristic of the man.

In those days, when imported goods formed largely the bulk of a stock of Hardware, especially shelf Hardware, nearly everything was imported in paper packages; good tough paper, and excellent string. Pocket knives, table cutlery, padlocks, saws, almost all the articles that are now put up so much more conveniently in good paper boxes, and it was considered quite a knack, to tie the string properly, and fold up the packages in the original folds of the paper, especially those on the fronts of which the samples were invariably placed so they could go on the shelves in a ship-shape manner. I might say, in parenthesis, what would seem very strange to day, every gross of screws, English or American,—and many of the former were at that time among our imports,—had a sample hanging to the front of the paper package containing it when received from the makers, a custom only abolished when the present system of boxing was inaugurated.

"Bill" Chapman was a head clerk and had charge during inventory time of sampling anew all the pocket and table cutlery, and before I had been a week in the business, I thought I knew as much about the tying up of packages, having heard so much about the art, as any of the older hands, and to prove it to my own satisfaction, I waited one day until "Bill" went to dinner and then tied up one of his half gross packages of sham handle knives and forks, of which we had quite a stock; and can see the number before me now as though it was only a month ago; it was "No. 101," having an old fashioned two tined fork. I felt confident it would be done so well he would think he had done it himself, and then I would break the news to him gently and paralyze him. Well, my thoughts an hour later were on something much more foreign than the cutlery, when I heard an outburst from "Bill," who could swear like the proverbial trooper, "who in h—— has been monkeying with these knives and forks." Of course I was compelled to make an honest confession of complicity. "You?" he said in tones of the sternest derision, "why good heavens, you haven't been here four days yet; suppose you wait until you get your first month's pay before you study the fine arts of the business."

"Well," said I proudly feeling he was jealous of my ability, "what's the matter with the package?"

"What's the matter with it?" says "Bill," "what isn't the matter with it, would be easier. Come here youngster and I'll take the trouble to give you a pointer or two. Do you see how you've got that sample fork? It's on the wrong side of the knife. Do you see those other bundles, they all have the string tied twice around the middle, so as to form a brace for the samples. Do you notice where you put the seam of the paper? Very close to the front, and without the edge turned under, so as to prevent its becoming torn in shoving it in and out of the shelf; and where did you put the ends of your string after tying your knot? About an inch and a half from the front on the opposite side of the package. Now you look at anyone of those other packages and you will see the seam is made one inch from the back, and the knot tied close to it, so the loose ends of the bow knot can be tucked beneath the seam, which the folded edge of the paper permits without tearing."

To say I was humiliated and crestfallen at my presumption, is to characterize it very mildly. I asked "Bill" "if there were any more things apparently so easy, that requires so much study to accomplish," or words to that effect.

"Yes," says "Bill," sententiously. "Lots! you just take that pail of wet sawdust and dust out those bins, and wait until they come to you."

A New Agency for Tower & Lyon.

Tower & Lyon, No. 95 Chambers Street, New York, have recently become the general selling agents for the Holt Mfg. Co., Hartford, Conn. This company manufacture a full line of braces and tool holders, bit brace extensions, household sets, auger bits, steel rules, cutting-off tools, hack saw frames, hack saw blades, nail sets, marking awls, etc. The braces and tool holders are known as the Smith system and the manufacturers say that "they are very simple in construction, and the holding power is equal to the resistance of the bit or tool used, keeping it firmly and perfectly in line. Changes from one bit to another can be made quicker than with any other, as no mistake can be made and no adjusting is required. The braces are of light weight, making them agreeable to use, especially with small tools. They cannot get out of order." Messrs. Tower & Lyon contemplated this move earlier in the season, but at that time the Smith System was only adapted to special made tools and was considered impractical. Since then, however, the company has been placed under new management and the Smith System has been improved to accommodate the ordinary run of bits. This change decided Messrs. Tower & Lyon to become the general selling agents.

Latest Thing in Bicycles.

An inventor who has recently perfected a device for mending punctures in bicycle tires, is also confident that the day is not far distant when the chainless bicycle will take the place of the present bicycle. He has been experimenting in this direction for several years and has perfected a bicycle which dispenses with the sprocket wheels, chain, 40 per cent. of the frame, and the ordinary pedals and pedal cranks. By its peculiar construction, say if 100 pounds is placed upon the saddle, it will take 40 pounds to raise the front wheel; hence it is perfectly safe. The driving levers have a rise and fall of 14 inches; hence the rider's foot travels 28 inches, while by the present chain bicycle the rider's foot travels about 42 inches. The driving levers being nearly double the length of the present pedal cranks now used on the chain bicycle, it is claimed an increase of power is obtained—hence an increase of speed. The inventor will construct the frame of his chainless bicycle of bamboo, as he has recently discovered a process to prevent bamboo from splitting, which has been a great drawback in the use of the material for bicycle frames.

A very interesting part of the exhibit to be made by the Department of Household Economies of the Woman's Board, at the Cotton States and International Exposition, will be cooking by electricity. Electric stoves will be shown in operation, and the process fully explained. Aladdin's Oven, an invention of Edward Atkinson, the famous statistician, will also be shown. By means of this oven, the heat from an ordinary oil lamp will cook a dinner.

HARDWARE costs only One Dollar a year.

CONFESSIONS OF AN UNSUCCESSFUL CLERK.—V.

I wish that every young man who enters upon a mercantile career, might have such mentor and friend, as Almon Nichols was to me. Many of his thoughtful suggestions, and much of his wise advice, fell upon heedless ears, else I had been a better and more successful merchant than I have been. But some of the good seed found receptive soil; and in more ways than one, his counsel and help made the pathway of life easier before me.

He knew everything about the store that it was his business to know. He could buy or sell goods; win customers and hold them; look after the cash and books; figure discounts; and locate every piece of goods, and name the price, with his eyes shut. He took me in hand from the beginning, and was indeed "an elder" brother, in the sweet, old-fashioned meaning of the term.

I think that it was upon the third day of my service with Samson & Crown, when I felt that the time had come to show the clerks along the street how profuse I could be in the way of clothes, if so minded. At the noon hour I hauled my little trunk from under the counter, and donned the pair of light blue army trousers to which reference has been made before.

Even yet can I remember the luster with which they shone as I marched up the street to dinner and home again. The clerks who lolled about the store doors or were upon the street, seemed quite happy over something which I did not quite understand. When Almon saw the outfit, he enlightened me in a quiet, delicate way.

"Those are mighty good trousers of yours," he said, "and will be just the thing to pack eggs or butter in, but they are a little too colorsome, as it were, for street or store wear. Don't you think so?"

"Perhaps so," I answered. "But I have only the one pair besides these, and if I wear them every day, what shall I do for Sunday?"

"I'll fix that," he said. "Let's see just what we have in the way of clothes to go and come upon."

I showed him the yawning emptiness of my trunk. He then entered into consultation with Mr. Crown, and came back and said: "What you need is a good suit of clothes throughout. The boss says to have one made for you, and take it out of your wages for the first six months."

No young man in Grange was more proud of his clothes than I was with that twenty-dollar suit of gray, when it emerged from the hands of the tailor. It kept me short of spending money for the half-year following, but as I never received a letter from my mother that did not contain fifty cents in government "script," I managed to come out even at the end of that time.

I mention this incident simply to show one way of the many in which Almon served me. It was he who took me to church on the first Sunday, and introduced me to a Bible class; it was he who hinted that well-cleaned boots and well-combed hair were the essentials of polite society in Grange; who kept me away from the influence of clerks whose association would have been harmful; who aided me to a better class of reading than I had been accustomed to.

The qualities that made Almon a successful clerk, have been of great aid to him in a mercantile career that has been crowned with an abundant success. He is to-day the senior partner and moving genius in a great mercantile house in the West. Some day I hope he may be persuaded to write for these columns a series of "confessions" of his own, and then I am sure that the young clerks who read him, will have something that they can follow with benefit to themselves and to the gain of their employers.

And yet, with all his success, he does not seem content. I had a letter from him a few days ago, which I here quote as a curious side-light upon human nature. Where can we find a suecessful man, who does not feel that he could have done better, or been happier in some other walk of life? To my mind, life has dealt joyously with him, and yet from the summit of material success, he can see only disappointment and misdirected effort.

"It is true," he writes, "that I have done well in a business way, but life upon the whole has not been as I would have ordered it. I have spent the years that have gone since we were boys together back in Grange, in labor that now seems to have been little more than drudgery of a mental kind—markets to be watched; goods bought and sold; accounts collects; money invested so that by its own power it shall make more money for me to invest. Do you remember the dreams we had in the olden days? You were to be a lawyer, holding juries spell-bound by your eloquence; and I, with my pen, was to thrill audiences of larger proportions. The whip of necessity and of duty drove me into business; the fatal forces of existing conditions have kept me there. The best portion of my nature—that part I should have cultivated—has lain dormant. I had hoped to become a poet; I became, and ever shall be, a money-grubber. It is too late for an attempt at anything else. The power is gone; and there lies in its place only the sadness of regret. There may be a consolation. I have a son who shows something of the power of which I once felt certain. It may be that he shall be permitted to accomplish that which proved to be beyond me."

A re-reading of this plaint has left me but little inclined to take up the thread ot a narrative which, I am afraid, I undertook without due consideration of the responsibilities which it involves. Thrice this morning have I laid down my pencil, and left my desk, to wait upon customers who were in search of haying tools and calico; and the sharp-eyed young German who is my employer, is doubtless wondering why his plodding old clerk is engaged upon a task that apparently has no connection with the store. He does not, perhaps, comprehend that even an ancient clerk has a regretful memory, that at times goes back to the Sabbath afternoons in Austin's woods, when two boys sat together in the shade, and wove mystic dreams of success and fame and wealth and love, and traveled down those splendid lanes of coming adventure, in which the mind of a boy must at times travel; when each to himself is a Lancelot upon his charger, a Paul Revere waking the echoes of the centuries, a Galahad in quest of the Holy Grail, a Paul thundering new truths into the ears of a startled world.

"A boy's will is the wind's will,
And the thoughts of youth are long, long thoughts."

I remained for two years in the employ of Samson & Crown, and in that time had opportunity to learn much that might have been of great assistance in after life.

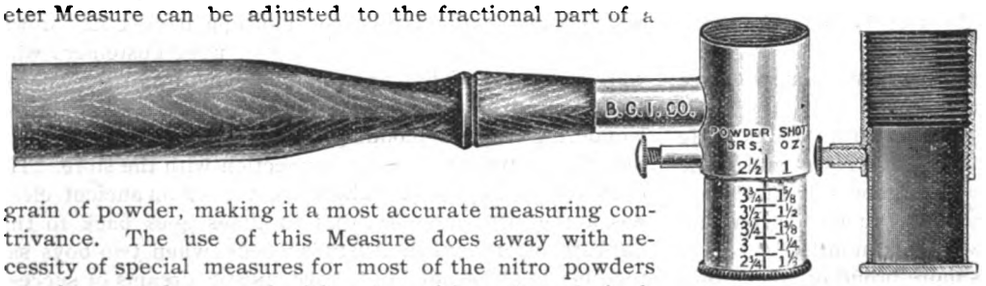
The boy of seventeen has reached a dangerous age. Not merely because he has left the sheltering innocence of childhood, and must meet the temptations that every youth must sometimes face. The trouble is that he too often knows so much, that his elders can teach him little. He feels prepared to settle all the questions of ethics or statesmanship, off hand. I recall the anecdote of that young law student, to whom the judge before whom he was being examined for admission to the bar, stated a legal case, and asked him how it should be decided,

Without a moment's hesitation the young man disposed of it, then and there. "There can be only one decision to

Digitized by Google

it," he added pompously. "No man who is posted in common law could hesitate for a moment."

"Perhaps not," said the old judge thoughtfully. "Only it caused a disagreement among the judges of the United States Supreme Court when it came up before them. I am glad, however, to find that it is so easily disposed of."

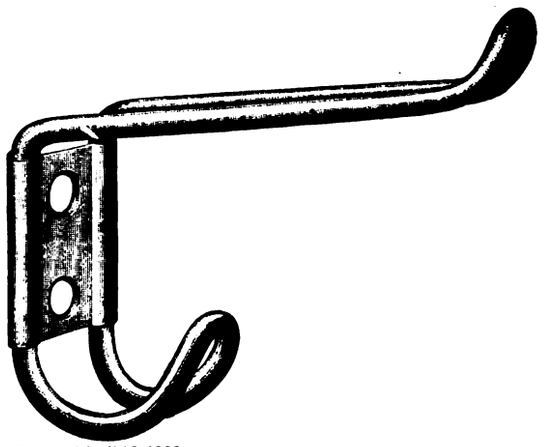


At seventeen, the young man has courage beyond knowledge, and in his enthusiasm, is ready to undertake adventures from which he would shrink in his later years. He is usually a loveable creature, withal, and even in these days of gray hairs, I can never meet him in his joyous enthusiasm and cheerful view of things, without an impulse to slap him on the back and give him Godspeed in his happy jaunt toward the unknown future.

I am not of those who would deny to youth the natural pleasures that belong to his time of life. But when he forgets the duties that have been entrusted to him, or belittles their demands upou him, because he is set upon having "a good time," he stands in great danger of his future, and needs the aid of a firm and guiding hand.

In my case, it was unfortunate that I had not entered into business with the intention of making it my life work. Like too many of the young men of America, I had taken the first opening that had offered itself, by which I could tide over the days between boyhood and manhood, and perhaps lay up a few dollars with which to aid me in the study of law. There was, therefore, no incentive to master all the details, to build up gradually, to work on to larger things. I had, also, the unfortunate belief, that superficial smartness compensated for more substantial things.

Micrometer Powder and Shot Measure.



The Bridgeport Gun Implement Co., Bridgeport, Conn., and Nos. 313 and 315 Broadway, New York, have introduced the Micrometer Combined Powder and Shot Measure illustrated herewith. The introduction of this device marks another step in their progress toward perfection and absolute accuracy in the loading of ammunition. The Micrometer Measure can be adjusted to the fractional part of a

grain of powder, making it a most accurate measuring contrivance. The use of this Measure does away with necessity of special measures for most of the nitro powders now in general use, and although positive when desired, the user does not need to confine himself to the special graduation stamped on the measure, but can vary the standard charges, increasing or diminishing the same either way to a few grains, or even the fractional part of a grain, so that one can load with the charge, giving best results in different guns. The Measure as now on the market is graduated for standard drams of black powder, and is also the standard charge bulk for bulk, for EC. SS., "American wood powder," Schultze, and "Dupont's Smokeless Powders." One complete revolution of the cup equals 1-12 of a dram or 2⅓ grains of black powder, or 1 1-16 grains of Schultze powder; so, figuring from the charges above, user can vary charge proportionally on this basis to suit his requirements. The company state that "there are, however, a few special powders, such as Walsrode, American W-A 'Smokeless,' and others so powerful that the charges required are proportionally much smaller than the lowest capacity of our combination Micrometer Powder and Shot Measure. For these a special Micrometer Measure for powder only will eventually be made and put on the market to meet the requirements of sportsmen. The Micrometer Measure for the 'American W-A Smokeless Powders' will in August be ready for the market."

The Atlas Coat and Hat Hook.

The Atlas Mfg. Co., New Haven, Conn., have issued a revised list of their Hat and Coat Hooks, which we give below, with a discount of 40 per cent. The company state that about three years ago they attempted to cease the manufacture of this popular hook, whereupon there was such a pronounced call for it that it was decided to take it up again and they have been manufacturing it ever since in the several finishes which are indicated on the list. They

Patented April 16, 1889.
FULL SIZE CUT.

dropped the 2½ in. size and 3½ in. size and make simply this 3 in. hook. The manufacturers further say that "the Atlas Closet Hooks are not so convenient to put up as the common wire screw hook; they require two screws for each hook, and cost a very little more. They are, therefore, not recommended for work where the cheaper hook will answer. They are especially adapted to all places where hard usage is to be expected, such as school-houses, halls and public buildings, and we strongly recommend them for the better class of private dwellings. The difference in cost would hardly amount to a dollar on a whole house. They are better than others for the work specified in the following particulars: They are heavier, are not brittle, and are amply strong. Being applied with two screws they are firm and rigid, and cannot work loose. They are roomy, well finished, and present a uniform appearance, never getting bent or out of line." The following is the price list:

PACKED WITHOUT SCREWS			PACKED WITH SCREWS.		
No. 10, Japanned	per gro.	$1.50	No. 100, Japanned	per gro.	$1.90
" 20, Coppered	"	1.50	" 200, Coppered	"	1.90
" 30, Tin Plated	"	2.50	" 300, Tin Plated	"	2.90
" 40, Brass Plated	"	2.50	" 400, Brass Plated	"	3.25
" 60 Nickel Plated	"	5.00	" 600, Nickel Plated	"	6.00

Packed ½ gross in paper box; 10 gross in case.

The company inform us that business for this month has more than doubled what it has been in any July since 1892.

A dispatch from Pittsburg says: The Carnegie Steel Co. at Homestead have tested a new plan for reheating molten metal that has become chilled before it can be poured into the moulds, causing delay and loss. The new plan largely consists in forcing into the mass an electric current, by which an intense heat is generated. The molten steel was set to bubbling, and the light and heat was so intense that the workmen's eyes seriously suffered, but at the next test they will wear glasses. The experiment was largely successful, and the results promise to become indispensable in the manufacture of steel.

The successful merchant follows no criterion but that of integrity and hard work.

"POINTERS ON MAIL ORDERS."

The Simmons Hardware Co., St. Louis, have published a little pamphlet with the above heading, in which they have condensed their years of experience into a few maxims for the guidance of the patrons of their house when ordering by mail. As these instructions have a general value to dealers who give such orders, whether to the Simmons Co. or elsewhere, we have obtained permission from the company to make extracts therefrom, and from the mass of valuable information the following "pointers" have been gleaned:

Retail merchants who are most successful buy frequently, in moderate quantities, keep their stocks thoroughly well assorted, and have what people want when they ask for it. No other one thing contributes so much to the success of a retail Hardware dealer as this.

It is a mistake in these days of quick freights for a merchant to buy an unnecessarily large stock at one time.

If you have a large stock of old style goods, you cannot profitably take up newer and better things promptly as they are put upon the market.

A wholesale house carrying a large and varied assortment of goods that fills orders promptly and satisfactorily is absolutely essential to the success of the retailer. The retailer should look upon the stock carried by his jobber as his own reserve stock, to be drawn from at such times and in such quantities as he may elect.

The larger the assortment and more varied the line of goods we carry, the greater it is to the interest of the retailer, because he can obtain more variety of goods in one order, and make up a larger shipment with moderate quantities of each article, and have same all come from one house.

The local rate on 100 pounds of assorted Hardware is the same as on a carload; hence when you can make up 100-pound shipment or order you obtain a minimum freight rate.

That merchant is the most successful who makes the largest profit on the smallest amount of capital invested. A, who makes $1000 per annum on $5000 capital, is more successful than B, who makes $1500 on $10,000 capital.

Buy novelties in very small lots at first. If they sell, buy more. If they do not sell, you are not very badly hurt.

Look out for the specialty man with ten per cent. off in one-gross lots. He is dangerous! Do not buy an overstock of anything, no matter what the inducement.

Just think of the knowledge, work and expense necessary if you were compelled to buy each item you carry from a different manufacturer!

A mail order being voluntary, expresses preference for and confidence in a house; is the highest compliment, and should command the best attention and lowest prices.

Well regulated jobbing houses will show their appreciation of mail orders in a substantial manner by giving such orders the most prompt and careful attention possible.

We respectfully ask your attention to the following suggestions and recommendations in regard to better "method" in writing mail orders, believing if they are followed your orders will be handled more to your satisfaction:

Write only on one side of a sheet of paper. Well written mail orders are never cop ed, but are filled from the original orders. Where orders are written on both sides of a sheet it necessitates their being recopied. Recopying is one cause of delay.

Write only one item or size on a line. When several sizes or items are entered on one line there is danger of the stock clerk skipping one of the items.

Do not crowd your writing on the sheet. A crowded order is hard to read. Time is more valuable than paper. We will be glad to furnish order blanks on application.

Nothing but the order and instructions in regard to shipping and filling orders should be on the order blanks. When an order takes several sheets, pin them together. When they are sent in loose they are sometimes separated, and time is lost in getting the sheets together again.

Nothing causes more delay in attending to a customer's wants than their writing about several subjects on one sheet. We frequently receive one letter sheet which contains an order for goods, refers to a remittance, asking for a quotation, and possibly several other matters.

Large jobbing houses of necessity are divided into departments. Such a letter must either be copied into sections for each department or the letter itself be passed from department to department, taking its turn in each department, and the customer may be wondering why all his inquiries have not been promptly answered, and blaming the house for being very slow in replying to letters.

If dealers will write in regard to orders, remittances, quotations, etc., on different sheets, these letters will then, immediately on receipt, be sent to their proper departments to be answered the day they are received. Each part of such letter should be complete in itself, as if no other letter had been written at the same time to the house on another subject.

When ordering axes, always state whether you wish single or double bit, and also give the weight and size.

On wash boilers, tea kettles, coffee boilers and copper bottoms always give the number and state whether you wish pit or flat bottom. We often receive orders for "boilers," and are at loss to know whether customer wishes wash or coffee boilers. On wash boilers, state whether tin with copper bottoms, copper strip or all copper are desired.

In the season we carry a large stock of endless belt for threshing machines. If you need one immediately and wire for same you may depend upon your order being filled promptly.

On bit braces, state rachet or plain and give length of sweep.

When customers call for "bolts," we always send common carriage.

Always state whether cast or steel butts are wanted. In some sections nothing but steel butts are used and in others only the cast. The first number or the sizes of butts is the length, the last number is the width; 3x2½ is 3 inches long and 2½ inches wide.

On indefinite orders it is often puzzling to know whether to ship rim or central fire, long or short cartridges.

In ordering castings, especially lawn mower parts, give the year, which on lawn mowers is generally cast in the drive wheel.

The size of screen doors is often omitted. The usual sizes are 2-6x6-6, 2-8x6-8 and 3x7, ⅞ inch and 1⅛ inch thick.

On forks, state whether short (D) or long handle (length of handle), and also if hay or manure forks are wanted. Also state the number of tines. Unless otherwise ordered, we always send strapped forks.

In ordering gun goods always give the catalogue numbers and sizes. Do not forget the gauge and length of barrels on shotguns, or calibre, length of barrel and whether octagon or round on rifles are wanted.

The manner in which T hinges are now manufactured, what is called "Heavy T" is hardly any heavier than the light T. If you wish a very heavy T hinge always order "extra heavy T hinges."

Digitized by Google

When no size or ply is given on rubber hose we send ¾-inch 3-ply, which is the usual size for garden hose.

When ordering pick handles, state whether railroad, drifting or coal, and give either the grade or the price you wish to pay.

State whether you wish locks with or without knobs. When rabbeted locks are ordered, state whether the door is right or left hand. On sliding door locks, whether astragal or flat front.

In the fall we experience much trouble on account of indefinite orders for lamp chimneys. State the grade and kind that you want as well as the number. As chimneys are not packed with assortments of lamps and as the lamps are not priced complete with chimneys in these assortments, if you wish chimneys you should make it a point to order them separately.

We daily receive orders for nails on which the customer does not state whether he wishes cut or wire. In some sections cut are used entirely, while in others nothing but wire.

On poultry netting give width, mesh, size of wire. Where the mesh and wire are not given we send 2-inch mesh, No. 19 wire. When the width is not given we have to write the customer.

Wood pumps are frequently ordered without stating the width, whether plain or porcelain lined, length or diameter. On chain wood pumps state if you wish curbs only, curbs and fixtures, or the curb complete with fixtures, chain, tubing, clamps, etc. In the latter case always give the depth of the well.

We frequently have to write customers asking whether they wish weaver's reeds in four quarters or five quarters.

In ordering horse shoes do not forget to state whether you wish fore and hind assorted, all fore or all hind in a keg. If you wish assorted, give size of shoes.

Shovels are frequently ordered without stating whether long or short (D) handles, square or round points, black or polished.

Post, drain and tile are different spades. Customers often order one kind when they wish the other.

We must caution customers in sending us orders for steel stamps to be made to order, to be sure to get the name or initials exactly right. When such stamps are incorrectly made they are worthless.

In ordering crosscut saws state whether narrow or wide saws are desired, also give the length. Recently manufacturers are selling crosscut saws without handles; therefore state if saws are desired complete with handles. On circular saws, state if rip or crosscut.

In the fall months, on account of indefinite orders on stove pipe, we are at a loss to know what to send. State whether you wish pipe nested fifty joints in a crate or common riveted stove pipe shipped out in bundles.

When ordering stove boards state whether you desire round, square or oblong boards, or common zinc, wood or paper lined.

On tackle blocks it is a common thing for a dealer to simply order the size, without stating whether single, double or triple are desired.

On trowels, be careful to state if brick or plastering are required.

In ordering tacks state whether you wish carpet or cut, blued or tinned, quarter or half weight.

When ordering barbed wire state whether you wish galvanized or plain, hog or cattle, two or four point. We have had to write so many letters asking these questions that we have finally adopted a printed form for this purpose. When ordering annealed fence wire and staples always state the number of wire, size of staples, galvanized or plain.

Wringers are frequently ordered without the customer stating whether he wishes wood or an iron frame.

State whether you wish wood or steel wheels on wheelbarrows.

When ordering extra parts of different articles, please advise us whether (if we do not have them in stock) you wish us to order them sent direct to you from the manufacturers.

When you especially desire a certain article you should make a memorandum in the order to that effect. When such memoranda are made, if we do not carry or happen to be out of the item, we not only try to get it of the other jobbing houses in the city, but go to the retail stores. In such instances you should give us some leeway in the matter of price, as we generally cannot buy such articles at the prices we sell them.

We prefer to have orders only for goods that we carry regularly in stock, as we find it almost impossible to give satisfaction on goods that we do not keep and have to buy out for our customers.

When a customer sends us an order for goods that we do not carry regularly in stock, and which is sufficient for a shipment by itself, unless otherwise instructed we turn such orders over to responsible houses in this city, with the request that they ship and bill the goods direct to the customer, as we do not profess to be headquarters for anything except goods we carry in stock.

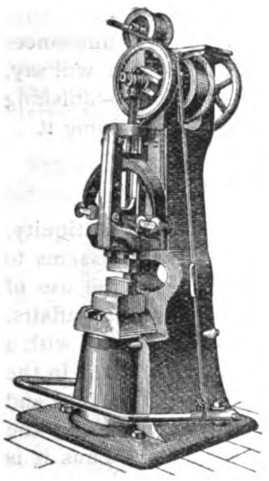
When customers order with other goods items that are made to order, they should state whether they wish the entire bill held until such items are completed. We refer especially to seines, tents, fire guards, special sizes of bolts, etc.

As an accommodation, should we buy out special kinds of wire cloth for customers and have it cut to suit them, we cannot under any circumstances have such cloth returned to us; therefore be particularly careful in writing out such orders.

Be careful in taking orders from your customers for goods to be made to order to have it distinctly understood with them that such orders are not subject to a countermand after being placed, and that if the goods are received exactly according to specifications that they cannot be returned or exchanged. We refer especially to guns and special tools.

Instead of using the catalogue figure numbers, we prefer customers to give a full description of the article and the number and size shown in the catalogue. The figure number often represents a cut, which shows several sizes of the same article.

Dealers off of the railroad will prevent their goods being shipped wrong by being careful to enter on their orders the railroad point to which they wish the goods shipped. Where the name of the town and post-office are different, dealers will avoid having their invoices sent incorrectly by always entering and underscoring the name of the post-office.



A chicago paper tells about a gentleman of that city who a short time ago, wanted fifty gold dollars for some purpose. He applied to his bank for them, and was offered the amount in larger coins, but the dollars they did not have. He looked farther, and soon found that there were no gold dollars to be had in Chicago, not even at the subtreasury. He wrote to New York and Washington, but the dollars could not be found. Finally, he learned that they could be had in San Francisco, but only on the payment of 50 per cent. premium. It is said that there has not been a gold dollar coined in forty years, and that altogether but 1,004,000 have been minted.

It is announced in HARDWARE that two new uses have been found for aluminum, the metal having been employed as a material for caskets and for the treatment of decayed teeth. It helps to fill cavities in both ways. — *Boston Journal.*

A New Power Hammer.

Scranton & Co., New Haven, Conn., the well-known builders of Power Hammers, have recently completed and now have ready for the market a Power Hammer of similar design to their regular hammers as previously made, but much lighter. This hammer is built to fill a demand where a light, quick running hammer is required. It is small in all parts, evenly balanced, and so constructed that it requires but one horse power to run it. The size of the base is 26 inches by 26 inches. Diameter of driving pulley, 10 inches. Size of belt, 3 inches. Average number of blows, 400 per minute. Adapted to work stock from ¼ to 1¼ inches. Height from foundation to centre of shaft, 5 feet 8 inches. Extreme size of dies admitted between the ways, 5x6 inches.

Like their other hammers, this is of the upright pattern, taking the power at the top of the hammer, thereby decreasing the danger and inconvenience of belts running near the floor, where they are in the way and gather grease and dirt. The ram is guided both front and back by two upright ways, which reduces the friction and requires the ram at all times to strike an absolutely accurate blow. The adjustment of the ram is made by one turn of the wrench, and the blow is at all times under the control of the operator to start or stop instantly. The anvil is separate from the frame, which greatly reduces the jar on the hammer. This firm have had over twenty years' practical experience in the use and manufacture of Power Hammers, and are prepared to furnish hammers for all classes of forging, including file and cutlery work, carriage Hardware, plating, drawing and all kinds of general blacksmiths' work. They will be pleased to furnish promptly circulars with full information regarding these hammers to all those interested in this class of work.

Dixon's Graphite Pipe-Joint Compound.

Twelve or fifteen years ago this article was known under the name of "Smear Grease," and later was changed to "Pipe-Joint Grease." It really is not a grease, and as the name has caused some misunderstanding, the Dixon Co. have decided to change it, and it hereafter will be known as "Dixon's Graphite Pipe-Joint Compound." This compound, under one or the other of its several names, has been in the market for about twenty years. It is not only useful for joints, and all steam, gas and water piping, but is equally useful for smearing gaskets and flange joints of meters, traps and for bolts, screws, etc. In the mills, mines and factories of the Dixon Co. this compound has been used in preference to any other article. "It is infinitely superior both in usefulness and economy to red lead, and the Dixon Co. recommend it as such with the fullest degree of certainty. That the company is not prejudiced in its favor is easily shown by the testimonials of its customers, among whom are manufacturers of steam and hot-air radiators and heating appliances, iron companies, machinists, engineers and contractors, railroad companies, gas companies and general manufacturers." The president of the water and lighting department of Harrisburg, Pa., said: "I have long ago forbidden the use of white or red lead or anything but your Graphite Compound in this department. The result is that we have no more breaking of bolts or nuts on our street mains, valves, etc., or any trouble of that kind in or about our pumping plant. I think those plumbers or steamfitters who persist in the use of white or red lead are doing so purely through ignorance, as nothing is so costly, not even carelessness." "The use of red lead depends largely upon tradition. Our forefathers had nothing better and knew of nothing better, but that is no reason why we should continue to use it while there is something so many times better and more economical." This Graphite Pipe-Joint Compound is manufactured by the Joseph Dixon Crucible Co., Jersey City, N. J.

Kerosene and Water Sprayer.

The Deming Co., Salem, Ohio, have devised an attachment for their Perfected Galloway Knapsack Sprayer, illustrated herewith, whereby kerosene and water may be mechanically mixed while pumping, the mixture being made in any desired proportion, varying from 1-30 to ½ of kerosene. The different proportions are obtained by a lever which operates a stop cock at the kerosene inlet. An indicator is placed on the tank so that no mistake can be made in the desired mixture. A check valve in the kerosene supply tube and one in the water suction tube prevent any mixture of the liquids except while pumping. The company state that "kerosene as an insecticide has heretofore been made into an emulsion by the addition of soap suds or sour milk. To make kerosene emulsion requires the greatest care and precision, generally causing trouble and loss of time." The further explain that "explicit directions are furnished for operating the machine to destroy insects on fruit trees, plants, domestic animals, etc. Spraying with this apparatus is absolutely simple. It is a great labor, time and money-saving device, and will be highly appreciated by horticulturists. The nozzle used is either the Deming-Vormorel or the Bordeaux. The latter is adjustable to either fine, coarse or double spray, solid stream, disgorgement and shut-off, features possessed by no other spray nozzle."

A new freak of fashion is reported from Paris which may, like many another Parisian fashion, cross the Atlantic and take lodgment in ultra-fashionable society here. Culinary articles, such as saucepans, pudding and jelly moulds, etc., are reproduced in miniature in silver and silver gilt as ornamental objects and used as room decorations. A certain chef was inspired with the idea of employing these pretty imitations of his *batterie decuisine* for serving up a cherry compote of his own concoction at a large dinner party, and the effect is described as very original. As the dainty counterfeits cost a good deal more than the originals (unless these are of silver also) the fashion is not likely to become very general, but it is worth noting as a queer ebullition of the craving for a fresh sensation.

The United States Scale Co., Terre Haute, Ind., have recently purchased additional ground, with the intention of increasing the size of the factory and adding small scales to the line of manufacture. The company has had a steady increase in business the few years it has been in operation, and recently the orders for scales have been so numerous that the employees have been rushed. Heretofore the scales built have been of the large size, for elevators, railroads and mines.

An exchange tells a story of a man in London who determined to spend all he made during the first year in advertising. He soon found that it was impossible, for the simple reason that the more he advertised the more he made, and after a strenuous effort to get rid of his money in advertising he had to give it up.

Advice from Across Sea.

A good, well assorted stock, nicely arranged and kept in good order is indispensable to success, writes an English ironmonger in *Ironmongery*. So arrange the stock as to have, as far as possible, everything at hand. "A place for everything and everything in its place" is a motto we ironmongers cannot dispense with. Some shops are pictures of order and neatness, others the reverse. During the hot weather I sprinkle the floor of my shop frequently. This is very refreshing to customers coming in out of the broiling sun. I often hear them remark, "How nice and cool your shop is!" The same remark will often be made with regard to neatness and order. Ladies, especially, will notice these things. They don't like to bring their new dresses into a dirty, untidy shop. They always give the preference to the cool, clean shop.

Always keep say half a dozen leading lines at hand on the counter, and introduce them to each customer. At the end of the week put them all away and replace them with a fresh lot, and so on from week to week. Some will, no doubt, dub you a "Cheap Jack" if you adopt this system, but never mind that. The introduction of something new will often not only affect the sale of it, but be an introduction to something else. Kuowing that you keep the run of novelties people will frequently ask if you keep so and so. The result will often be a good order, whereas had you no novelty to introduce your customer would have left the shop and placed his order elsewhere. A full and well assorted stock will often induce customers to buy what they did not come in for. Let it be known that you are the man who can and will do the thing right, and that they can depend upon getting what they want at your shop.

Keep a kind of revolving show at your door. By this I mean have a complete change outside your door every Monday morning. In this way you will in turn show most if not all your stock that will admit of exposure. Some ironmongers seem to have a way of sticking at their door the same goods week after week, regardless of seasons. These goods become that dirty that they are not only unfit to be seen, but in many cases unsaleable. Far better show nothing at all, as people get the impression that both yourself and goods, as well in the shop as at the door, are a dirty lot. Change your show in front once a week.

Punctuality is important—open your shop to the minute. Country people rise early and often want goods, such as haymaking tools, builders' ironmongery, etc., and such people are generally in a hurry and don't like being kept waiting outside the shop; let such know that your shop is always open to time. The prompt delivery of goods sold should not be overlooked. When people buy anything they generally like to have it at once, whether they want it for immediate use or not. Strict *personal* attention to business is absolutely necessary. Don't leave your business to others. Customers like to see the principal. Let him, therefore, be at his post. He can do what no one else can, can quote prices, right wrongs, secure orders, and, in a word, no one can quite fill his place.

Don't encourage loafers about the shop. In every town are to be found retired tradesmen, etc., who have nothing to occupy their time and are too fond of "popping in," as they say, "just to have a chat," which means when once they get a footing an endless yarn about matters you either know all about or don't wish to know. The busy ironmonger cannot afford to waste his time in this way, and the sooner he gives his friend (or shall I say enemy?) the "straight tip" the better. This can generally be done without giving offense, but, be that as it may, let it be done, but by all means in the most agreeable manner. I used to be daily pestered with one or two of these time-wasters, and when they "popped in" at the front I used to make it my business to "pop out" at the back, consequently they had only the chairs to talk to and soon gave it up.

If you are of a witty and jocular turn of mind it is safe to crack jokes with some customers freely, but it must be done wisely. If you watch your customers you will almost infallibly know where and when to let the joke come in. There are comparatively few people who do not enjoy fun, and a joke can often be used to turn away a client's anger and create an outburst of laughter, and so "calm the troubled breast."

At all times and under the most trying circumstances keep yourself under perfect control. This, you will say, is more easily said than done; granted, but it is astonishing what can be done if only the mind is bent upon doing it.

Ancient Weighing Machines.

The origin of the balance is lost in the haze of antiquity, for in some form or other, however primitive, it seems to have been known to most nations. Indeed, the use of a balance is such a primary essential in commercial affairs, that it is difficult to believe that any nation or race, with a pretense to civilization, could long exist without it. In the early times, merchants were obliged to carry a balance and set of weights about with them chiefly for weighing the bars of metal which they exchanged for goods. Thus it is clear that a standard of weights must have been agreed upon. Deceit, however, was also known and practiced, for dishonest traders carried two sets of weights: one to buy with and the other to sell with. It would appear, therefore, that a perfect Weights and Measures Act and a sound system of inspection were as much needed then as now. A thousand years B.C., King Solomon said, "A false balance is an abomination," and five hundred years before that, a Scriptural request was written, viz., "Let me be weighed in an even balance." The Jews were most probably taught the use of the balance by the Phœnicians and Assyrians. The Chinese date the origin of their balance—or steelyard—back to a prehistoric period, and as with many other things, they attempt to make the prehistoric invention serve the nineteenth century.

The cumbersome method of conveying scales, weights and bars of metal, however, was largely dispensed with by the invention of coins, whereby recognized pieces of metal became legal tender for merchandise, but even at the present day a few of our itinerant tradesmen still carry about their scales and weights—being legally compelled to do so—though not for weighing money, but goods. It is certain, then, that the manufacture of balances has always been an industry of considerable importance. To-day, the production of some balances or scales is a fine art, since they are so delicately constructed as to turn with a weight invisible to the unaided eye, the intrusion of a speck of dust at the time the scale is used being regarded as a matter of concern.

A new apparatus for the extraction of teeth by electricity consists in an induction coil of extremely fine wire, having an interrupter that can vibrate at the rate of 450 times a second. The patient sits in the traditional armchair and takes the negative electrode in his left hand and the positive in his right. At this moment the operator turns on a current whose intensity is gradually increased till it has attained the utmost limit that the patient can support. The extractor is then put in circuit and fastened on the tooth, which under the action of the vibrations is loosened at once. The operation is performed very quickly, and the patient feels no other sensation than the pricking produced in the hands and forearms by the passage of the current.

The greatest bridge in the world was planned by a Chinese engineer and built by Chinese workmen. It is of stone, and reaches across an arm of the China sea by 300 arches. Over the pillar of each arch reclines a lion carved from a block of marble 21 feet long. The roadway is 70 feet wide.

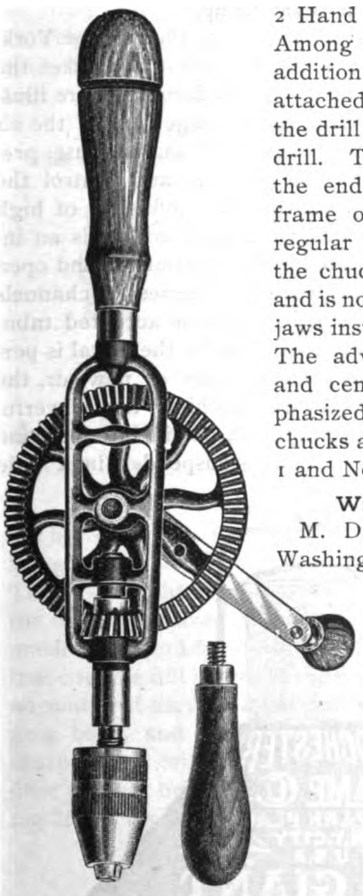
NEW GOODS IN THE MARKET.

If you have anything NEW, let the world know it by illustrating it in these columns.



NO CHARGE WHATEVER is made, direct or indirect, as our interest lies in showing the readers of "HARDWARE" where the LIVE manufacturers and wholesalers are, and what they are doing.

When your NOVELTY or SPECIALTY is ready, send us an Electrotype and descriptive matter, which will appear immediately.

The Hardwaremen everywhere read this department; it is to your interest to make prompt use of it.

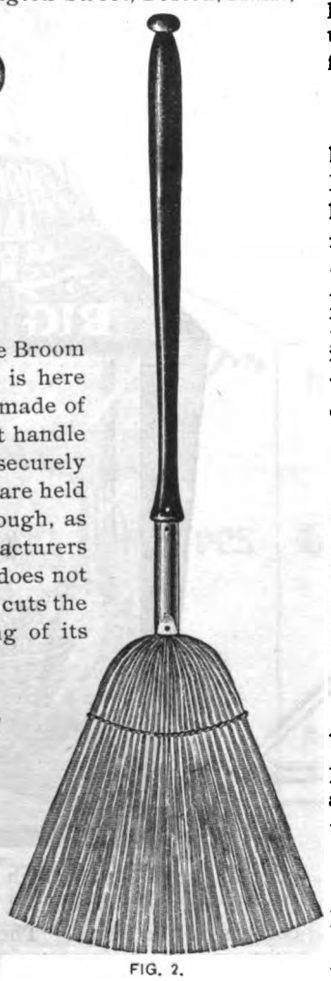
Millers Falls Hand Drill No. 2.

Millers Falls Co., No. 93 Reade Street, New York and Millers Falls, Mass., have made improvements on their No. 2 Hand Drill as here illustrated. Among the improvements is the addition of an extra handle, to be attached when it is desired to use the drill in the manner of a breast drill. The handle is threaded on the end and is screwed into the frame on the side opposite the regular handle. The pattern of the chuck has also been changed and is now arranged to carry three jaws instead of two as heretofore. The advantage gained in holding and centering the points is emphasized by the company. Similar chucks are now used on their No. 1 and No. 5 hand drills.

Wire Broom Fly Killer.

M. D. Jones & Co., No. 368 Washington Street, Boston, Mass., are offering to the trade the Wire Broom Fly Killer, illustration of which is here given. The article is a broom made of very light wire attached to short handle by means of a metal ferrule securely pinned to the stick. The bristles are held in shape by a cord braided through, as shown in Fig. 2. The manufacturers claim that the broom kills but does not crush the fly or other insect. It cuts the air and gives the fly no warning of its approach, as is the case with a newspaper. For Hardware dealers the killers are put up one dozen in a box, and a display stand, as shown in Fig. 1, is sent free with the first order.

FIG. 1.



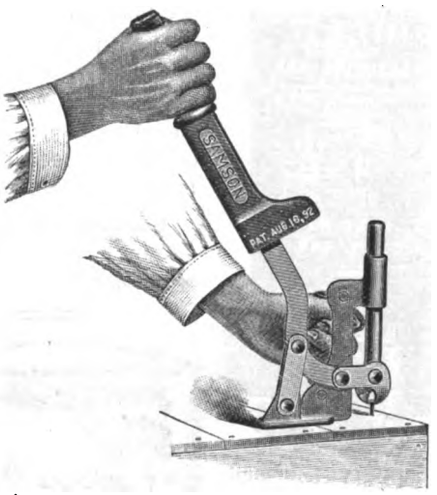


FIG. 2.

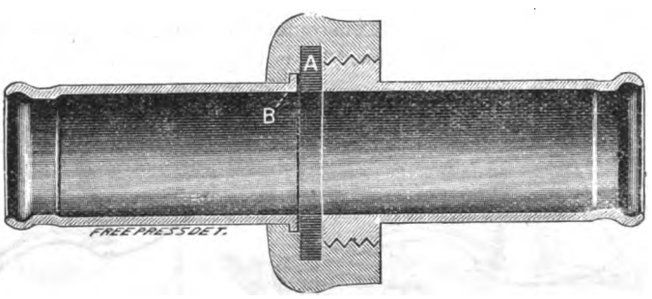


Samson Improved Nail Puller.

The Samson Mfg. Co., Hartford, Conn., are introducing an improved form of the "Samson" Nail Puller, as herewith shown. The jaws of the Puller are made of a good quality of steel to prevent them from breaking, the standard and the rammer is of malleable iron, the lever is supported by two steel links to prevent side motion and to make the tool rigid, and all parts are interchangeable. The manufacturers claim that the tool pulls nails perfectly straight; that it pulls nails that cannot be drawn with other pullers; that the hands are not bruised or fatigued when using the tool; that it is strong, durable, well made, nicely finished, and that it is reasonable in price.

Never-Leak Hose Coupling.

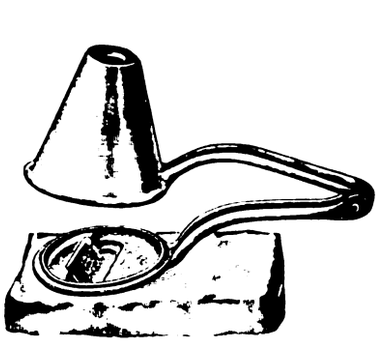
The accompanying illustratration represents a hose coupling offered by the Clayton & Lambert Mfg. Co., Ypsilanti, Mich. The waterway is fully ¾-inch in size and the coupling is of the double recess pattern. One recess holds the rubber washer in place, to prevent its dropping out and becoming lost. The other recess lets the flange of the tail piece on the female end of the coupling drop below the level of the base of the recess in which the washer fits. It is explained that the advantages of this construction are that when the swivel is screwed up on the male end or sill cock the male end comes to a seat on the washer and on the base of the washer recess, and not on the flange of the tail piece, thus forming an easy working swivel. The couplers are fitted with rubber washers and are warranted by the makers to be free from sand holes.

The Eureka Self-Measuring Oil Tank.

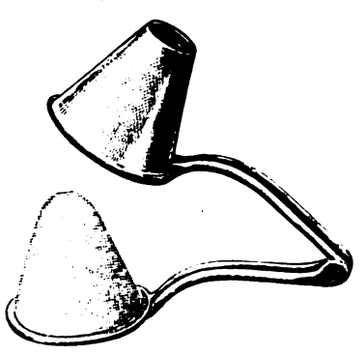
J. R. West, Gas City, Ind., has brought out a new Self-Measuring Oil Tank, illustration of which is here shown. "The oil is pumped into a reservoir above the tank, which holds five gallons. A gauge in the reservoir, worked by a float, indicates the exact amount of oil inside, from one pint to five gallons. The oil is then transferred to the can

Digitized by Google

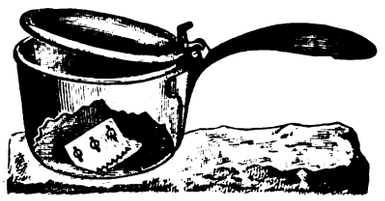
or vessel waiting for it by means of a faucet. By the use of our tank, five gallons of oil can be drawn and placed in a can in less than a minute and a half without soiling the hands or slopping the oil. There are no strokes of the pump to count, but the exact amount is registered on the indicator, whereby it can be plainly seen at all times just what amount is being drawn. The tank is made of the best galvanized iron, and each is thoroughly tested before leaving the factory. The pump of the floor tank is detachable so it may be used to pump the oil from the barrel to the tank." Floor tanks are made to hold 60, 110 and 165 gallons.



Sanitary Garbage Can.



Sidney Shepard & Co., Buffalo, N. Y., are introducing the Sanitary Garbage Can herewith shown. The Can disinfects automatically from the cover, the disinfectant being poured into the cover from the bottom, and when the cover is placed on the Can the disinfectant commences to drip. It is stated that any disinfectant may be used; that it does not spill when the cover is removed; that one filling lasts a long time, and that the disinfectant may be used at a cost of five cents a month or less. The Can is designed to keep garbage sweet and to prevent fever germs, foul odors, sour cans, poisoned air and the spreading of disease by flies. The makers claim that the device sells at a small advance over the ordinary can.



The Enterprise Ice Shredder.

The Enterprise Ice Shredder, illustrated herewith, is an article which has met with a very ready sale wherever it has been introduced. All live Hardware dealers will serve the best interests of their customers by being in a position to supply them. The Shredder is very inexpensive, and its use will be appreciated in shaving ice for fruits, fancy drinks, oysters and clams on the half shell, olives, celery, iced tea, radishes, sliced tomatoes, and for many purposes in the sick room. It is being used largely by street vendors in Philadelphia, Baltimore and Washington for making "Snow Balls," which are variously flavored and sold to the children in the streets. These vendors make from $3 to $5 per day. The Hardware merchants in different sections will be well repaid for any trouble they may experience in introducing them for this purpose, by the large number sold. The manufacturers, the Enterprise Mfg. Co., of Philadelphia, Pa., have lately gotten out a very handsome

"Snow Ball" banner which they will be pleased to mail to all applying for them.

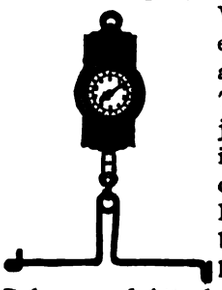
Rochester Giant Lamp.

The Rochester Lamp Co., No. 42 Park Place, New York, have perfected and are now placing on the market the Rochester Giant Lamp in an improved form, as here illustrated. One of its features is the arrangement of the air supply and vents. Intended largely for outdoor use, precautions have been taken to so regulate and control the air supply as to make it free from the influence of high winds or any swinging motion. In each corner is an interior tapering tube, perforated at the top outside and open at the bottom inside. This provides a series of channels for properly distributing currents of air on accepted tubular principles. At the bottom on all sides the metal is perforated freely to admit copious supplies of new air, the force of which, however, before reaching the powerful flame, is broken by first striking the solid interior wind guards. As made now, the fount is suspended in a wide circular metal band, which fits under the projecting rim of the oil pot and is sustained by four wire rods riveted to the corners of the frame. The bottom of the frame is glass, while the sloping roof or dome is lined with corrugated metal reflectors which prevent any under shadows. The vent at the top consists of two perforated metal cylinders or cones, causing a check on the upward current. Underneath

Digitized by Google

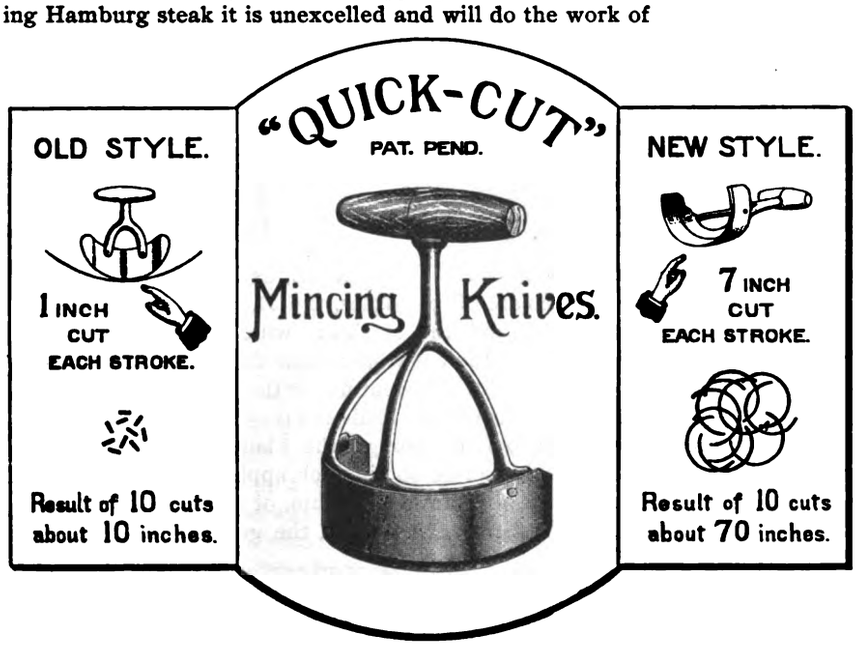
the cap is an asbestos lining to prevent overheating the metal and injuring the paint. There are no soldered joints, it is said, every connection being riveted.

Red Cross Polishing Mitten.



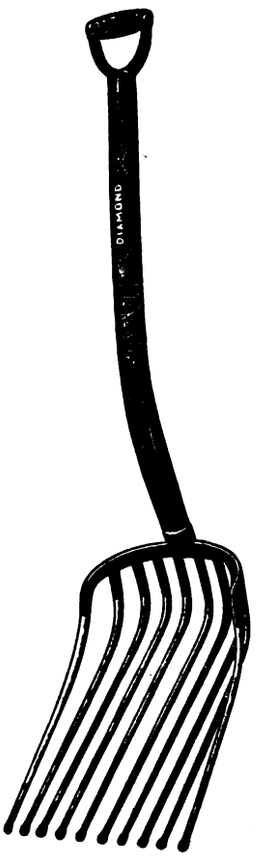
Among the numerous novelties turned out by Arlington U. Betts & Co., Toledo, Ohio, is the Red Cross Polishing Mitten here illustrated. It is made from a fine piece of

chamois skin, coated on one side with a sufficient amount of polishing material to last a whole season. The manufacturers state that it does not need moistening, doing away entirely with the powder and liquid polishes; is always ready for use and quickly rolled up and placed in the tool bag. Price, per dozen, $3.



Bicycle Weighing Attachment.

The accompanying illustration represents a Balance and Weighing Attachment offered by Landers, Frary & Clark, New Britain, Conn., and No. 298 Broadway, New York. The attachment is made of heavy japanned wire, bent as shown in the illustration. The spring balance with a dial face weighs 30 pounds by ounces. In use the bicycle to be weighed is hung by the upper bar of the frame on the hooked ends of the Attachment. The Balance and Attachment are sold complete at $3 each.



"Quick Cut" Mincing Knife.

The Gibbs Mfg. Co., Canton, Ohio, are introducing something new in the Mincing Knife line called the "Quick Cut." They claim that the new knife "does six times the work of the old style knives, and owing to the curved blade does it much easier and far better. It is the only Mincing Knife that cuts the full length of the blade, (7 inches) every stroke, no matter if used on a flat board or in the ordinary chopping bowl, and not clog. It is quickly cleaned, easy to sharpen and will tender beefsteak better by cutting the fibre and not bruising it. For chopping raw meat in making Hamburg steak it is unexcelled and will do the work of a rotary chopping machine for family use in less time than it can be set up, operated and cleaned; besides it does not mash but cuts the meat, thereby retaining all the juices, making the meat more palatable and nutritious. Every blade is made of fine crucible steel, scientifically ground to hold a lasting edge."

New Potato Scoop Fork.

The Ashtabula Tool Co., Ashtabula, Ohio, never introduce a new article until they feel that there is a need for it, and then endeavor to make the article so well that it will amply supply that need. Their new Potato Scoop Fork here shown, may therefore make sure of a successful welcome at the hands of dealers and users. It is just the shape of a steel or wire scoop, strong and light; has ten tines, is of a flat oval shape, and flattened points, and is warranted not to bruise vegetables. It is quite different from their old pattern. Full details as to prices, etc., can be obtained by application to the manufacturers.

Adams Diamond Vise.

The Adams Co., Dubuque, Iowa, are offering the vise shown in the accompanying illustrations. The Vise is made with a movable jaw so to extend and take in 12 inches. The small or rear jaw is held in place by a flat steel spring which forces the engagement of the ratchet. To change the jaw it is necessary to bear down on the jaw at the top of the face of the Vise, when the jaw may be slid back. It is remarked that the Vise is well adapted for riveting, as the small jaw can be set back, the piece riveted resting on the face of the anvil. The face is chill-hardened, ground and polished, 3½x7 inches in size, and is heavy enough it is stated, to stand all work usually done in a first-class blacksmith shop. All but the polished parts of the Vise are well painted. In Fig. 2, the Vise is shown with drill attachment, the drill head being formed to fit the movable jaw, and slides on from the side and is held securely by the groove into which it fits. The back rest for the drill slides over the anvil and is held in position by the ratchet in the same manner as the rear jaw of the Vise, but without any spring. The drill feed is controlled by the screw that operates the front jaw, being drawn out to the proper distance to accommodate the work before starting the drill. The manufacturers state the machine will drill holes up to ¼ inch, that

FIG. 1.

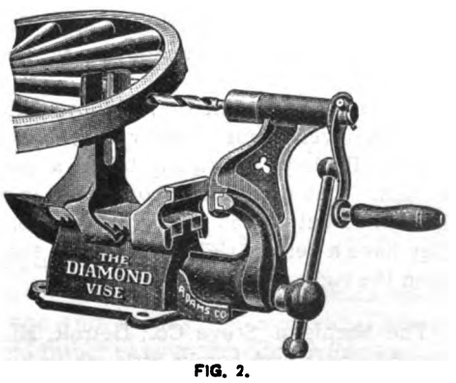


FIG. 2.

Digitized by Google

they will not send out a poor article, and that it is not to be compared with some some farmers' vise which have been on the market. Each Vise and each drill attachment is packed in a separate box, so as to reach the dealer in good condition.

Bridgeport Gets the Premier Plum.

The Premier Cycle Mfg. Co., whose 1895 wheels have been built for them at one of the largest and most complete factories in this country, will remove from New York City to Bridgeport, Conn., about August 15th, where they have purchased the magnificent site and factory of the Bridgeport Power Co., and will at once instal a plant for the manufacture of Helical Tube Premier bicycles that will enable them to turn out 18,000 machines next year. In selecting this plant, President J. H. Johnson has ordered only the best and most accurate machinery and tools obtainable, regardless of cost; Brown & Sharpe, Pratt & Whitney, and the Garvin Machine Co. supplying all the special cycle making machines which will guarantee absolute accuracy in fitting and finish.

The Premier Co. will use nothing but the finest and most expensive materials obtainable in the construction of their 1896 models, and this, in conjunction with their famous Helical Tubing, will keep their wheels in the Premier rank as the name indicates. The Premier Co. will not increase the weights of its 1896 models over those of 1895. Roadsters will scale from 19 to 21 pounds; ladies' wheels the same and racers at 16 to 18 pounds. A number of valuable improvements will be adopted, including a new tire made on a novel principle which assures extraordinary strength of fabric with the least thickness. New designs in hubs and crank bracket, a reduced tread, larger tubing of lighter gauge and unbreakable wood rims will be other features.

Helical Tubing is manufactured under United States Letters Patent No. 538,164, dated April 23, 1895, of which the Premier Cycle Mfg. Co. are the owners. Its advantages are well known, and it has been eagerly sought by other leading manufacturers, but the policy of the company is to retain it for Premiers exclusively. The company own other valuable patents, have a large and rapidly increasing list of agencies, among which is the Western Premier Cycle Co., of San Francisco, and starts in as an American cycle building concern with success definitely assured.

Increase of Wages.

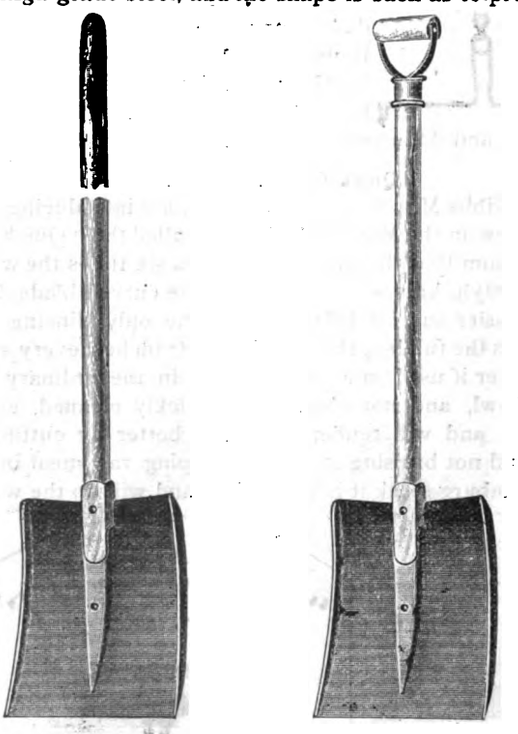
The wages of the employees of the Eastern Tin-Ware Co., Portland, Conn., have recently been increased $1 a week.

The Lamson & Sessions Bolt Works, Cleveland, Ohio, have advanced wages 10 per cent. About four hundred men will be benefited by the change.

The Rome Stove Works, Rome, Ga., voluntarily advanced the wages of its employees 12½ per cent.

The Buckeye Churn Co., Sidney, Ohio, are progressing along the even tenor of their way, demonstrating by sales that the Buckeye Churn has taken a great hold upon the market. The principle of concussion in relation to the production of butter has pretty well demonstrated itself, and they have a perfect right to feel that the Buckeye is built upon the right principle.

The Michigan Stove Co., Detroit, Mich., is sending its friends a neat and handy little whisk-broom holder. It is made of tin and tastefully colored yellow and gold. On the front of the holder appears the well known trade mark —"Garland" stoves and ranges.



An offer of $5000 in prizes has been made by a Chicago paper for a race from Chicago to Milwaukee, between motor-driven vehicles.

The Champion Wheelbarrows.

The Bryan Mfg. Co., Bryan, Ohio, upon page 47, present an illustration of one of their famous Champion Barrows, with some suggestions, which it will be well worth the while of any Hardwareman to carefully note. The points they make that dealers in wheelbarrows should have goods with a reputation, and those that are fully abreast of the times, are well taken. This company have won their present high position among the manufacturers of America by making first-class goods, and also making good any claim which they may advance. The Champion Barrows are known all over the country for their possession of many practical points, which make them light, strong, compact and reliable. The company will be pleased to send catalogues and prices, with full descriptions, to any who may be interested in this line of goods. Their products have won their way in the market by their own merits, and dealers who have handled them have demonstrated the truth of the statement that first-class goods are always the cheapest.

"Perfection" Steel Snow Shovel.

We show herewith illustrations of the "Perfection" Steel Snow Shovel (patented) manufactured by the Avery Stamping Co., Cleveland, Ohio. These shovels are made from heavy high grade steel, and the shape is such as to produce

a stiff, strong and reliable shovel, as well as a light one. The handles are of two styles, the D, which is two feet six inches long, and the straight, which is three feet six inches. While the cut would show the longer handle to be perfectly straight, it is bent under the blade, as in the coal shovel. The size of the blade is 14x15 inches. The handles are strongly bolted through the blades, and cannot work loose. Prices can be obtained on application to the Avery Stamping Co., of Cleveland, Ohio, or to W. W. Ferry, No. 88 Chambers Street, New York, the general Eastern agent.

A novelty that attracted the attention of farmers generally at one of England's recent agricultural shows was a portable pig cot. This article is constructed of corrugated steel which makes it very strong. It is of a circular form, a feature which gives it strong claims to portability, as it can be turned over on its side and rolled as easily as a barrel. The floor is of timber, supported on joists, and the ventilation can easily be regulated; its capacity is surprising. It is also suitable for lambs, dogs or poultry.

GAS AND OIL ENGINES.

As a motive power for domestic and light industrial purposes, gas and petroleum engines have no doubt a great future before them; indeed, the popularity which has been accorded these motors during recent years, though not by any means undeserved, has been remarkable. The gas engine was the first to make its appearance, and during the twenty years past has aptly demonstrated the fact that it is a durable, efficient and reliable motor. The oil engine is a later production of a fertile brain and has been a natural outcome of the success of the gas engine, as an oil engine is merely a gas engine fitted with an oil vaporizing apparatus. As a motor, the gas engine possesses several features of distinct advantage over the steam engine, and to small users of power these advantages are such as to appeal very strongly. Take as an example, a gas engine is ready to be started at any moment; there is no boiler fire to light nor steam to be gotten up, and for intermittent work, when the engine is at rest, there are practically no expenses being incurred, whereas with the steam engine the boiler fire has to be kept alight all the time. The absence of a boiler does away with the risk of a disastrous explosion, considerably lessens the chances of fire and enables space to be economized. In the care of an unskilled attendant the steam engine with its boiler becomes a menace, while with the gas engine this consideration practically does not exist, and not only is this the case, but the gas engine when once started will run for hours without attention. Contrast this with the coal eating monster which requires constant looking after to regulate the water and fuel supply, and to see that the water level does not get too low or the steam pressure too high, and one can readily see why the demand for good gas engines has increased so wonderfully. The above will apply with as much to force oil engines, but the latter has the additional advantage of being self-contained, and is therefore suitable for isolated places where a supply of gas cannot be obtained. It is true, that gas producing plants are made for use with gas engines in out-of-the-way places, but these are more especially intended for large power plants, and consequently will not be considered by us. The greatest field of usefulness for gas engines is in towns, and for oil engines in the country for farm purposes and uses where isolated or portable power is made necessary.

Robert Street in 1794 invented the first gas engine of which any record exists, but it was not till 1860 that a gas engine with a commercial value was introduced. The credit of this introduction belongs to Mr. Lenoir, the engine being a really practical one, and a number of them were manufactured and put into use. This engine resembled in some points of construction and appearance the horizontal steam engine. The piston advanced through a part of its stroke, and drew in a charge of gas and air until a certain point was reached. The valves were then closed, an electric spark exploded the charge, and the piston was driven to the end of its stroke, the exhaust taking place on the return stroke, as in a steam engine. The principal drawback to this engine was the enormous consumption of gas in proportion to the amount of work accomplished.

In 1876 a new engine was brought out, it being invented by Messrs. Otto and Langen. The following will give an idea of the working and construction of this engine: A vertical cylinder open at the top contained a piston, the piston rod extending upwards. The end of the piston rod was formed in the shape of a toothed rack, which worked in a clutch on the fly-wheel shaft. The fly-wheel being slightly turned round, the piston was thereby lifted, and a charge of gas and air drawn in through a valve. The valve was then closed, and the charge fired. The explosion drove the piston to the top of its stroke without, however, driving the fly-wheel, as the clutch was so arranged as to only impart movement to the shaft on the downward stroke of the piston. The piston rose in the cylinder until brought to rest by the action of gravity and atmospheric pressure. The rapid expansion of the gases inside the cylinder, and the cooling by the water jacket, had meanwhile caused the pressure under the piston to fall below that of the atmosphere. Then, when the piston commenced its downward stroke, by reason of its own weight and the external pressure of the atmosphere, it imparted a turning effort to the fly-wheel shaft. More than 5000 of these engines were sold in ten years, so it may be considered as fairly successful. Not till 1876 was the commercial prosperity of the gas engine assured, and this was due to the invention of Doctor Otto of the justly celebrated "Otto" silent gas engine. The important feature of the "Otto" engine is the cycle of operation, or, in other words, the order in which the various operations connected with the admission, explosion and exhaust of the charge are performed. The "Otto" engine is a single-acting engine; that is, instead of pressure being exerted on both sides of the piston as in a steam engine of the ordinary kind, pressure is exerted on one side only, the side farthest from the crank, the other side of the piston being open to the atmosphere. The series of operations known as the "Otto" cycle is as follows: The piston moves forward, and, the admission valves being open, draws in a charge of gas and air; on the return stroke the valves are closed and the explosive mixture compressed. At the moment the return stroke is completed, and the gases thereby compressed to the maximum pressure, ignition takes place, and the piston receives a powerful impulse forward by reason of the explosion. This forward stroke being completed, the piston returns again, and in so doing drives out the exploded gases through the exhaust valve. It is plainly seen from this that the engine receives an impulse once in every four strokes; that is, once in every two revolutions. The compression of the gases prior to ignition was the secret to the marked decrease of expense in the "Otto" engine over its predecessors. Other inventors had appreciated the importance of this compression, but the "Otto" engine was the first in which the idea was carried out in a thoroughly practical manner. Patents were taken out by several inventors in this field of construction as far back as 1860 for engines in which a compression cycle was adopted, and Beau de Rochas fully described the cycle of four operations just explained, in a pamphlet dated 1862. On account of this it is called by some writers the "Beau de Rochas" cycle, but it is more intimately associated with the name of Doctor Otto, and more generally styled by that name. During the protection obtained by letters patent in England, Crossley Bros. had the sole right to manufacture these engines in the United Kingdom, and by various improvements they brought the "Otto" engine to a high state of perfection for small power purposes.

The success of the "Otto" engine under the Crossley monopoly did not one whit dismay the competing manufacturers, but seemed rather to spur them to renewed exertions, and as a result several useful and ingenious engines were put on the market during the reign of the "Otto." One of the first of these, and one which recommended itself to small power users, was the "Bisschop" engine, invented and improved by Alexis de Bisschop during the years 1870–1874. A well-known English firm undertook the manufacture of the new engine. The "Bisschop" was of the ver-

Digitized by Google

tical type, the piston for about one-third of its upward stroke drew in a charge of gas and air. The mixture was then exploded and drove the piston to the end of its stroke. On the downward stroke the exhaust valve was open and the exploded mixture expelled. In this engine the compression plan was not adopted, and the engine received an impulse every alternate stroke. Several other engines different from the "Otto" in their mode of working were introduced successfully, the most important of these, the Campbell, the Stockport and the Griffin, we will give full particulars of in a later article.

The Household Garbage Carbonizer.

The Sanitary Construction Co., Boston, Mass., and No. 58 Pine Street, New York, are offering to the trade the Household Garbage Carbonizer. The manufacturers state that "it is a practical, simple and inexpensive device for the immediate disposal of kitchen garbage in a cleanly, healthful and convenient manner." The process consists in drying and carbonizing the garbage—turning it into charcoal that will burn without noxious odors and add heat to the stove, or may be used to start a new fire, supplying the place of other kindling, and is accomplished without interfering in the least with the draft or the regular work of the range, with no loss of room for space occupied by the Carbonizer and no extra fuel. The Carbonizer is placed in the stove-pipe between the stove and the flue of the chimney and becomes a permanent fixture of the range. It consists of a horizontal cylinder about one-third larger in diameter than the stove-pipe in which it is to be placed. One end of the cylinder is removable and attached thereto, on the inside is a semi-circular pan or scoop perforated along both sides and having solid ends and a tight bottom. The pan is sufficiently smaller in diameter than the cylinder to admit of its being easily withdrawn and to give a free passage to the smoke and heat from the stove, around it and through the perforated sides. When it is desired to use the Carbonizer, the pan or scoop is withdrawn by means of a handle, the refuse from vegetables that have been prepared for cooking or the waste from the dining-table placed in it, and the pan replaced in the cylinder. The heat from the fire coming in contact with the Carbonizer and the garbage in it, quickly drives off the water and after a short time the effect of evaporation is such as to turn the matter into charcoal. This without any attention whatever being given it and without any offensive odor. The carbonized waste, now in the form of charcoal, may be put upon the fire and utilized as fuel, burning with a clear hot flame, or after being left over night, may be used for kindling the morning fire in place of wood or shavings. The natural draft up the chimney prevents the escape of any odor into the room, and there is no odor from the chimney as the gases from the stove thoroughly deodorize the gases escaping from the drying garbage. It is further stated that this new contrivance has received the unqualified endorsement of various health departments. W. F. Morse & Co., Nos. 56 and 58 Pine Street, New York, are the general agents.

Yale "Stylo-Chiselry."

We have received from the Yale & Towne Mfg. Co., Stamford, Conn., and New York, a sample of their new art —"Stylo-Chiselry." It is in the form of a brass tablet bearing the following inscription: "The Yale & Towne Mfg. Co. Stamford Conn. Is Prepared To Execute In 'Stylo-Chiselry' Orders For Metal Signs And Name-Plates, In Varied Styles, Of Any Size And Wording." The new art should become very popular if the sample may be taken as a criterion.

The Barnard & Sons shear factory, Waterbury, Conn., was damaged by fire recently to the extent of $3000.

Bissell's "Premier" Carpet Sweeper.

We illustrate herewith the latest carpet sweeper placed on the market by the Bissell Carpet Sweeper Co., Grand Rapids, Mich. The "Premier" is an entirely new carpet sweeper both in design and construction. It contains all the latest and best "Bissell" features, making it a sweeper of the highest grade. The case is both distinctive and artistic in design and is made from the very best selected cabinet woods in the latest popular finishes. The pressure bar for discharging the pans is one of the easiest and simplest ever put in a carpet sweeper. The brush bearing in this sweeper is described as "without an equal for the ease and simplicity with which the brush can be removed. An easy touch of the finger and the brush is free." These

three points, together with the automatic adjustment of the sweeper to any and all kinds of carpet, make the "Premier" one of the handsomest, as well as one of the easiest of the "Bissells." It is a sweeper that must be seen and used to be fully appreciated. It is a sweeper with a future before it. It belongs to the Bissell Co.'s line of "Excluclusive" sweepers, and any dealer who desires to secure the *exclusive* sale of a first-class sweeper in his town, should write to the manufacturers for terms and prices.

Are Now Ready.

The Ideal Mfg. Co., New Haven, Conn., announce that they are now ready to furnish No. 3 Special and No. 6 Regular tools for the new 25-36 Marlin. The bullet illustrated here, shows six grooves, and weighs 104 grains. It is said that the mixture of one part tin to about ten parts of lead, produces the best results. Perfection moulds are also made, that will enable the shooter to make heavier or lighter weight bullets, as may be desired, full description of which may be found in the Ideal Hand Book No. 6, which will be sent to all who may be interested enough to ask it of the above address.

Colors in Steel.

The only cherry-red, if there be such a color, is that heat that just begins to show in heating up, or where the color begins to disappear in cooling. At this heat no work should be done on steel; it is a critical dangerous temperature. Above this the true colors are, in ascending—orange-red, dark orange, medium orange, light orange, dark lemon, medium lemon, light lemon, or granular, or fusion. There is no true white color, unless liquid steel be overheated enormously.

Attention is called to the advertisement of the Geuder & Paeschke Mfg. Co., Milwaukee, Wis., elsewhere in our columns. The writer of the advertisement evidently knows that the Hardware and house-furnishing dealer is a busy man, who wants all the facts in a nutshell, and he therefore suggests a great deal in a very few words. Read the advertisement and follow the suggestion.

The big lock factory of the Yale & Towne Mfg. Co. in Stamford, Conn., is running full handed and full hours per day and the prospects are a good business during the summer and winter months.

RECENT TRADE PUBLICATIONS.

We have received from the Standard Fiber Ware Co., Mankato, Minn., a colored folder, tastefully gotten up. On the front page appears the following: "If you were aware of such a ware as the 'Standard' Fiber Ware that for wear were unequalled by any ware anywhere, would you not be unwary were you to buy any ware made elsewhere than in Mankato, Minn.?" The rest of the little circular is taken up with the following: "'Say nothing, and saw wood.' This is an axiom, which in 'practical politics' signifies the quiet performance of much effective work without ostentation, and it aptly defines our policy during the past two years. Instead of endeavoring to force our goods upon a 'glutted,' and consequently reluctant market, we have been concentrating our energies upon the permanent betterment of our 'ways and means,' and in a series of successful experiments, looking to a marked increase, both in the quality and volume of our output. The results of this policy have amply justified its adoption, and we now find ourselves on the threshold of a general revival of business, prepared to furnish a vastly better line of goods than formerly, and to do this at considerably lower prices. The following are a few of the claims made for the Standard fiber ware, which we think entitle it to your careful consideration. Our pails, while larger than any other make on the market—cost no more. They are made of an especially strong fiber, wound and bound at both top and bottom with steel, are tough and elastic and will not chip at the edges nor split."

We have recently received from the Stanley Works, New Britain, Conn., and New York, their 1895 catalogue. It is a handsome volume of 158 pages bound in stiff boards of a maroon color bearing the well-known name "The Stanley Works 1895" in gold lettering. We desire to call the attention of our readers to the fact that, though the new catalogue is smaller than the old one, it is at the same time much handier, the information having been considerably condensed, which shows the spirit of progression. The frontispiece is a handsome picture of the Stanley Works in New Britain, Conn. The following announcement is made to the trade: "In presenting our Revised Catalogue and Price List we beg to call attention to its order of arrangement, which differs materially from our former catalogue. For the better convenience of our customers, we have condensed as much as possible and now show the various finishes of each kind of goods under one illustration, without regard to class number." The illustrations representing butts finished in antique brass and old copper, deserve special mention for their artistic merit.

The Tabb & Jenkins Hardware Co., Baltimore, Md., have added to the catalogue literature of 1895, a very handsome volume, devoted to their important gun and sporting goods line. It is some ten by twelve inches in size, contains sixty or more pages, and is illustrated throughout. The company do a very important business in goods of this character, and of course make a point of covering the entire field. A full page in small type is needed for the index alone. Full descriptions with prices are given in each case. Rifles of various kinds, full lines of ammunition, powder, bicycles and their accessories, gun clothing, game bags, gun implements, loading sets and tools, gun parts, reloading tools, revolvers, rods, shot, wrenches, etc., are among some of the few items enumerated. The catalogue covers the field entirely, and is neat, attractive, and full of valuable information.

The Keystone Farm Machine Works, York, Pa., have issued and distributed their catalogue and price list B. It is a neat and attractive little volume containing 90 pages and has a bright blue cover decorated with golden stars and the name of the company. The index contains the names of 53 articles of the agricultural implement line, so some idea of the variety of illustrations may be obtained. The catalogue still further contains rules of business and a cipher code to enable one to order by cable or telegram.

The Simmons Hardware Co., St. Louis, Mo., have issued a very complete catalogue on lamps. It contains 212 pages and describes and illustrates nearly every kind of lamp. In their declaration to the trade the company state that they are "the largest lamp dealers in the United States," and "carry in stock the most complete and comprehensive line of lamp goods ever collected in America."

"Patent Rapid Jack."

Alfred Field & Co., No. 93 Chambers Street, New York, are sole agents in the United States for the "Patent Rapid Jack," Combination Lift, Push and Haul Jack, Cramp and Box Spanner herewith illustrated. The agents state that this new device has been received in this country with favor and the initial invoice was speedily disposed of. Fig. 1 shows the Jack. Fig. 2 represents the Jack provided with a ratchet. These useful tools combine great power with

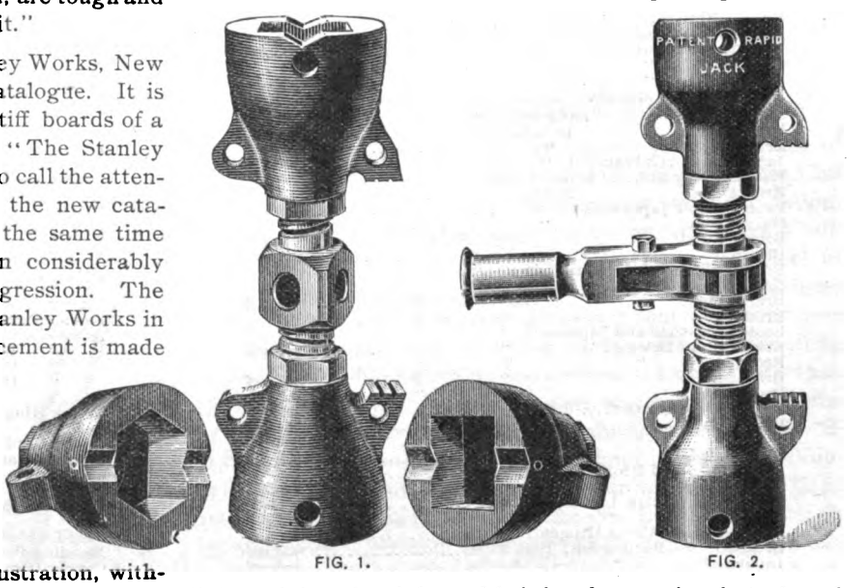

FIG. 1. FIG. 2.

light weight; the right and left hand screw is of steel, and the heads are of malleable iron; they are recommended, among other purposes, for raising, adjusting, suspending, stretching, cramping, etc. The right and left hand screw give double the ordinary speed. The heads are grooved for lifting or bending shafting. The heads form a box spanner.

E. Bissell, Son & Co., No. 12 Murray Street and No. 15 Park Place, New York, announce an unreserved sale of Granite Iron Ware, on Tuesday and Wednesday, August 20th and 21st, at 10 A.M. The sale is made by order of the St. Louis Stamping Co., and is described as a large and choice assortment. The goods will be sold in case lots and comprise a full line of tea-pots, coffee-pots, tea-kettles, dish pans, etc.

H. F. Dernell & Co., Athens, N. Y., have incorporated to manufacture ice tools and implements to be used in cutting ice; capital, $5000. Directors—Herman F. Dernell, Charles H. Eichhorn and Fred H. Eichhorn.

The Stanley Works Discount Sheet.

We have received from the Stanley Works, New Britain, Conn., and New York, a new discount sheet under date of July 20th, with changes on Hinges, July 31st:

Ball Bearing Washers	40%

Something About Ladders.

The Goshen Mfg. Co., Goshen, Ind., well known as the makers of the celebrated "Hercules Hay Slings and Carriers," have recently begun the manufacture of a complete line of ladders and painters' stagings. Among those deserving mention are: Boyer's Automatic Self-Locking Step Ladder; this is an entirely new invention on which patents are now pending. The leading features are a shelf even with the top of the ladder and a staple brace at the steps that prevents the ladder from coming apart, as well as acting as a brace. The ladder is made exceptionally strong and when opened for use it is self-locked in the opened position, so that it is secure from either opening or closing while in use. The shelf is automatically raised to a horizontal position in opening the ladder. Boyer's Windlass Extension Ladder is also worthy of more than passing mention, it being provided with automatic self-locking and unlocking hooks to hold it in its extended position as shown in the illustration. The company are making a reliable class of goods that will be sought for by merchants who desire to build up and sustain their reputation for handling only first-class goods. Fig. 1 of the illustrations shows Boyer's Self-Locking Step Ladder folded and in position for use. Fig. 2 represents Boyer's Windlass Extension Ladder. Fig. 3 shows the Common Extension and Single Ladder made by the company and Fig. 4 represents the Hercules Hay Sling and Carrier in use. This contrivance is too well-known to need description.

Wire Men Effect a National Organization.

A meeting of a number of the largest manufacturers of wire goods in the United States met at the Gibson House, Cincinnati, Ohio, July 23d, and organized a national association. As a result of this organization, prices on wire goods will go up from 10 to 25 per cent. as that is the main object of the new association. The manufacturers say that such an advance is necessary in view of the fact that while the raw material has advanced the wire-goods people are still selling their wares at hard-time prices—prices scarcely more than the cost of making. Those present were Fred J. Meyers, of Hamilton, Ohio; F. B. Hart, of Lafayette, Ind.; W. B. Melish, H. H. Suydam and A. G. Belmer, Cincinnati, Ohio; H. A. Hildreth and W. T. Russell, Worcester, Mass.; C. L. Postelwaite, Detroit, Mich.; C. Logan, Louisville, Ky.; P. H. Wickwire, Cortland, N. Y.; Fred T. Vaux, Chicago, Ill.; Proctor Patterson, Cleveland, Ohio, and A. F. Blanchard, Detroit, Mich. The Ludlow-Saylor Wire Co., of St. Louis, Mo., Taylor, Dean & Co., of Pittsburg, Pa., and the Excelsior Wire & Iron Co., of St. Louis, Mo., are among the firms who joined the association by letter. Fred J. Meyers, of Hamilton, Ohio, was elected president, and H. H. Suydam, of Cincinnati, secretary. The headquarters of the association will be located in that city. The wire men present said that business in their line has greatly improved, and would in fact be as profitable now as before the panic if they could get back to 1891 and 1892 prices. They said that wages have been increased at many of the works. The meeting continued over Wednesday, the delegates being engaged in making a schedule of uniform prices on all classes of wire goods. Another meeting will be held at Boston, Mass., in September.

A German veterinary surgeon has discovered a method by which horse shoes can be successfully manufactured from paper. The paper is impregnated with turpentine to make it waterproof. The inventor claims that a horse wearing these shoes cannot slip on greasy roads.

Woodrough & Hanchett Co.

The trade everywhere will learn with regret of the temporary embarrassment of the Woodrough & Hanchett Co., Chicago, who have confessed judgment on notes aggregating some $80,000. The liabilities of the company are reported at about $180,000, and the assets at $240,000. The assets consist of merchandise to the amount of $100,000 and accounts receivable of about $140,000. The liabilities consist of about $80,000 due the judgment creditors and sums due eastern houses for goods purchased by the company. R. L. Woodrough, the president, states that all the debts of the company will be paid. "Dollar for dollar will be paid," said he, "and this will not down me. I have fought the battle of life successfully up to this time and some time I will resume the fight." Mr. Woodrough is well-known all over the country as a man of probity and energy and will receive the earnest sympathy in this temporary check to a prosperous career.

A dispatch from South Norwalk, Conn., under date of August 7th, says: "The Lockwood Mfg. Co., one of the largest manufacturers of builders' Hardware in the world, applied to-day for the appointment of a receiver. The company had endorsed heavily on the paper of its Western agents, the Woodruff & Hanchett Co., wholesale dealers in Hardware of Chicago, who failed on last Friday."

The Tinkham Cycle Co.

The Tinkham Cycle Co., incorporated under the laws of New Jersey, with a capital stock of $100,000, has been organized for the manufacture and sale of bicycles and carrier tricycles, also for the exclusive sale in New York City, Long Island and the metropolitan district of the Stearns Bicycles, to succeed and to conduct on a more extensive scale the business of the former Bidwell-Tinkham Cycle Co. The officers of the new company are: Julian R. Tinkham, president: Ernest F. Walton, treasurer and general manager; Lloyd McKim Garrison, secretary. The company will retain headquarters at Nos. 306, 308, 310 West Fifty-Ninth Street, New York, and will maintain present branches at No. 20 Warren Street, New York, No. 1213 Bedford Avenue, Brooklyn, also at Newark, N. J., Newport, R. I., and Chicago, Ill.

The company are remodelling and refitting their renting and repair departments and when finished they will be among the most complete and handsome of their kind in this country. The Tinkham Carriers put out by this company are meeting with great success. Among the large firms using them in New York City are Bloomingdale Bros., H. Maillard, the chocolate manufacturer, Richard Webber, who operates an extensive retail butcher shop in the city, and many others.

George T. Moe & Co., is the name of the successors of Jones & Moe, manufacturers' agents, and have moved into a store at No. 30 N. Fourth Street, Philadelphia, Pa., where they have an excellent opportunity to show goods, and a large storage space. They carry a heavy stock for several of the leading factories of the country. They work wholly on commission, and do a very satisfactory business. Among the companies they represent are the Moon Range Co., the Rochester Lamp Co., George R. Moon, J. C. Granger, George Reichman, Eugene Munsell & Co., F. E. Kohler & Co., the Columbia Refrigerator Co., John G. Witte & Bro. and Patterson, Harral & Gray.

C. A. Benjamin, who has been manager of the L. C. Smith Tire Co., Syracuse, N. Y., since its organization, resigned his position on August 1st, to accept one with the Barnes Cycle Co., of the same city. He has been succeeded by H. W. Chapin, who is qualified in all respects to successfully fulfil the duties of the position.

Review of the Markets.

Money: Dullness characterizes the New York loan market. The expectations of a large fall trade have to no extent influenced the market. Call loans can be easily procured at 1 per cent; this naturally has no good effect on time loans which are quoted 2@2½ per cent. The bank reports of Saturday, August 31d, show an increase in both the reserve and deposits, the former increasing $4,161,000 and the latter $2,624,000. Business prospects are bright, all conditions pointing to flourishing trade in the autumn. The reported largeness of this season's corn crop is expected to more than make up for the shortness of the wheat and cotton crops. Railroad officials are showing faith in the predictions for a prosperous fall trade, by purchasing largely of new cars, locomotives and other railroad supplies. The increase in wages all over the country may also be taken as an indication of which way the tide is setting.

Hardware: August opens with the Hardware market in a satisfactory state. Jobbers and retailers generally have been laying in rather large stocks, fearing still further advances in prices; this has tended to maintain firmly the new prices to the manufacturers' entire satisfaction. The building movement seems to be on the increase, creating a demand for builders' Hardware. The recent principal advances have been in Hinges and agricultural implements. The fine crop prospects, it is thought, will influence the purchases of the country merchants in the fall.

Wire Nails: There have been no changes in the prices of Wire Nails since our previous issue, nor are any expected for some time, though it is quite probable that an advance may be made at the meeting of the Association, which is scheduled for somewhere near the end of the present month, when the September arrangements will be made. We have been told by a gentleman who, for the past twenty-seven years, has been connected with a prominent nail company of this city, that it was expected that the high prices ruling would cause a falling off in the trade, but nothing of the kind has occurred, and the market is in a flourishing condition. Quotations are as follows: For carload lots, $2.05 per keg, f. o. b., Pittsburg; less than carload lots, $2.15 per keg, f. o. b., Pittsburg. The New York price for carload lots of Wire Nails on dock is $2.20 and small lots from store $2.30. The same allowances of five cents per keg on lots of 1000 kegs and over are made.

Cut Nails: The same circumstances governing the Wire Nail trade may be said to be in effect as regards Cut Nails. The following prices are ruling: Carload lots, Pittsburg, $1.80; less than carload lots, $1.85. New York prices are: Small lots from store, $2.10; carload lots on dock, $1.95. To jobbers taking from one mill during one calendar month 500 kegs or over, 2½ cents rebate per keg is allowed, and on 1000 kegs 5 cents per keg is made. Ten cents extra will be charged for half kegs.

Hinges: On July 31st the Stanley Works, New Britain, Conn., and New York, declared a 10 per cent. advance on the prices of both Strap and T Hinges. Their full revised list with the increase of July 31st, will be found upon another page of this issue.

White Lead, Red Lead and Litharge: The following quotations are subject to change without notice: White Lead, dry or in oil, Red Lead and Litharge in kegs:—In lots of less than 500 pounds, 6 cents net; in lots of 500 pounds and over, 5½ cents.

Zinc: Values for the present are 4@4½ cents, as to quality and quantity, for jobbing parcels.

Putty: The market remains steady at $1.45@2.25, as to quantity, package and place of delivery.

Linseed Oil: Quotations are 56 cents per gallon for raw and 59 cents per gallon for boiled. Calcutta raw, 57 cents per gallon.

Clapp & Co., bankers and brokers, New York, in their weekly letter, say: "Value is a term employed to express the degree of desirability of an article, a service, or the equivalent of either. Intrinsic value is a term to express the fact that an article or service has desirability not dependent on other articles, services or agreements. Money is any medium of exchange agreed upon by common consent or by legal enactment. A unit in money is the multiple that by custom or legal enactment is expressed in estimating value. An integer of value is any whole portion which is a proportion of all values less than all. The value of gold or silver is to be judged by the degree of desirability indicated by the demand for either, expressed in units of money. As long as Government has outstanding promises to pay nearly 1000 million metal dollars of intrinsic value, and by common consent and legal enactment these paper promises circulate as money, there is only one question in national finances, and that is the good faith of the people as shown in the maintenance of reserves. Straws.—There are only 52 millions of silver dollars in circulation, and there are 371 million coined and in the Treasury. The issue of gold certificates has been resumed. The exports of merchandise, year ending June 30th, were $731,960,319, or $75,732,942 more than imports. Immigration, 276,136 persons, or 35,476 less than in 1893-4. There are 418,676 miles railway in the world, of which North America has 201,625; South and Central America, 23,957 miles; Europe, 148,230; Asia, 24,102; Africa, 7695; Australia, 13,067. World's railway capitalization is about $33,976,589,087. The Government gives average capitalization of United States railway capitalization as $62,951 per mile, against $97,099 in Germany, $94,751 in Austria-Hungary, $224,082 in United Kingdom, $130,459 in France, $89,234 in Russia, and $47,744 average for the world's total mileage."

THE PHILADELPHIA TRADE.

July and January are usually the months most dreaded by the Hardware jobber, as in January the new year monopolizes attention, compelling settlements of all kinds, inventories of stocks, overhauling of prices and general renovating. July, on the other hand, is a midsummer month when vacations are the rule, orders are few and far between, and the few men who are left at home are kept very busy in the heat doing the work of the fortunate ones who are at the seashore or the mountains. Usually the July sales are decidedly slim, so this work does not fall heavily on those at home, but it is pleasant to report that this year has been a decided exception to the rule, and jobbers are able to report the largest sales of any July for years. It is difficult to always see whence this improvement comes, but apparently it is quite general, and there seems to be a growing belief that we are now on the eve of better times. Prices are still on the upward turn, and some lines which have so far remained steady, are now falling in the line and joining in the upward procession, while we understand that advances all along the line are in contemplation on many kinds of shelf Hardware.

It is a curious fact that this advancing market is a new experience to many men now in business. For sixteen years—ever since 1879—there has been a declining market, and many men who are now in control of large business houses, have never seen an advancing market, and do not know what it is. Under such circumstances it is natural that having seen a declining market throughout all their business experience, they should look with suspicion and incredulity upon the recent advances. Their disbelief, however, is rapidly melting away, and the conviction is becoming general that the average of prices is to be higher, and even the doubters are glad to welcome the change.

During the past two weeks almost all the changes have been in the direction of higher prices, and among the goods that have advanced may be named rope, fodder yarn, cow bells, wire clothes lines, shoe lasts, wire, etc. The one exception to this rule has been in double-pointed tacks, which are somewhat weaker, the combination having decided to lower the price. As this was purely an arbitrary price, the change has long been anticipated and excites little remark.

BIDDLE HARDWARE CO.

THE CLEVELAND TRADE.

There is nothing particularly new to report in this market. The outlook still continues good for fall trade, and prices are well maintained. July is notorious as being a month, in which if any weakness is to develop, it will be shown. We have reached August without any indications of weakness, and it is therefore to be supposed that prices now in force will be maintained through the fall.

The demand has not been very large, but it has been healthy, and much better than for the corresponding month of last year. We very much prefer to see the improvement come in this way, rather than in an enormous increase which cannot possibly be maintained.

THE MCINTOSH-HUNTINGTON CO.

THE DAVENPORT TRADE.

The new Nail card and the quotations of so much for extras, above base, plus fifty cents, is very confusing and unsatisfactory; the base price of Nails has always meant and has been understood to mean, the price of the largest Nails or the cheapest Nails on the list, but now the base price means fifty cents less than the price of the larger Nails, or of any size Nails on the card; and we can see no good reason for this new departure.

A new list on Farming Tools, usually referred to as steel goods, was issued on the first of August, and instead of one uniform discount on this line, there are now many, and this radical change will probably result in forcing the jobbers to make net prices on each article on the list; on the whole, there is a large net advance.

The Weir Plow Co., of Monmouth, Ill., will move to the Tri-city, locating in Moline, Ill. The arrangements for buildings have been completed, the plans including three large buildings, two of them 80x800 feet and one 80x600 feet. This mammoth establishment will possess all of the modern improvements, including electric lights and compressed air for heating purposes; the railroad track system will be arranged so that twenty-four cars can be loaded at the same time. They employ 500 workmen, and this alone will increase the population of this neighborhood at least four thousand.

Strap and T Hinges, Iron Bench Screws, Malleable Iron, Block Coil Chain, Iron Measures, Rope, Crowbars, Screw and Strap Hinges, Wood Choppers Wedges, Lane's Barn Door Hangers and Track, together with many other goods, have advanced.

The price of Barb Wire has not advanced in proportion to other goods; we understand there is a strong prospect of a permanent organization being formed which will

Digitized by Google

probably cause higher prices in the near future. It is intimated that the price of Wire Nails, for September, will be twenty-five cents per keg higher. The weather could not be improved upon for the convenience of the farmers in securing their abundant harvest, or for the personal comfort of all. Sealed proposals for building the new government bridge across the Mississippi River here, will be opened in a few days. Trade is unusually good for this season of the year. Collections are not what they should be, and it is just possible that many are buying in excess of their means to secure goods for future wants on account of anticipated advances.

Sickels, Preston & Nutting Co.

THE MINNEAPOLIS TRADE.

There is a better feeling, the jobbers particularly being quite busy. While retail business is not very good, still about what is expected during mid-summer. There is a good prospect of there being considerable building locally this fall. It is pretty safe to say that the crops will be exceedingly good with prospect of fair prices. Everyone is pleased with the recent advances in prices, as it shows the general improvement that certainly will be of benefit to all. Prices have been too low. Everyone with a stock of goods has suffered very material loss from season to season. There is some satisfaction in seeing a quantity of Nails, for instance, go out, on which there is a round margin of profit on account of the advance. Labor as a rule is quite well employed in this section. At present a great many men have gone to the harvest fields. While we do not look for a boom, it certainly does seem that we are quite likely to have much better times here for some months to come than we have had for the past two years.

W. K. Morison & Co.

THE BALTIMORE TRADE.

Business continues to improve. Orders are coming in freely from all of the Southern territory, and in quantities more satisfactory than for any period within the past eighteen months. Higher prices have no doubt stimulated many to buy early, but there seems to be little of a speculative nature connected with their purchases. The lines now selling are such as the retailer will soon have a demand for, although staples are coming in for a fair share of attention.

The gun and gun clothing business this year has started off very auspiciously. Last year the tariff struggle acted as a check on many purchasers. That feature is absent this season, with a consequent result of a much better prospect ahead. Ammunition still continues in its old position of last season. It heads the list of non-profit bearing commodities, though why this should be remains a mystery.

In general, Hardware advances are of daily (no! hourly) occurrence. The most marked advance, perhaps, was that brought about by the Cradle and Snath manufacturers last week. New list—new discount! A sort of "double ring bush-whacker"! Let the good work go on!

The Tabb & Jenkins Hardware Co.

Ladd's Discount Book.

William J. Ladd, who is well-known as the author and publisher of Ladd's Discount Book, has issued a statement to the trade in which he says that with "the prospect before us of probable changes in prices, and the necessity of new lists and discounts, it will be well to consider the fact that the trade will be benefited if all manufacturers make their list prices, when more than two figures are used, terminate with a cipher as far as practicable. Some of our largest manufacturers have adopted this as a rule and are thus enabled to use Ladd's Discount Book to greater advantage. List prices ending with o (when more than two figures are needed) save work, and work takes time, and time means money. An illustration at 60, 10, 10, 7½ & 2%: $5.80, a good list, nets $1.70; $5.75, a poor list, nets $1.69. The difference in the net is very slight; the difference in convenience is considerable, whether figured out the old way or obtained by Ladd's Discount Book without figuring. The distribution of Ladd's Discount Book is so extensive and its adoption so general that the users thereof ought to be considered in making list prices. Manufacturers will also find it a great convenience to consult the book in formulating new discounts, and all the trade, not only in the United States and Canada, but also in countries to which American manufactures are exported, will be benefited thereby. Where American money is not used and among people not familiar with our high lists and combination discounts, Ladd's Discount Book has proved invaluable, so that to-day this book is being constantly referred to, not only in America, but in almost all the countries of the world."

The best coating for iron pipes that can stand the heat at 250 degrees or more is made with good asphalt lacquer laid on thinly. In order to tint the coating an oxide in pulverized form, of any metal is added—as an example, if good zinc or white tin is mixed with the asphalt the result is a shade of gray, while red lead gives a brownish tint. If the asphalt is laid on thinly, and "tin bronze" is lightly dusted over it, the coating will be of a very attractive shade.

The rolling mills of the National Saw Co., Middletown, N. Y., started up on Monday, August 5th, with a full complement of hands. This plant has been idle for two years. It was found absolutely necessary to start work at the mills on account of the increase in business and the large number of orders booked.

My dear, dear Lord,
The purest treasure mortal times afford
Is spotless reputation---That away
And wheels may be painted iron or gilded clay;
An honest cycle that has stood the test,
Is the famous one with the Humber crest·
In quality is its fame; both grow in one;
Take quality from it and its fame is gone.

HUMBERS have been the favorite Bicycles of two generations of riders. They are still the - - STANDARD.

Humber & Co., America, Ltd.,
No. 318 Broadway,
New York.

E. Bissell, Son & Co., No. 12 Murray Street and No. 15 Park Place, New York, have announced a special unreserved sale of table and pocket cutlery and like goods on Tuesday, Wednesday and Thursday, August 13th, 14th and 15th. This sale is described as comprising a very large and desirable assortment of these goods, and is by order of the manufacturers and importers.

On August 2nd the copartnership existing under the firm name of Terrell & Vroom, New York, was dissolved by the death of Henry S. Vroom. Isaac H. Terrell, the surviving partner of the firm, having purchased from the legal representatives of the late Henry S. Vroom all his share, interest, and property of the copartnership, will settle all debts, and collect and receipt for all claims of the late firm of Terrell & Vroom.

The Westinghouse Electric & Mfg. Co., of Pittsburg and the Baldwin Locomotive Works, of Philadelphia, two of the largest industrial concerns in America have joined interests. It is said that the new company will give employment to 10,000 men during the busy season. The combined capital of the united concerns is close to $20,000,000.

The Striking employees of the Canton Steel Co., of Canton, Ohio, have returned to work with a general increase in wages of 13⅓ per cent. to affect all departments engaged in the strike. About 275 men were involved.

Perhaps You Know All About It!

THE NEW ERA RADIATOR.—Its construction is very simple, but as a heat giver and a saver of fuel it surpasses all others.

Prices also are lower this year. Full particulars may be had by addressing

WILMOT CASTLE & CO.,

A. and F. Clifford, who were formerly in the Hardware and house-furnishing business, and as such merchants became well known to the trade, have commenced the bicycle business, under the name of the New York & Kings County Cycle Co., at Nos. 45 and 47 Bond Street, Brooklyn, N. Y. They will pay especial attention to repairing and retailing, and would be pleased to receive bicycle catalogues, and hear from manufacturers of wheels and accessories, with a view to taking agencies for Long Island.

W. T. Norton, lately general sales agent and first vice-president of the American Axe & Tool Co., whose removal to Cleveland, Ohio, was recently noted in these pages, has become actively associated with the Avery Stamping Co., of the city named. Mr. Norton is a wide-awake, active business man, and the company is to be congratulated upon its new accession to an already strong working force.

The firm of S. Landon & Son, Angola, N. Y., was dissolved on July 24th by mutual consent, S. Landon selling out to H. S. Landon, who will carry on the business heretofore conducted by said firm. All accounts of said firm will be settled with H. S. Landon.

BICYCLE TRADE RECORD.

Bicycle manufacturers and dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Companies, Stores, Etc.

Binghamton, N. Y.—Negotiations are pending between President Tierney, of the Board of Trade, and other interested parties looking to the establishment of a fifty-thousand-dollar bicycle factory either in Binghamton or Utica.

Bridgeport, Conn.—M. Larson, sporting goods, etc., will open a new store.

Canandaigua, N. Y.—Stanley G. North and others are organizing a company, with a capital stock of $20,000, to manufacture a bicycle invented by Mr. North.

Charlotte, Mich.—Steps are being taken looking to the establishment of a bicycle factory.

Chicago, Ill.—The Enterprise Cycle Mfg. Co. has been incorporated by T. P. Keyes, A. L. Funk and L. Silverman. Capital stock $250,000.

Chicago, Ill.—The Climax Cycle Co. has been incorporated by L. T. Alton, F. N. Goulding and John Hurley to manufacture bicycles. Capital stock $1,000,000.

Chicago, Ill.—The Czar Cycle Co. has been incorporated by Park E. Simmons, No. 164 Dearborn Street, Carl E. Gibbon and James H. Burbank to manufacture cycles. Capital stock $15,000.

Columbia, S. C.—J. W. Mixson & Co., bicycles, etc., have opened a new store and are agents for the Triangle and Peerless. They will do a bicycle repair business and have added an enamelling outfit.

East Lynne, Mo.—J. E. P. Williams, general merchandise, has added a line of bicycles and bicycle sundries.

Elgin, Ill.—The Elgin Cycle Co., incorporated by T. M. Duncan, R. D. Hollenbeck and C. H. Enc. Capital stock $100,000.

Elkhart, Ind.—The Acme Cycle Co. has been incorporated by Delos N. Weaver, W. B. Pratt, John H. Broderick, Peltrie Hill, Louis P. Holladay, W. L. Collins, John T. Wolfe, J. L. Broderick, Otis D. Thompson and Cullen W, Green to manufacture bicycles. Capital stock $50,000.

Grand Rapids, Mich.—Homer L. Boyle, William Chambers and others are reported to be organizing a company to manufacture bicycles. Mr. Boyle was formerly a designer for the Pope Mfg. Co., and he and his associates own several patents. They are reported to have secured factory facilities and will turn out 100 experimental wheels on an entirely new line.

Grand Saline, Tex.—Meeks & Parsons Co., Hardware, will take up bicycles. This concern is a consolidation of P. B. Meeks and J. E. Parsons & Co.

Helena, Montana—T. C. Power & Co., agricultural implements, have added a bicycle department and placed the same under the management of C. W. Sparr. The Sterling and March wheels will be handled, also bicycle supplies.

Indianapolis, Ind.—The S. A. Haines Co., Hardware, announce their intention of taking up a line of bicycle sundries, and extend an invitation to manufacturers to correspond with them in reference to this matter. They are the selling agents for the Star Bros. Bell Co.'s line of bicycle bells.

Lafayette, Ind.—Florer & Lindsay, proprietors of the Novelty Ring Works, are perfecting arrangements for the establishment of a bicycle factory to manufacture a wheel recently patented by Mr. Lindsay and for which he claims a number of new and valuable features.

La Porte, Ind.—J. M. Bryant and others are reported to be organizing a company to manufacture bicycles from a new model, the special feature of which will be the fact that the rim will be built of papier mache.

Minneapolis, Minn.—The Bicycler's Security Association has been incorporated, with a capital of $50,000.

New Albany, Ind.—J. S. Evans is preparing to manufacture bicycles, under the style of the Evans Mfg. Co. This factory will be in operation before next season.

New Castle, Pa.—Frank T. Fowler, of the Fowler Bicycle Co. of Chicago, is reported to be negotiating with a view of locating a plant for the manufacture of bicycles.

New Haven, Conn.—The New Haven Chair Co. has decided to go into the manufacture of bicycles and have commenced to take steps in that direction.

New York, N. Y.—The Bamboo Cycle Co. has been incorporated by Edward Howe, Henry Whittemore and Henry V. Nash, of New York City, to manufacture cycles. Capital stock $15,000.

New York, N. Y.—The Starr Cycle Co., at No. 55 Second Street, has opened a branch salesroom and riding academy at Asbury Park.

New York, N. Y.—R. H. Macy & Co., Sixth Avenue and Thirteenth Street, have commenced the sale of bicycles and have opened a bicycle riding academy on Fourteenth Street, the building selected being the old Scotch Presbyterian Church. They will push the sale of the Oriental, Model No. 3.

Norwich, Conn.—The Hopkins & Allen Mfg. Co., at a recent meeting of the directors, decided to go into the manufacture of bicycles, and preparations are now being made providing for the new industry.

Plymouth, Wis.—Trowbridge & Gaffron is the name of the new bicycle firm composed of William Trowbridge and B. A. Gaffron.

Rome, N. Y.—James H. Owens and others are organizing a company, with a capital stock of $50,000, to establish a bicycle factory.

San Diego, Cal.—George T. Lemon, bicycles, has accepted the agency for the Tribune, which will be handled in connection with the Phœnix.

Skowhegan, Me.—Steps are being taken looking to the organization of a company to manufacture bicycles.

St. Louis, Mo.—The Randolph Heckel Hardware Co. have decided to establish a bicycle department and will carry a full line of special makes.

Washington, D. C.—L. Tindall, bicycles, has commenced business at No. 607 F Street and is handling the Warwick and Dauntless bicycles.

Washington, D. C.—W. D. Hadger, bicycles, opened a new store at No, 1024 Connecticut Avenue and carries the Liberty. He also has a branch store at No. 907 Ninth Street for the sale of second-hand wheels.

Changes and Removals.

Elmira, N. Y.—The Eclipse Bicycle Co., of Beaver Falls, Pa., have concluded negotiations for the transfer of its manufacturing plant to Elmira. The new factory will be ready for occupancy within sixty days. The present force of 400 employees will be increased to 600.

Kitchi, Mich.—A. L. Hardlin & Son, Hardware, bicycles, etc., firm reported to have dissolved partnership.

Portland, Me.—The Scanlan Co. has been succeeded by the newly-organized Puritan Cycle Mfg. Co.

Rochester, Ind.—William R. Goss & Co., Hardware, bicycles, etc., have sold their interest in the business to John R. Barr, and in the future the style of the firm will be Goss, Barr & Co.

Warren, Ohio.—The Paige Tube Co. has been succeeded by the Ohio Tube Co., and the following new officers elected: President, O. C. Barber; vice-president, H. C. Viele; treasurer and general manager, E. D. McCrum, Jr.; secretary and superintendent, C. J. Bray.

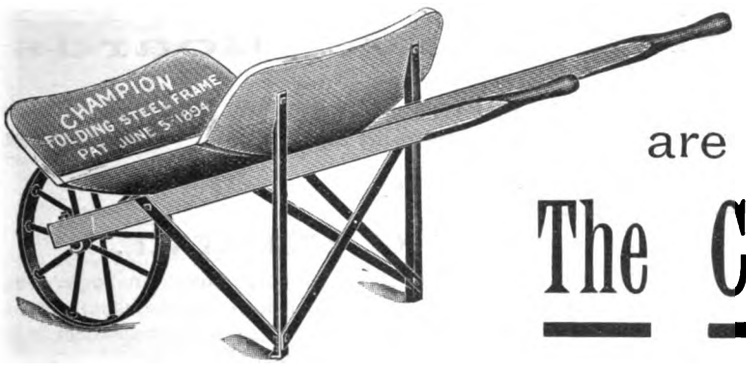
New Goods and Improvements.

Chicago, Ill.—Morgan & Wright, bicycle manufacturers, at No. 59 West Lake Street, will erect a new five-story and basement brick factory building, for the manufacture of bicycles. The plant will cost $25,000.

Kenosha, Wis.—The Sieg & Walpole Mfg. Co., of Chicago, has purchased factory building, and will use it in the manufacture of bicycles, employing over two hundred men. Their present headquarters on Wabash Avenue, Chicago, will be continued. They will take possession of their new plant August 1st, and will manufacture Windsor bicycles and bicycle sundries.

Newark, N. J.—The Howard A. Smith Co., manufacturers of the American Excelsior bicycle, No. 328 Broad Street, announce the preparation of greatly enlarged facilities for bicycle manufacturing next season.

New Haven, Conn.—Lavigne & Scott Mfg. Co. are placing on the market the "Sandow" bicycle wrench.



Peoria, Ill.—Rouse, Hazard & Co., bicycle manufacturers, announce their intention to enlarge their factory building, so as to double their capacity, and to turn out 10,000 bicycles next year. They now employ about 125 hands.

Weedsport, N. Y.—Charles Hudson, bicycle sundries and repairing, erecting addition to accommodate increasing business.

Wilmington, Del.—The McLeer & Kimball Carriage Mfg. Co. is reported to be preparing to enter extensively into the manufacture of bicycles.

"Mosaic" (TRADE MARK.) Enameled Stove Boards.

OFFICES AND SALESROOMS:

NEW YORK, 260 Canal St. CHICAGO, 225 Fifth Ave. PHILADELPHIA, 249 S. Second St. BOSTON, 90 Canal St.

FACTORY: BELDING, MICH.

TO THE TRADE.

BELIEVING there is a demand for a superior line of Stove Boards and judging from the success we had last season with the "Mosaic" Enameled Board, we think it would be to your advantage to look at our samples before placing your order. We carry a full line of stock in our New York, Philadelphia and Boston salesrooms, and will be glad to answer all inquiries and quote prices.

POINTS OF EXCELLENCE.

The Plates used for our Enameled Stove Boards are 20 per cent. heavier than used on any other Stove Boards manufactured.

It Requires a temperature of 240 degrees to finish them, consequently the enamel is indestructible.

Washing or heating will not injure the surface.

The Most durable, the handsomest and finest finished Stove Boards on the market.

BRUCE & COOK,

186, 188 and 190 Water St., 248 and 250 Pearl St.,

NEW YORK.

Just What Every Manufacturer Wants!

The Reference Book

OF THE

Hardware and Kindred Trades of the United States and Canada.

THE Book contains, in the most condensed and convenient form possible, the Names and Ratings of all firms in the following Trades in the United States and Canada:

Hardware Dealers.
Dealers in Sporting Goods, Bicycles, Firearms, &c.
Agricultural Implement Dealers.
Stove Dealers.

Sent (Postpaid) on Receipt of

TWO DOLLARS.

CERTAIN marks are printed after each name, showing the line or lines of goods handled.

The work is complete, condensed and convenient, and will be found especially desirable in sending circulars, on account of the street numbers. The ratings enable the user to select names of any specified rating or over that may be desired.

In cities the lists are classified—Hardware dealers all in one condensed list, Stove dealers in another, etc. In most cases, in the Hardware list, are specified the special kind of Hardware handled, as Shelf Hardware, Cutlery, etc.

21 & 23 Centre Street, New York.

BEST AND CHEAPEST
STONE WATER FILTER
ON THE MARKET.
Tripoli Stone Block System.

Set up ready for use. There are two crocks, each of four gallons capacity—an upper one holding the Filter Block, and the lower one, which can be used as a water cooler if desired. This Block is four inches in diameter by the same in height, and is hollowed out on inside. This fits on a metal tube, which fastens by means of a nut to bottom of Filter Jar. Block can be lifted off tube, cleaned and replaced in two minutes, and with no trouble at all. Water passes from outside of block, through the walls, into the hollow chamber, and from thence, by the means of the Drip Tube, into the lower receptacle.

The Finest Piece of Salt Glazed Stoneware Ever Offered the Public.
